CELSUS DE MEDICINA.

VOL. I.

A. COR. CELSI

M E D I C I N Æ

LIBRI OCTO,

EX RECENSIONE L. TARGÆ,

CUM ORDINE VERBORUM,

NOTIS ANGLICANIS,

ET VERSIONE AD VERBUM, QUANTUM FIERI POTUIT, REDACTA.

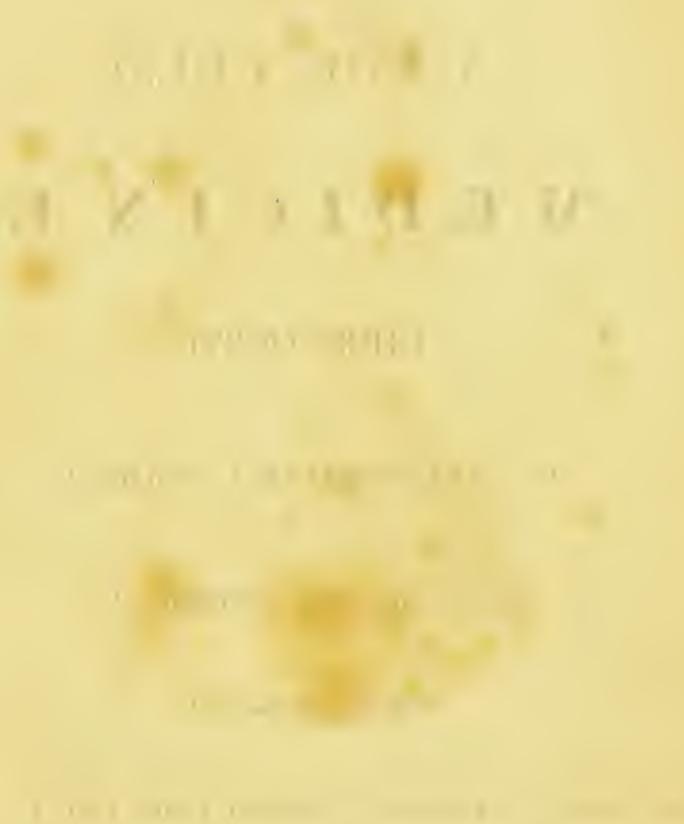

Fig. 1. Scatter plot of the relationship between the number of species (S) and the number of individuals (N) for all 1000 samples.

samples. This is in contrast to the results of the first study, which found no significant relationship between the number of species and the number of individuals.

The results of the second study were similar to those of the first study. The mean number of species per sample was 10.2, and the mean number of individuals per sample was 10,000. The mean number of species per individual was 0.00102.

The results of the third study were similar to those of the first study. The mean number of species per sample was 10.2, and the mean number of individuals per sample was 10,000. The mean number of species per individual was 0.00102.

The results of the fourth study were similar to those of the first study. The mean number of species per sample was 10.2, and the mean number of individuals per sample was 10,000. The mean number of species per individual was 0.00102.

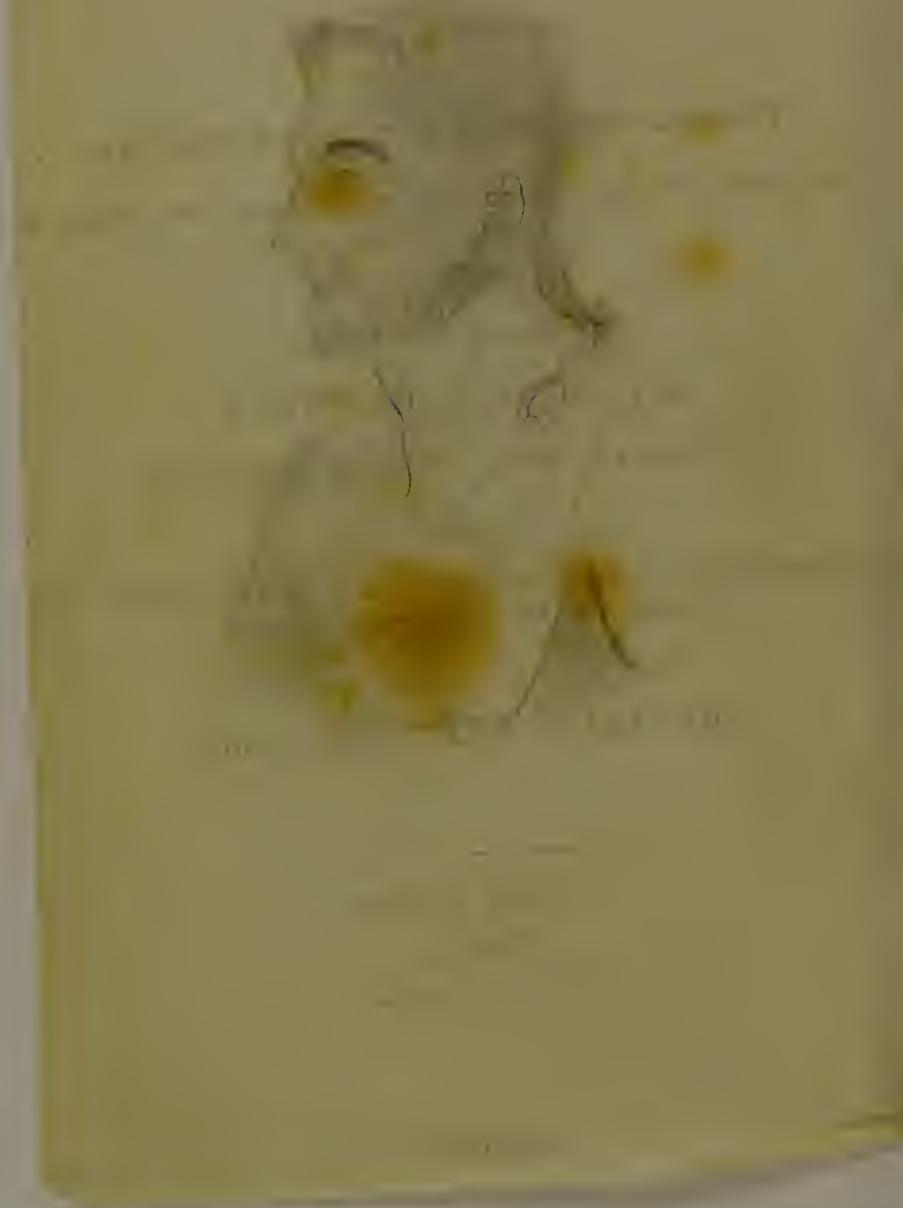

The results of the fifth study were similar to those of the first study. The mean number of species per sample was 10.2, and the mean number of individuals per sample was 10,000. The mean number of species per individual was 0.00102.

VIRO INGENUO,

ARTIBUS MEDICINÆ PERITISSIMO,

NECNON IN OMNI GENERE DOCTRINÆ EXCULTO,

JACOBO BLUNDELL, M.D.

S.

EXISTIMATIO bona est tamquam odor unguenti fragrantis et pretiosi ; neque dubito, quin apud posteros ea tibi sit futura : nam et ingenium et merita tua præcelluerunt, et mihi persuasum est, famam tuam posse durare quamdiu libri et literæ durent. In lucem nunc demum edere mihi visum est hoc opus, et tibi, Vir benevole, libens dedico, ingentis erga me patrocinii testimonium. Scio quantopere bonis artibus faveas, quantum gaudii capias, si studiosi Juvenes aliquid adepti sint, quo facilius medicinam colant. Mitto ergo, ad te Celsum nostrum, auctorem nobilem, et tuas delicias, meâ operâ, (ni fallor) studiosæ juventuti, cui plurimum faves, et gratiorem et accommodatiorem redditum. Tu autem, hoc, qualecumque sit, benigniter accipe. Vale.

A. L.

Dabam Londini,
xiiii^{mo} Augusti, A.D. MDCCCXXXI.

PREFACE.

OUR public Medical Functionaries have very judiciously resolved, that Celsus be prescribed as one of the tests by which the Candidate is to be tried, and I am convinced that this arises from the purest motive, because it is supported by the most unquestionable authorities, both ancient and modern, and by the laudable wish to exact from young gentlemen destined for the medical profession a more respectable and liberal education. The necessity of this enactment may be very evident, since the daily improvement of all the collateral branches of medical science are every where making progress.

It is now several years since I commenced the *Ordo Verborum* of this Work, for the express purpose of facilitating the progress of gentlemen entering on the public service, and I have every reason to believe that it was of no small benefit to them, not only in lessening that *tædium* of study otherwise necessary, but also in enabling them to comprehend the meaning of the Author more fully. The Text copy which I have followed, is that edited by the learned and indefatigable Leonardus Targa, which is universally allowed to be the most correct.

The great responsibility accruing on undertaking a Work of so much labour rendered it a duty incumbent on me to be in possession of every edition that I could possibly procure, particularly those cum Notis Variorum. My principal object in this, was to present the reader with the most approved text of the various editors from Cæsarius in the year 1528, to that of Targa's in 1769; since which no one has attempt-

ed any alterations in the text of Celsus; and I believe for the best of all reasons; since the unwearied perseverance of Targa, united to the most profound learning and great critical acumen, left nothing to be done by future editors. For this reason I have strictly adhered to the text of Targa, making those necessary corrections in the punctuation and unavoidable errors of the press: and here let me add, that my efforts have been very much aided by the excellent management on the part of Mr. Woodfall, the printer of the Work.

With respect to the *Ordo Verborum*, I flatter myself that it will be of no inconsiderable assistance to the student whose classical attainments have been either limited or neglected; at the same time let me caution him who may require the assistance of the *Ordo*, not to omit an assiduous application of his Latin grammar and dictionary; then he will make the *Ordo* subservient to the end proposed; let him use it only if necessary, to unravel the more intricate construction of the text; that being attained, let him despise the *Ordo* for the more elegant and classical arrangement of the text itself, which he ought to read again and again, until he thoroughly comprehend the Author. There is one thing on which I wish to solicit the indulgent consideration of the student: that is, to consider for a moment, the time necessarily employed in arranging this *Ordo* according to the rules of grammar, the tedious, and often difficult task of comparing and correcting it with the text while going through the press: I have done my best to avoid all errors in this department of the Work; but “siquis asperius notare voluerit, reputet modò quantum et varietatis et difficultatis huiusmodi opus amplectitur, et paucis maculis non offendum iri spero.”

I come now to the Translation; which I have endeavoured to render as literal as the idioms of the two languages will admit; and the student will please to observe that the necessary elliptical words are for the most part rendered in *Italics*.

There are three things of the utmost importance in translating from one language to another; the first is to comprehend the original; the second is to convey those sentiments intelligibly to others; and the third is, to write them with precision, fidelity, and elegance, if possible. This is the order of Nature, whose minister and interpreter is man: "Homo, naturæ minister et interpres, tantum facit et inteligit quantum de naturæ ordine revel mente observaverit: nec amplius scit, aut potest."—*Bac. Nov. Org.* Whether I have succeeded or not, is a point that will soon be decided by the judgment of a discerning public, to whose fiat I will implicitly submit. I have endeavoured to render a close interpretation of the Author, and have used my best efforts to infuse the genius and spirit of his style, with as much fidelity as the sententious brevity of this elegant classic would allow. Therefore, under such conditions, I did not even dare to use a freedom of language, far less elegance of style. Even where our Author is evidently wrong, for instance, in his anatomical descriptions, I have preferred to err with him, rather than be right against him: for this very reason, that the student may see Celsus as the faithful representative of medical science in his age, and contrast that with the present improvements: for we are very sagaciously cautioned by Rhodius, that "aplures Latitudinem ejus, quam medicinam fieri oportere." It is gratioris obiectus in hancq; boc Celsus has been received as a standard authority through every successive age; yet we have no other data, except his Treatise on Medicine, by which even his profession can be determined. He is always quoted by the most eminent physicians, as "a model of propriety, ease, and elegance."

Celsus also wrote a Treatise on Military Tactics, another on Agriculture; but commentators are unanimous in their opinions, that his medical writings are the most perfect.

It is very evident from his preface to the first book, wherein he gives an admirable summary of medicine, that he had thoroughly digested the various systems both of the

Greeks and Romans before his time. In the midst of this conflicting mass of facts adduced by the empirics on one side, opposed by the no less powerful arguments of the rationalists on the other, he was the first who united the theory of the one with the practice of the other. It is interesting to see the energies of such “a mind grappling with the difficulties which surrounded it.” Cicero exclaims that “*Homines ad Deos in nulla re propius accedunt, quam salutem hominibus dando.*” Celsus may well be called the morning star of medical science “last in the train of night;” and it need not surprise us that a certain portion of the darkness of that age should still cling around him. But the investigations of subsequent ages have advanced with gradual but progressive steps to verify that sublime conception, that “**TRUTH**, though hewn, like the mangled body of Osiris, into a thousand pieces, and scattered to the four winds of heaven, shall be gathered limb to limb, and moulded, with every joint and member, into an immortal **FORM** of loveliness and perfection.”

After he has given an abstract of the prevailing systems up to his time, he very modestly advances his own opinion, proposes the plan of his Work, the four first books of which are on Diet; the fifth and sixth on Pharmacy; and the last two appropriated to Surgery. Targa has followed the usual division of the Work into chapters, but rejected the marginal contents, which I have added to each chapter from Linden’s edition. The Life of Celsus I have taken from Rhodius, published by Almeloveen. I am indebted for one of the Tables of Weights, and some of the Notes, to that splendid and very correct edition by Dr. Milligan, of Edinburgh: the other two I have taken from the translated copy of Dr. Grieve, who selected Almeloveen’s text for his translation, which contains innumerable errors, afterwards corrected by Targa. Mr. Underwood, I believe, is the next translator, on the interlineal plan, and has executed his ungracious task in a very creditable manner, as far as I have seen of it, which

was the first volume only. About the same time appeared Dr. Collier with his Celsus in four volumes. There is also another edition from a Parisian press in 1824, which I consider as a duty to my countrymen to mark out in the language of Horace—

“ Fœnum habet in cornu, longe fuge !”

The Notes explaining pharmaceutical preparations, &c. will be found at the end of the second volume, and for which I am indebted to Pliny, Dioscorides, Quintilian, Pantin, Casteli Lexicon Medicum Græco-Latinum, Targa, Morgagni, Greive, and Milligan.

THREE CROWN SQUARE, SOUTHWARK,
August 13th, 1831.

AURELI CORNELII CELSI

VITA

A CLARISSIMO VIRO

JOANNE RHODIO CONSCRIPTA.

CORNELII CELSI laudabilem in re medica operam annis jam mille sexcentis, et quod superat, experientia, veritatis prima parens, feliciter probavit. Nec melioris animi quisquam ita ab omni humanitate remotus fuit, cui non venerandum tam illustre nomen. At ingenio magis, quam origine notum, quam, relicta soli animo gloria, temporis diuturnitas posteritatis memoriae exemptit.

Quamvis enim Romæ vixisse Celsum, ipsius, sive ut aliis visum, Scribonii Largi ad J. Callistum epistola indicio sit: non desunt tamen causæ, cur addubitem, patria, an jure civitatis ipsum Romanis accenseam.

Maximeque, quum præter hunc, quidam Julius Celsus Hadriano Imperatori à consiliis; vel ex aliorum sententia, Alexandri Severi temporibus, juris scientia perhibetur claruisse. Vid. Spartianum in Hadr. 30. et Pompon. JC. lib. 2. in fin. de Orig. Jur. et Politianum lib. 5. Epist. ad Jac. Modestum. Evidem Celsum patrem ac filium jureconsultis annumerat Hotomannus in descriptione Jurisconsultorum, et Juventium Celsum patrem ad Vespasiani Imperatoris tempora refert Jacob. Gothofred. Histor. Jur. Civil. cap. 7. de Jurisconsultorum Successione. Idem Celsum

THE LIFE
OF
AURELIUS CORNELIUS CELSUS,

WRITTEN BY THE CELEBRATED J. RHODIUS.

TRANSLATED FROM ALMELÖVEEN'S LUGDUNI BATAVORUM
EDITION OF 1746.

THE writings of Aur. Cor. Celsus on Medicine have stood the test of experience, the first parent of truth; for upwards of sixteen hundred years. Nor can there be any one of a more exalted mind, or of a more cultivated understanding so far removed from all good learning, as not to venerate so great a name: more distinguished, indeed, by the greatness of his genius, than by an illustrious origin, of whom any certain knowledge has been lost to latter ages through the lapse of time, and his fame left to depend on the excellence of his mind alone.

Although it might appear from a letter of his own, or as some maintain, of Scribonius Largus to Callistus, that Celsus lived at Rome, reasons are not wanting why I should hesitate to acknowledge him a Roman either by birth or right of citizenship.

In the reign of Hadrian, or according to others, in the time of Alexander Severus, besides the subject of this memoir, there appears to have been a Julius Celsus who excelled as a jurisconsult: see Spartianus on Hadrian, 30, and Pomponius the jurisconsult, in the end of his second book concerning the Origin of Lawyers; also, Politianus, book fifth, in his letter to J. Modestus; and indeed Hotmannus mentions a Celsus both father and son of a lawyer, in his description of Jurisconsults, and Gothfred, in his History of the Jur. Civ. cap. 7., on the succession of Jurisconsults, refers Juventius Celsus to the reign of the Emperor

patrem et filium sub Trajano, Hadriano, Antonino Pio vixisse censem. Verum et Apulejus Celsus Valentis ac Scriboni Largi in Medicis Magister occurrit apud Scribonium Largum de Compos. Med. eap. 94. et 171.

Cujus praeter Agricolam Woverius in Apuleji Vita mentionem injecit; nisi fortè cum Cornario in Marc. Empirici Præfat. interposito inciso, Apulejo, Celso, distinctè legendum fuerit. Ita in præfat. Marcell. et Apulejus et Celsus occurrunt.

Volaterranus etiam meminit in Anthropologia, lib. 14. Celsi cuiusdam, qui Philosophiæ Stoicæ sectator, Origenis erat adversarius, magiæ scientia notus, cui Lucianus Pseudo-Mantem inscripsit. Ejusdem quoque nominis ibidem, imperante Nerone, è Galliis puer novennis martyrio nobilitatus.

Nomo etiam innotuit apud Augustin. Dialogo 5. de Num. Celsus quidam III. Vir. Noster autem Augusti ævo floruit, ex quorundam sententia, inter quos Jo. Britanic, in Juvenal. Sat. 6. et 7. Ovidii auctoritate, vel ut Jo. Cajo plaeuit, Cl. Tiberii, a.c. 29.; aut certe Caji Imp. conjectura Sambuci, viri antiquitatis notitia clarissimi. Major tamen eruditorum pars sub Tiberio vixisse, vel fortè ipso imperante natum usque ad Trajani tempora vitam produxisse eensem; quanvis et sub Nerone vixisse putet Thom. Fienus. Ut uno seculo vetustior Galeno videatur.

Cæterum, non levem hic de patria ejus dubitandi oeeasionem præbet Cæl. Rhodiginus, qui Antiq. Leet. lib. 14. eap. 5. Veronenses, ait, cum Macrobio, Vitruvio, et Plinio, Celsum quoque suum ortu civem agnoseere. Librorum inscriptionibus hujusmodi divinationes stabiliri assolent. Sed exigui momenti munimento. Notius enim est, quām ut pluribus confirmetur, librorum titulos literatoribus et librariis arbitrarios fuisse, vixque veterum quempiam ulli suorum commentariorum quidquam prænotasse, referente de semet idipsum Galeno, lib. 7. Method. Med. cap. 1. qui id officii ab

Vespasian. The same author thinks that Celsus, the father and son, lived under Trajan, Hadrian, and Antoninus Pius. But Apuleius Celsus, a Valentian, and tutor to Seribonius Largus, is mentioned by him in his book, entitled, *Compositio Medicinæ*, cap. 94, et 171.

Besides, Agrieola Woverius makes mention of him in his Life of Apuleius; unless, perhaps, with Cornarius, in his preface to Mar. Empiricus, we are to read separately Apuleius, Celsus with the interposition of a eomma. Also in the preface to Mareellus both Apuleius and Celsus occur.

Volaterranus likewise takes notice of a Celsus in his *Anthropologia*, lib. xiv., who was a follower of the Stoic philosophy, and an adversary of Origen, a noted magician, to whom Lucianus gave the name of the Lying-prophet. In the reign of Nero, also, there was a boy, nine years of age, of the same name, a Gaul, renowned for his martyrdom.

There is another mentioned by Numus, in his *Augustine Dialogues*, of the name of Celsus, a triumvir. But our Celsus flourished in the Augustan age, as some imagine, as appears by J. Britannicus on Juvenal, Sat. 6, and 7. and on the authority of Ovid, or as J. Caius would have it in his *Annals of Clem. Tiberius, Anno Christi 29*, or at least under the Emperor Caius, as Sambucus conjectures, and these men are celebrated for their knowledge of antiquity. Yet the greater number of the learned think that he lived in the reign of Tiberius, or perhaps, being born in his reign, he might have prolonged his life to the time of Trajan: although Thomas Fienus imagines that he lived under Nero, and appears to be one age older than Galen.

Again, Cael. Rhodiginus *Antiq. Lect.* lib. xiv. e. 5., advances no light arguments tending to remove all doubt of his country; he says that Verona claims Celsus as one of her citizens by birth, along with Maerobius, Vitruvius, and Pliny. By the inscriptions of books, conjectures of this kind used to be solved: but this is a confirmation of very little importance: for it is better known than to require the confirmation of many, that the titles of books greatly depended on the caprice of printers, and librarians, and that scarcely any of the ancients prefixed their names to their works, as related by Galen, speaking of himself in his *Methodus Medendi*, lib. vii. eap. 1., who left that duty to be performed by

amicis habuit : haud dubiè istius ævi modestia, quod ingenia admiratione superiora protulit.

Sed enim, ut mala exempla ex bonis initiis orta : ita ex æmula, in conquirendis magnorum ingeniorum monumentis, principum munificentia, accrescente paulatim librariorum avaritia, omnes propè optimorum etiam Auctorum præscriptions impunè, ad lucrosam cujusque libidinem, immutatae, ne dicam adulteratæ.

Atque ut ad Celsum redeam ; quot ejus hodie editiones, tot ferriè inscriptiones diversæ. Cæsarii habet, "Aurelii Cornelii Celsi de Re Medica VIII. Libri eruditissimi." Vulgatæ Lugdunenses omnes, et Leidensis modestiùs sine phalerato encomio A. C. C. D. M. L. VIII. Horum priorem Cajus sic mutavit : "Aurelii Cornelii Celsi Romani de Re Medica Libb. VIII. pererudit." H. Stephanus in suo exemplari cæteris Medicinæ Principibus adjecto receptæ lectioni subdidit :

"Operis ab eo scripti Pars Sexta." Vett. Codicum MS. auctoritatem secutus, quibus communis hæc inscriptio : "A. Cornelii Celsi Artium Liber VI." Nihil tamen hic præter consilium et rem ab illo temerè factum. Patriam enim sive auctor ipse, sive aliis quispiam addiderit, id certè non caret vetustatis exemplo, potissimum apud Græcos, quos inter Celsus sibi "Hippocratem Coum" in primis imitandum proposuit, cuius etiam pleraque non infeliciter Latino sermone reddidit, suam ipse testatus in Epist. ad Pullum Natalem, in hoc studiorum genere diligentiam, longè accuratiorem, quam Largii Designatiæni, qui Epistola ad filios se fuisse liberiorem fatetur.

Quemadmodum notante Cornario in Dedicat. Marcelli, in plerisque Hippocratem expressit, ut integras sententiarum periodos ex ipso descriptas subinde in eo videas ; imò tota capita nihil aliud quam Hippocratis sententias ad verbum reddunt. Hinc non immerito Hippocratis Simiam dixit Nic. Monardus, de V. S. in Pleurit. f. 8.

Etsi verò Latini scriptores patriam haud usque jacta-

his friends : this may be attributed, without doubt, to the modesty of that age, which encouraged superior talent by its admiration of genius.

But sometimes bad results arise from good examples, so, through the emulation excited in searching for the works of great geniuses, the cupidity of librarians, fed by the liberality of princes, gradually increased until almost all the best authors had undergone a change of title, nay, I may say, were adulterated without detection, by the cupidity of each party vying with another for the sake of gain.

But to return to Celsus : almost every edition of his work now has a different title. That by Caesarius has “Aurelii Cornelii Celsi de Re Medica Libri VIII. eruditissimi.” All those published at Lyons and Leyden have none of that encomiastic fanfaronade : they are more modest, such as A. C. C. D. M. L. VIII., The first of which Caius changed into Aurelii Cornelii Celsi Romanii de Re Medica Lib. VIII., edited by the very learned H. Stephanus, who, in his other works on the Principles of Medicine, supplied to the received reading as follows: “A. Cornelii Celsi Artium Liber VI. Operis ab eo Scripti :” in which he followed the authority of an ancient manuscript with the usual inscription on it. Neither has he done this unadvisedly, nor without foundation. As to the word “patria”, whether the author himself added it, or some other person for him, it certainly does not want a precedent among the examples of antiquity, especially among the Greeks, whom Celsus made it a point to imitate, particularly Hippocrates of Cos, most of whose works he rendered very elegantly into Latin. He himself testifies his diligence in this kind of study, in a letter to Pullus Natalus, far more correctly than that of Largus Designantianus, who in a letter to his sons confesses himself to have been too free in this affair.

In the same manner Cornarius remarked in his dedication to Marcellus, that he imitated Hippocrates for the most part so close, that sometimes you may see whole periods of sentences described by the one, transcribed by the other, nay, whole chapters which relate nothing else than the opinions of Hippocrates verbatim. Therefore it was not without reason that Nic. Monardus called him the Ape of Hippocrates, in Venesection in Pleuritis. f. 8.

Although it may be true that the Latin authors of anti-

bant: nentiquam tamen diffitendum, antiquitùs Romanæ civitatis jus gloriosum fuisse. Quo fortè venditores Auctorem nostrum commendare satagebant; sive is meritis et gratia civium numero adscriptus esset; sive Roma oriundus. Posteriorius tamen ut credam, suadet præter apertum Auctoris textum, Epistola ejusdem ad Callistum, et persuadet ad Pullum Natalem altera; in quibus in primis Viri boni genius conspicitur.

Imò Marcellus in Praef. Operis Cornelium Celsum inter viros illustres et cives enumerat, quicquid ei imposuerit Verderius Cens. Ejus Columella, Claudi tempore clarus, ut æqualis aut certè paulo superioris, sic meminit:

“ Nostrorum temporum Cornelius Celsus, totum corpus disciplinæ quinque libris complexus est.” Quem Rusticam intellexisse, vero proximum est. Quintiliani sententia Inst. Orat. lib. x. cap. 1. is “ Vir eruditus, inter eos philosophos Latinos, quos eloquentes literæ Romanæ tulerunt, qui scripsit non parum multa, scepticos sequutus, non sine cultu et nitore.” Ideoque ob nimiam novitatis cupiditatem, ejusdem censura notatur.

Scripta ejus sigillatim prodidit Volaterranus Anthropol. “ Cornelius Celsus mediocri vir ingenio, non solum artem Rheticam, sed de Re Militari, et de Rusticana, deque Medicina libros composuit.” Quæ omnia J. Dousa, æternum gentis et generis sui decus, in Sylva Extemporal. hoc Epigrammate venustissimè complexus:

“ Facta urbana tuo Res Rustica munere, scriptis
Nec minus illustris est Medicina tuis.
Hinc quoque Militiae tractâsti commoda rhetor,
Hoc Martem musis jungere, Celsc, fuit.”

Subjungit Polyhistor Italus: “ Ad nos tantum ejus Medicina pervenit oratorio more conscripta.” Sed et quædam rhetorica ejus nostra ætate Sixti Popmæ studio feruntur emissæ. Veterinariam quoque conscripsisse auctor est Mercurialis lib. iv. cap. 2. Herbarium verò ei adscriptum, Apuleji potiùs credit in vita Apuleji Elmenhorstius. Julium qui-

quity did not boast of their country, yet it cannot be denied, that the right of Roman citizenship was a great honour. Perhaps the booksellers might have interested themselves in commanding our author, whether enrolled in the number of citizens, by merit and favour, or a Roman by birth. Yet I am inclined to believe the latter, as it is evident from the text of that author in a letter of his to Calistus, and in another to Pullus Natalis, in both of which the genius of a great man is chiefly to be seen.

Nay, Marcellus in the preface of his work mentions Celsus among other distinguished citizens, whatever had been imposed upon him by Verderius, the Censor. Columella, an illustrious man in the reign of Claudius, either cotemporary or at least a little before him, mentions him in the following manner :

“ Cornelius Celsus in our own time has comprehended the whole body of literature in five books.” But he is to be understood as alluding to his book on agriculture or rural affairs. Quintilian, Inst. Orat. lib. x. c. 1. speaks of him thus : “ That learned man amongst the Latin philosophers, whom Roman literature had brought forward, and who wrote many things after the manner of the sceptics, with ease and elegance.” For this reason he came under the censure of the same author, from too great a desire of novelty.

Volaterranus in his Anthropologia, who published his works separately, thus speaks of him : “ Cornelius Celsus, a man of tolerable genius, has written, not only a system of rhetoric, but also composed books on military and rural affairs, and on medicine.” All of which Dousa, who is an honour to his country and species, has most pleasantly comprised in the following epigram :

“ Facta urbana tuo Res Rustica munere, scriptis
Nec minus illustris est Medicina tuis.
Hinc quoque Militiae tractasti commoda rhetor,
Hoc Martem musis jungere, Celse, fuit.”

A work entitled “ Polyhistor Italus” subjoins this notice of him : “ His work on medicine, written in an oratorical style, has only reached us.” But something ascribed to him on rhetoric has been brought forward in our own day by the industry of Sixtus Popma. Mercurialis says, lib. iv. cap. 2., that he wrote a Treatise on Veterinary Medicine. But Elmenhorstius, in his life of Apuleius, thinks that the Herbarium ascribed to him, rather belongs to Apuleius.

dem Celsum inter rei militaris scriptores enumerat Rob. Valtur. quemadmodum huic à nonnullis adscripta sunt Julii Cæsaris Commentaria. De quibus tamen nihil verè constat.

Varia sanè ejus eruditio aliud prodere non potest, quām Virum ingenuè natum, magna seculi felicitate, quod bonarum literarum erat feracissimum. Excepit nempe coluitque cætas Viros scientia, prudentia, ac eloquentia summos, Tullium, Sallustium, Catullum, Virgilium, Propertium, Horatium, Tibullum, Manilium, Vitruvium, Antonium Musam, Ovidium, Livium, Seribonium Largum, Valerium Maximum, Vellejum Paterulum: atque si se in Claudii imperium ipsius extenderit vita, Quintum Curtium, Persium, Senecam, Silium Italicum, Plinium, viros omnes consummatissimos, in quibus tamen postremum nonnulli Celso juniores censem.

Opinionem meam firmat laudabilis veterum consuetudo, qua tria nomina nobiliorum, Celso etiam Plinii auctoritate rata; Libertis raro, nec fermè sinc gravi causa unquam concessa scimus, quibus tamen semper servile nomen remansit. Nec moror, quòd Celsi Epistolæ apud Marcellum in limine operis prænomen desit, quo soli Romani insigniebantur. Nomen enim apud bonos auctores sæpe prænomen et cognomen includit. Hinc Martialis:

“ Ut jugulem curas, nomen utrumque bibam.”

Salutaribus itaque disciplinis Græcisque literis, non levi nobilitatis indicio, rectè institutus, facile potuit seculo tam augusto ac beato, nihil non (ut ipse in Epistola ad Natalem refert) dignum sublimi Romanorum majestate de bono Medicinæ artis splendidissimè scribere, idque perennitati et literis mandare, utilitatis magis quām delectationis causa.

Scio equidem, non deesse multæ auctoritatis viros, qui ex modò adducta Celsi epistola opinantur, ipsum animo in diversa studia diviso, Græca duntaxat medicinalia in Latinum convertisse, aut Empedoclis et Democriti exemplo non ut

Robertus Walturius indeed ranks Julius Celsus among those who wrote on military affairs, and some even ascribe to him the Commentaries of Julius Cæsar ; concerning which there appears no reasonable argument.

That he was learned on many subjects there can be no doubt ; but that proves nothing, except that he was sprung from a respectable family, and born in an age most fruitful in the production of great and learned men, an age indeed which produced and reared the greatest men in literature, philosophy, and eloquence. Cicero, Sallust, Catullus, Virgil, Propertius, Horace, Tibullus, Manilius, Vitruvius, Antonius Musa, Ovid, Livy, Scribonius Largus, Valerius Maximus, Velleius Paterculus ; and if we extend his life to the reign of Claudius, there were Quintus Curtius, Persius, Seneca, Silius Italicus, Pliny, all of whom were men of the most consummate learning, the last of whom is considered by some to be younger than Celsus.

That laudable custom among the ancients strengthens my opinion, by which the three names of nobility, on the authority of Pliny, were conferred on Celsus ; for we know they were hardly ever allowed to freed men, except on some very particular occasion, to whom the servile name always remained. Nor do I doubt it, because in that letter which Celsus wrote to Marcellus, the prænomen, by which the Romans alone were distinguished, was not inserted at the commencement of the work. For the name among reputed authors often includes the name and surname. Hence that epigram of Martial :

“ Ut jugulem curas, nomen utrumque bibam.”

We have the most indubitable proof of his nobility, by being so well instructed, and that too in Grecian literature, (as he himself observes in his letter to Natales,) that he could write with facility on the theory and art of Medicine in a style not unworthy of the majestic sublimity of a Roman even in the Augustan age, not for the pleasure of an empty name, but for the sake of future ages and the cause of literature.

Indeed I am aware, that there are not wanting men of authority, who argue from that letter, that his mind being directed to various studies, he only translated those Greek Medical works into Latin after the example of Empedocles and Democritus, not as a professed physician for gain, but

merus atque ad quæstum medicus, sed ut sapientem, atque, ut Columellæ verbis utar, universæ naturæ prudentem, medicinam veluti philosophiæ partem cum sapientiæ studio conjunxisse. Ideoque nec factam ejus ab Aureliano mentionem, Barthio Adv. lib. xxxviii. cap. 3. censente. Nec denique unquam medicinæ operatum. Credat qui volet. Nec eam item meam facio.

Medicum certè agnovit magnus Scaliger. Remedia quidem, Hippocratis et Galeni exemplo, aliunde congesta digessisse, ultrò largior, ipsam verò morborum *τέκμαρσιν* et *θεραπείαν* proprio ingenii ductu contextam pro me res ipsa loquitur. Quin ipsum pharmaca præbuisse, non mediocri gloria, ex ipsius ad Julium Callistum epistola satis liquet. Quorum artificiosam misionem se accuratè intellexisse prodit ipse lib. vii. cap. 26. Unde Cornarius fortassis inter pharmaceuticos reposuit. Imò dedita opera ab aliis prætermissa proferre ac illustrare voluisse censuit Minadous, variæ eruditionis medicus.

Maximèque medicum ejus chirurgica probant, quæ Gesneri in Catalogo Chirurgorum sententia, veterum solus Latinè scripsit, ut verè ipsum inter Chirurgos reponat doctissimus Septalius. Tanta verò id fide peregit, ut Hieronymus ab Aquapendente, medicus et chirurgus usu vel annis nemini secundus, in Operat. Chirurg. cap. de Chir. Dent. his verbis sese in ipsius laudes diffuderit: “ Mirabilis Celsus in omnibus: quem nocturna versare manu, versare diurna, consul.”

Nec mirum: quum Celsus eruditissimo Manardo Epist. Medic. lib. ix. Epist. 1. bonus et fidelis Hippocratis interpres, licet in aliquo verbo quandoque lapsus videatur. Quod viro in omni literarum genere exercitato vel ipsa *πολυγραφία* libenter profectò condonari jubet, quamvis non diffiteatur ipse non pauca se ex aliena quandoque sententia posuisse.

Horatio pariter Augenio de Miss. Sanguin. lib. viii. Lomnio, Ronsseo, Schenckio, Jo. Heurnio, Bened. Mata-moro, Rod. à Castro, innumerisque præclari judicij medicis, propter singularem et succinctam cum elegantia doctrinam, Latinus Hippocrates appellatur, in quo Pantini judicio Com-ment. ad Celsi lib. i. cap. 1. optimæ methodi ac viæ ra-

as a philosopher, and that I may use the language of Columella, “ being skilled in natural philosophy, he joined that to medicine.” Neither do I yield my assent to the opinion of Aurelian, Barth. Adver. lib. xxxviii. c. 3., and finally, “ that he never practised medicine, let him believe it who will; I will not dispute about it with him.”

The great Scaliger certainly acknowledges him to have been a physician; and that he dispensed medicine after the manner of Hippocrates and Galen is very evident to me, but that he prepared his doses by his own judgment and the symptoms of the disease. It is also very clear from his own letter to Julius Callistus, that he practised pharmacy with great success; and that he perfectly understood the art of compounding drugs, he himself gives a sufficient proof in lib. vii. c. 26. from whence Cornarius perhaps ranks him among druggists. Minadous, indeed, a physician of extensive learning, says that he lent his aid in bringing forward and illustrating neglected works which had been written by others.

His surgical works certainly prove him to have been a physician, which, in the opinion of Gesner in his Catalogue of Surgeons, he alone of the ancients wrote in Latin. The very learned Septalius also places him among surgeons: which art he practised with so much skill, that Hieronymus ab Aquapendente, a physician and surgeon, second to none either in theory or practice, speaks of him in this manner:—“ Celsus! admirable in all things, whom I peruse day and night.” Opera Chirurg. Cap. de Chir. Dent.

Neither is it surprising that the very learned Manardus should quote him in such high terms, Epist. Med. lib. ix. epist. 1, as a good and faithful interpreter of Hippocrates, although in some words he may be supposed to have erred, which he willingly admits may be excused in a man engaged in such a variety of literary pursuits, and even of writing; although it cannot be denied that he advanced many opinions of his own.

Horatius, together with Augenius, on blood-letting, lib. viii., Lomnus, Ronsseus, Schenckius, Heurnius, Bened. Matamorus, Rhodius of Cleves, and innumerable other physicians of eminent learning styled him the Latin Hippocrates, on account of his extraordinary learning joined to such purity of language, that in the judgment of Pantinus in his Commentaries on Celsus, lib. i. cap. 1, “ the best method of

tionisque docendi descendique, et in summa brevitate mira artis et sapientiae observatio plerunque animadvertisatur.

Rectè igitur Agricola de Pond. Rom. lib. iv. "Celsi," inquit, "auctoritas medicis nota est, aut saltem esse debet." Quam elegantissimis verbis Cælius Rhodiginus Antiq. Lect. lib. xxvi. cap. 3. insinuavit: "A Cornelio Celso versoram faciunt multi. Verùm citra illius sententiam nihil fermè promunt; perinde ac verba sint veterum sacrorum, quæ demutasse piaculare flagitium planè censeri debeat, quodque hostiis majoribus procures."

Inde Fernelio, Franciæ Hippocrati, referente Plautio in Vita Fernelii, cùm ob orationis puritatem, tum ob sententiarum pondus, quām charissimus fuit. Verùm, ne nimiis laudibus verius is oneretur, quām ornetur, quem mortalium nemo rectè vituperavit: unicum Heurnii judicium, inter cetera gravissimum, huic virtutum coronæ lemnisci loco satis erit.

Ita ille Meth. Stud. Med. cap. 5. "Latinos inter medicos primus est Cornelius Celsus: sed prudenter legendus. Nam in multis Asclepiadem Methodicum sectatur, ut fatetur ipse. HUJUS COTE STYLOM SUBIGEMUS, ET PLURIS LATINITATEM EJUS QUAM MEDICINAM FACIEMUS." Unicus itaque Celsus, ut scitè idem in Epist. ad Ronss. Celso, præfixa, medicis Latinis præferatur: qui pomœria Romanæ eloquentiæ eò protulit, ut medicina suavissimo ore eloquentiæ jam sese cultioribus ingenii merito commendet.

His quotquot naturæ associavit benignitas, æquos adferte animos, eleganti favete linguae. Ita vobis, et verum animi sermonisque cultum, et firma valetudinis præsidia parabitis. Tantum est.

"Optandum est, ut sit mens sana in corpore sano!"

teaching, the most rational plan of learning, with the most extreme brevity of art and science, pervade the greater part of his work."

Therefore Agricola, in his *Ponder. Romanorum*, lib. iv. very properly remarks, that the AUTHORITY OF CELSUS IS, OR OUGHT TO BE KNOWN TO ALL MEDICAL MEN. Cælius Rhodiginus has exclaimed in the most forcible language, that many depredations have been committed on the fame of Cornelius Celsus, but, with the exception of promulgating his opinions to the world, they have elicited nothing of their own; they have mangled or sophisticated those sacred records, which crime ought to be deemed a sacrilegic, and should be expiated by retributive atonement proportioned to the deed.

Hence Plautius in his life of Fernelius, the French Hippocrates, mentions him in the most complimentary manner, not only for the purity of his language, but also for the solidity of his opinions. But lest we should overrate his excellencies in our zeal to display his genius, which no one has blamed with propriety; let us add the opinion of Heurnius, who assigns a crown of virtue to him rather than a garland of flowers.

The same author, in his *Study of Medicine*, says, chap. 5, that Celsus is the first of Latin physicians, but he must be read with caution, for in many things he followed the method of Asclepiades as he himself confesses. THEREFORE ON HIS MODEL LET US FORM OUR STYLE, AND ADMIRE HIS LATIN MORE THAN HIS MEDICINE. We have the same opinion prefixed in a letter to Ronsseus' edition of Celsus, wherein he says, "We should prefer his Latin to his medicine, for he has deservedly obtained the highest station in Roman literature by his work, so that the study of medicine may now recommend itself to the man of genius in the sweetest strains of eloquence."

Therefore let that felicitous association, in youth, be united to an unbiassed mind, and cultivate the elegance of his language. So that by these means they will ensure for themselves the most valuable improvement both of mind, language, and the safest remedies for the recovery of health. I must finish, "with the sincerest wish, that you may always possess a sound mind in a vigorous frame."

							0	0 0 1

Note 1. The Romans divided all integers, as they did their As, into twelve equal parts called unciae; thus—

- SEXTANS = was equal to the sixth of an As, or two unciae.
- QUADRANS = was equal to one-fourth, or three unciae.
- TRIENS = was equal to a third part, or four unciae.
- SEMIS = was equal to one-half, or six unciae.
- BES = was equal to two-thirds, or eight unciae.
- DODRANS = was equal to three-fourths, or nine unciae.
- P . . . = this joined to any other mark signifies by weight.
- P . , per se = signifies a pound.
- X . . . = to one denarinis.
- = non per se = nearly the sixth of a drachm.
- = . . . = to two sextans.
- , . . . = to one sextans.
- . . . = to one-half of a sextans.

The weights of all these differ, as the INTEGER may be the LIBRA, the UNCIA, or DENARIUS, which the attentive reader can easily calculate if he be so disposed, observing that they are not to be taken for aliquot parts of the denarius, but of the preceding mark. The nature of the composition and the character prefixed will be the best explication.

Note 2. The mark for the Denarius was originally X or * containing ten small asses. This was confounded by the transcribers with x being equivalent to ten Denarii: so that after all the labour of critics and commentators, the proportions are irrecoverably lost in several formulæ, and for this reason I have followed the example of later editers in affixing an arbitrary mark thus X.

Note 3. The characters for quantities are variously marked in different editions, and the same character has several values affixed on it. There is one of this uncertainty in Celsus, that is Z., which we are informed by Rhodins in his Treatise on the Weights and Measures of Celsus, expresses the Libra, the SESCUNCIA, the Sextans of a pound, the Denarius and the Sextans of a Denarius. Which of these different values it bears must be determined by the connection. When it follows the mark of a Denarius, it can mean no more than the Sextans of a Denarius.

Note 4. P. stands for PONDO, which is an indeclinable word, and when joined with NUMBERS signifies a pound: when with other WEIGHTS, it is equivalent to PONDUS or weight in general. The very accurate and learned antiquarian, Greaves, from repeated experiments, computed the Roman Denarius to contain 62 grains English Troy weight, from which the proportions of the other weights are determined. The Roman Foot is computed at 11.604 inches, which is the standard of capacity. The Manipulus was equal to 120 gr. The Pngillus, as much as may be taken up in three fingers was computed at 30 gr. The Amygdala with its shell 30 gr. The Amygdala decorticated 10 gr. Egyptian Bean 20 gr. The Common Italian Bean 10 gr. Gramum Piperis 2 gr. The Nux Juglandis 120 gr.

THE FIRST BOOK

OR

AURELIUS CORNELIUS CELSUS

ON MEDICINE.

PREFACE (1) (a).

As agriculture provides aliment to the sound body, so medicine does health to the sick. Indeed, no part of the world is without this art. For the most uncultivated nations know the properties of herbs, and other prompt remedies for wounds and diseases. But it was cultivated by the Greeks, a little more than other nations, yet not even by them from the origin of that people, but a few ages before us; as it would appear Æsculapius is celebrated as their most ancient author, who, because he cultivated this art, bitherto rude and barbarous, a little more skilfully, was received into the number of their gods. Afterwards, his two sons, Podalirius (2) and Machaon, having followed their general, Agamemnon, to the Trojan war, did not

(a) The numbers (1), (2), (3), &c. refer to Notes at the end of the volume.

non mediocrem opem commilitonibus suis attulerunt. Quos tamen Homerus non in pestilentia, neque in variis generibus morborum aliquid attulisse auxilii, sed vulneribus tantummodo ferro et medicamentis mederi solitos esse, proposuit. Ex quo apparet, has partes medicinæ solas ab his esse tentatas, easque esse vetustissimas. Eodemque auctore disci potest, morbos tum ad iram deorum immortalium relatos esse, et ab iisdem opem posci solitam. Verique simile est, inter nulla auxilia adversæ valetudinis, plerumque tamen cam bonam contigisse ob bonos mores, quos neque desidia, neque luxuria vitiarant. Siquidem hæc duo corpora, prius in Græcia, deinde apud nos affixerunt. Ideoque multiplex ista medicina, neque olim, neque apud alias gentes necessaria, vix aliquos ex nobis ad senectutis principia perducit. Ergo etiam post eos, de quibus retuli, nulli clari viri medicinam exercuerunt; donec majore studio litterarum disciplina agitari cœpit, quæ ut animo præcipue omnium necessaria, sic corpori inimica est. Primoque medendi scientia, sapientiae pars habebatur, ut et morborum curatio, et rerum naturæ contemplatio sub iisdem auctoribus nata sit: scilicet iis hanc

TRANSLATION.

render little assistance to their fellow soldiers. But Homer has represented that they did not attempt to cure pestilence nor various other kinds of diseases, but were in the habit of dressing wounds by the knife and medicines only: by which it appears, they were accustomed to treat surgical cases only, and that this was the most ancient. It may be learned from the same author, that diseases were then ascribed to the anger of the immortal gods, and it was usual to implore their aid. It is also very likely, that as there were but few remedies known for sickness, yet for the most part it happened that men enjoyed good health from the simplicity of their morals, which neither idleness nor luxury had vitiated. Since, indeed, these two vices, first in Greece, then among us, have greatly exerted their baneful influence on the human frame. Hence, that multiplied variety of remedies, unnecessary in ancient times and even now among other nations, can hardly support any of us to the first stages of old age. Therefore, after those whom I have mentioned, few men of eminence practised medicine until learning began to be prosecuted with greater ardour, which, as it is of all things most necessary to the mind, so it is equally injurious to the body; and, at first, the science of healing was esteemed a branch of philosophy, as the cure of diseases and the study of the laws of nature had their origin under the same masters; which may be supposed from those chiefly

maxime requirentibus, qui corporum suorum robora quieta cogitatione, nocturnaque vigilia minuerant. Ideoque multos ex sapientiae professoribus peritos ejus fuisse accepimus; clarissimos vero ex iis Pythagoram, et Empedoclem, et Democritum. Hujus autem, ut quidam crediderunt, discipulus Hippocrates Cous, primus quidem ex omnibus memoria dignis, ab studio sapientiae disciplinam hanc separavit, vir et arte et facundia insignis. Post quem Diocles Carystius, deinde Praxagoras et Chrysippus, tum Herophilus et Erasistratus sic artem hanc exercuerunt, ut etiam in diversas curandi vias processerint. Iisdemque temporibus in tres partes medicina diducta est: ut una esset, quae victu; altera, quae medicamentis; tertia, quae manu incederetur. Primam διαιτητικὴν, secundam φαρμακευτικὴν, tertiam χειρουργικὴν Græci nominarunt. Ejus autem quae victu morbos curat, longe clarissimi auctores etiam altius quædam agitare conati, rerum quoque naturæ sibi cognitionem vindicarunt, tamquam sine ea, trunca et debilis medicina esset. Post quos Serapion, primus omnium, nihil hanc rationalem disciplinam pertinere ad medicinam, professus, in usu tantum et experimentis eam posuit. Quem Apollonius et

reutibus maximè hanc, qui minuerant robora suorum corporum, inquieta cogitatione, que nocturna vigilia; idcoque accepimus multos ex professoribus sapientiae, fuisse peritos ejus: vero Pythagoram, et Empedoclem, et Democritem clarissimos ex his. Autem Hippocrates Cous hujus discipulus, (ut quidam crediderint;) vir insignis et arte et facundia, ex omnibus dignis memoria, primus, quidem, separavit hanc disciplinam ab studio sapientiae. Post quem Diocles Carystius, deinde Praxagoras, et Chrysippus; tum Herophilus et Erasistratus sic exercuerunt hanc artem, ut etiam processerint in diversas vias curandi. Iisdemque temporibus, medicina deducta est in tres partes, ut una esset, quae mederetur victu, altera quae medicamentis, tertia quae manu. Græci nominaverunt Primam διαιτητικὴν, id est Diæticen, secundam Φαρμακευτικὴν, id est Pharmaceuticen, tertiam Χειρουργικὴν, id est Chirurgicen. Autem, longè clarissimi auctores ejus quae curat morbos victu, etiam couati agitare quædam altius, vindicaverunt sibi cognitionem rerum naturæ quoque, tanquam sine ea medicina esset trunca et debilis. Post quos, Serapion primus omnium, professus, hanc rationalem disciplinam nihil pertinere ad medicinam, posuit eam in usu et ex-

TRANSLATION.

requiring its aid, who had impaired their constitutions by arduous study and midnight watching. Accordingly, we learn that many professors of philosophy were skilled in it. Amongst whom, Pythagoras, Empedocles, and Democritus, were the most distinguished. But Hippocrates, of Cos, a disciple of the last, as some believe, was the first worthy of memory who separated this science from philosophy; a man not less admired for his skill in this art than in that of eloquence. After whom, Diocles, the Carystian; after these, Praxagoras and Chrysippus; then Herophilus and Erasistratus also exercised this art, although they proceeded in different modes of treatment. And in those times medicine was so divided into three parts, that there should be one which would be cured by diet, another by medicine, and a third by manual operation. The first of these the Greeks called diæticé, the second pharmaceuticé, and the third chirurgicé. But by far the most illustrious professors of that branch which cures diseases by regimen have endeavoured also to embrace natural philosophy. They have also claimed to themselves a certain profound knowledge, without which medicine would be lame and imperfect. After whom came Serapion, who, first of all, maintained that this theoretical study did not relate to medicine: he confined it to practice and experiments.

Glaucias et aliquanto post Heraclides Tarentinus, et alia quoque non mediores viri secuti, ex ipsa professione se ἐμπειρικοὺς appellaverunt. Sic in duas partes ea quoque, quae vietu curat, medicina divisa est, aliis rationalem artem, aliis usum tantum sibi vindicantibus: nullo vero quidquam post eos, qui supra comprehensi sunt, agitante, nisi quod acceperat: donec Asclepiades medendi rationem ex magna parte mutavit. Ex cujus successoribus Themison nuper ipse quoque quedam in senectute deflexit. Et per hos quidem maxime viros salutaris ista nobis professio increvit.

X Quoniam autem ex tribus medicinæ partibus, ut difficillima, sic etiam elaris-sima est ea, quæ morbis mcdetur, ante omnia de hæ dicendum est. Et quia prima in eo dissensio est, quod alii sibi experimentorum tantummodo notitiam necessariam esse contendunt; alii, nisi corporum rerumq[ue] ratione comperta, non satis potentem usum esse proponunt: indicandum est, quæ maxime ex utraque parte dicantur, quo facilius nostra quoque opinio interponi possit. Igitur ii, qui rationalem medicinam profitentur, haec necessaria esse proponunt: abditarum et morbos continentium cau-

ORDO.

perimentis. Quem Apollonius, et Glaucias, et aliquanto post Heraclides Tarentinus, et alii quoque, non mediores viri secuti, appellaverunt se ἐμπειρικοὺς ex ipsa professione. Sic quoque ea medicina, quæ curat vietu, divisa est in duas partes, aliis vindicantibus sibi artem rationalem, aliis usum tantum: vero nullo, agitante quidquam, post eos, qui comprehensi sunt supra, nisi quod acceperat: donec Asclepiades mutavit rationem medendi ex magna parte. Ex successoribus cujus Themison ipse nuper, deflexit quedam quoque in senectute. Et quidem per hos viros maxime ista salutaris professio increvit nobis.

Antem quoniam ex tribus partibus medicinæ, ut difficillima, ea quæ medetur morbus, sie est etiam elarissima, de hæ dicendum est ante omnia. Et prima, quia, est dissensio in eo, quod alii tantummodo contendunt notitiam experimentorum esse necessariam sibi: alii proponunt, nisi ratione corporum que rerum comperta; usum non esse satis potentem: indicandum est quæ dicantur ex utraque parte maximè; quò nostra opinio possit interponi facilius quoque. Igitur hi qui profitentur rationalem medicinam, proponunt hæc esse necessaria. Notitiam abditarum

TRANSLATION.

Apollonins and Glaucias, and a little after followed Heraclides, a Tarentine, and others of some celebrity, who, from the profession itself, called themselves empiries. So that branch of medicine which cures by diet was divided into two parts; some claiming to themselves the theoretical art, others only the practical. But after those who are mentioned above, none attempted anything, except what he had received from his predecessors, until Asclepiades changed the art of healing in a great measure. Themeson, one of his successors, also has lately (3) differed from him in some things in his old age. And, indeed, this salutary profession has been greatly improved to us by these great men.

But since, of the three parts of medicine, that which relates to the general treatment of disease, as it is the most difficult, so it is also the most noble; to this we must direct our investigation before we can proceed any farther. Because on this point there is some disuseion; some contend, that a knowledge of experiment, is only necessary, whilst others affirm, that practice alone is not sufficient without a knowledge of the constituents (4) of bodies: the principal arguments on each side will be pointed out, by which my own opinion may be the more easily introduced. Therefore those who profess theoretical medicine, contend that diseases, and a knowledge of their latent and contingent causes to be

sarum notitiam, deinde evidentium, post hæc etiam naturalium actionum, novissime partium interiorum. Abditas causas vocant, in quibus requiritur, ex quibus principiis nostra corpora sint, quid secundam, quid adversam valetudinem faciat. Neque enim credunt, posse cum scire, quomodo morbos curare convenient, qui, unde hi sint, ignoret. Neque esse dubium, quin alia curatione opus sit, si ex quatuor principiis vel superans aliquod vel deficiens adversam valetudinem erat; ut quidam ex sapientiae professoribus dixerunt: alia, si in humidis omne vitium est; ut Herophilo visum est: alia, si in spiritu; ut Hippocrati: alia, si sanguis in eas venas, quæ spiritui accommodatae sunt, transfunditur, et inflammationem, quam Græci φλεγμονὴν nominant, excitat, eaque inflammatione talem motum efficit, qualis in febre est; ut Erasistrato placuit: alia, si manantia corpusecula, per invisibilia foramina subsistendo, iter claudunt, ut Asclepiades contendit. Eum vero recte curaturum, quem prima origo causæ non fecellcrit. Neque vero inficiantur, experimenta quoque esse necessaria; sed ne ad hæc quidem aditum fieri potuisse, uisi ab aliqua ratione, contendunt. Non enim quidlibet anti-

necessary, then of their evident ones; after which of their natural functions, and lastly of their internal structure. They call those hidden causes, by which it is required to be known the component principles of our bodies, what restores health, what constitutes disease. For they do not believe it possible for a man to be competent to cure a disease, who is ignorant of its source: nor can there be any doubt for another mode of treatment, if there be a redundancy or deficiency of any one of the four elementary principles existing in a disease, as some of the philosophers have maintained; another, if the whole of the malady be in the humours, as it appeared to Herophilus; another, if by inspiration, after Hippocrates; another, if the blood be extravasated into those vessels (5) which are destined for air, and excites inflammation which the Greeks designate phlegmone, and, that inflammation produces such arterial action as may be seen in fever; according to Erasistratus; another again, led by Asclepiades, insisted on the atomic particles being obstructed in their passage by invisible foramina: but that he will assuredly succeed well, who may not have been deceived in the proximate cause. Neither do they deny the necessity of experiments, but contend, even these cannot be obtained without some theory; for the ancients did not administer, any thing which

TRANSLATION.

might have pleased the patient; but carefully considered what might be most proper, and discovered that by practice, which had previously been pointed out by some conjecture. Neither does it interest us to discuss those remedies now discovered, provided they began on a rational theory: and they affirm the same argument to be applicable in many cases; but new species of diseases frequently appear in which practice, as yet, has disclosed nothing: and on this account it is necessary to investigate their origin; without which no mortal can discover, why he should use one remedy, rather than another. And for these reasons they examine the causes enveloped in obscurity. They designate those evident causes, in which they inquire, whether heat or cold, hunger or excess, and such like, may have given origin to the disease; for they maintain that a man can oppose a malady who is not ignorant of its origin.

They call those natural actions of the body by which we inspire and expire the breath, the reception and digestion of our food and drink, and also by what means they are conveyed to all parts of the body. Then they also inquire, from what cause our arteries rise and fall, what may be the theory of sleep and vigilance; without a knowledge of which they think no one can either mitigate or cure incipient diseases arising from these causes. By which, it appears they attach much

nere ad rem concoctio videtur, huic potissimum insistunt; et duce alii Erasistrato, teri cibum in ventre contendunt; alii Plistonico Praxagorae discipulo, putrescere; alii credunt Hippocrati, per calorem cibos concoqui: acciduntque Asclepiadis æmuli, qui, omnia ista vana et supervacua esse, proponunt: nihil enim concoqui, sed crudam materiam, sicut assumpta est, in corpus omne duci. Et haec quidem inter eos parum constant; illud vero convenit, alium dandum cibum laborantibus, si hoc; alium, si illud verum est. Nam si teritur intus, eum quærendum esse, qui facillime teri possit; si putrescit, cum, in quo hoc expeditissimum est; si calor concoquit, eum, qui maxime calorem movet: at nihil ex his esse quærendum, si nihil concoquitur; ea vero sumenda, quæ maxime manent, qualia assumpta sunt. Eademque ratione, cum spiritus gravis est, cum somnus aut vigilia urget, cum mederi posse arbitrantur, qui prius illa ipsa qualiter eveniant, perceperit. Præter haec, cum in interioribus partibus et dolores et morborum varia genera nascantur, neminem putant his adhibere posse remedia, qui ipsas ignoret,

ORDO.

tio videtur pertinere ad rem maximè; insistunt potissimum huic; et dnce Erasistrato, alii contendunt cibum teri in ventre; alii Plistonico discipulo Praxagoræ, putrescere; alii credunt Hippocrati, eibos concoqui per calorem. Quæmuli Asclepiadis accidunt, qui proponunt omnia ista esse vana et supervacua: enim nihil concoqui, sed crudam materiam, sicut assumpta, est duci in omne corpus. Et haec quidem parum constant inter eos: vero illud convenit, alium cibum dandum laborantibus, si hoc est verum, si illud, alium. Nam si teritur intus, eum esse quærendum, qui possit teri facillime. Si putrescit, eum, in quo hoc est expeditissimum. Si calor concoquit, eum qui movet calorem maxime. At nihil ex his esse quærendum, si nihil concoquitur; vero, ea sumenda, quæ manent maxime, quali assumpta sunt. Eademque ratione, cum spiritus est gravis, cum somnus aut vigilia urget, arbitrantur eum posse mederi, qui prius perceperit qualiter illa ipsa eveniant. Præter haec, cum varia genera et dolores et morborum nascantur interioribus partibus, putant neminem posse adhibere remedia his, qui ipsas ignorat. Ergo esse nece-

TRANSLATION.

importance to concoction (6), and insist upon it especially; others led by Erasistratus, contend that the food is triturated in the stomach; some after Plutonius, the follower of Praxagoras, by putrescence; others again believe Hippocrates, that our ingesta is concocted by calorific. But the emulators of Asclepiades who succeeded them, maintained that all those theories were vain and superfluous; that there is no digestion effected, but the crude matter is distributed into all parts of the body, in the same state that it was received. And in these things they are not consistent; but this they admit, that a certain regimen ought to be followed by the sick, if this theory be true, another, if that. For if it be triturated within, as they say, that kind ought to be selected, which will be most easily reduced; if it becomes putrid, that which most expeditiously undergoes this decomposition; if heat effects digestion, that which promotes heat most; but none of these things are admissible, if there be no concoction, therefore such things are to be taken, as are most likely to remain in the same state.

And for the same reason, when there is a dyspnoea; or when the patient is oppressed with sleep or watching, they suppose that he, who first ascertains from what cause these things proceed, will be able to cure them. Besides these, since pains and various kinds of diseases may arise in the internal parts, they consider no one capable of applying the proper remedies to those parts, of which he may

Necessarium ergo esset, incidere corpora mortuorum, corumque viscera atque intestina scrutari; longeque optime fecisse Herophilum et Erasistratum, qui nocentes homines, a regibus ex carcere acceptos, vivos inciderint, considerarintque, etiamnum spiritu remanente, ea, quæ natura ante elausisset, eorumque positum, colorem, figuram, magnitudinem, ordinem, duritatem, molitatem, lævorem, contactum; processus deinde singulorum et recessus, et sive quid inseritur alteri, sive quid partem alterius in se recipit. Neque enim, cum dolor intus incidit, scire quid doleat, eum, qui qua parte quodque viscus intestinum sit, non cognoverit: neque curari id quod ægrum est, posse ab eo, qui, quid sit, ignoret. Et cum per vulnus alicujus viscera patefacta sunt, eum, qui sanæ cujusque colorem partis ignoret, nescire quid integrum, quid corruptum sit; ita ne suceurrerit quidem posse corruptis. Aptiusque extrinsecus imponi remedia, compertis interiorum et sedibus et figuris, cognitac eorum magnitudine: similesque omnia quæ, posita sunt, rationes habentur. Neque esse crudele, sicut plerique proponunt, hominum nocentium, et horum quoque paucorum, supplicii remedia

sarinm incidere corpora mortuorum, que scrutari viscera atque intestina eorum; que (propont) Herophilum et Erasistratum fecisse longè optime qui inciderint homines nocentes vivos, acceptos à regibus, ex carcere, que considerarint etiamnum spiritu remanente, ea, quæ natura clausisset ante, que positum eorum, colorem, figuram, magnitudinem, ordinem, duritatem, molitatem, lævorem, contactum; deinde processus et recessus singulorum, et sive quid inseritur alteri, sive quid recipit partem alterius in se. Enim cum dolor incidit, neque eum scire quid doleat, qui non cognoverit, quæ parte quodque viscens ve intestinum sit. Neque id quod est ægrum, posse curari ab eo, qui ignoret quid sit. Et cum viscera aliquibus sint patefacta per vulnus, eum, qui ignorat colorem eiususque sanæ partis, nescire quid sit integrum, quid corruptum; ita nequidem posse succurrere corruptis: Que aptius remedia imponi extrinsecus, et sedibus et figuris interiorum compertis, et eorum magnitudine coguita: que omnia quæ sunt posita, habere similes rationes. Neque esse crudele, sicut plerique proponunt, quæ remedia, suppliciis hominum nocentiam, et ho-

TRANSLATION.

be ignorant: hence the necessity of dissecting the bodies of the dead, and examining very minutely their viscera and intestines.

The plan adopted by Herophilus and Erasistratus was much approved of, who obtained by royal edict criminals out of prison for dissection, alive, and contemplated even while they breathed, those parts which nature had before concealed, with their relative position, colour, figure, magnitude, arrangement, hardness, softness, smoothness, and connexion (7); also the processes and recesses of each, whether any one part is inserted into another, or whether it receives part of another into itself. For when there happens to be some internal pain, he cannot know what suffers, if he be ignorant of the situation of each viscera and intestine; nor can the part which is diseased be enred by him who is ignorant of what part it is; and should the viscera of any person be laid open by a wound, he who is ignorant of the colour of each healthy structure, cannot know what is sound, what is morbid; therefore, can render no assistance in the disease: and they maintain that external remedies are more properly applied, when the situation, structure, and magnitude, of the interior parts are ascertained; and the same argument is applicable in all those cases already mentioned. Neither should it be

populis innocentibus saeculorum omnium quæri.

Contra ii, qui sc. ἐμπειρικοὺς ab experientia nominant, evidentes quidem causas, ut necessarias, amplectuntur: obscurarum vero causarum et naturalium actionum quæstionem ideo supervacuam esse contendunt, quoniam non comprehensibilis natura sit. Non posse vero comprehendendi, patere ex corum, qui de his disputarunt, discordia; cum de ista re, neque inter sapientiæ professores, neque inter ipsos medicos conveniat. Cur enim potius aliquis Hippocrati credat, quam Herophilo? cur huic potius, quam Asclepiadi? Si rationes sequi velit, omnium posse videri non improbables; si curationes, ab omnibus his ægros perductos esse ad sanitatem: ita neque disputationi, neque auctoritati cuiusquam fidem derogari oportuisse. Etiam sapientiæ studiosos maximos medicos esse, si ratiocinatio hoc faceret: nunc illis verba superesse, deesse medendi scientiam. Differre quoque pro natura locorum, genera medicinæ; et aliud opus esse Romæ, aliud in Ægypto, aliud in Gallia. rum quoque paucorum, populis innocentibus omnium saeculorum.

Contra ii, qui nominat se ἐμπειρικοὺς (i. e. empeirikous) ab experientia, amplectuntur evidentes eausas quidem, ut necessarias: vero contendunt quæstionem obscurarum causarum et naturalium actionum esse supervacuam, ideo, quoniam, natura non sit comprehensibilis. Vero non posse comprehendendi, patere ex discordia eorum qui disputarunt de his; cum neque conveniat de ista re inter professores sapientiæ, neque inter medicos ipsos. Enim cur aliquis credit Hippocrati potius quam Herophilo? cur hinc, potius quam Asclepiadi? si velit sequi rationes, omnium posse videri non improbables; si curationes, ægros esse perductos ad sanitatem, ab omnibus his: ita neque disputatione, neque auctoritati oportuisse derogari fidem cuiusquam. Etiam (aiunt), studiosos sapientiæ esse maximos medicos, si ratioinatio faiceret hoc: nunc verba superesse illis (vero), scientiam medendi decesse. Genera medicinae quoque differre pro natura locorum; et aliud esse opus Romæ, aliud in Ægypto, aliud in Gallia. Quod si eas causæ facerent morbos, quæ essem eadem ubique, remedia debuisse esse quoque eadem ubique. Eti-

TRANSLATION.

deemed so cruel, as many exclaim, to search for remedies for an innocent people of succeeding ages, at the expense of only a few capital culprits.

On the other hand, those who title themselves empirics, by profession, embrace, it is true, the necessity of evident causes; but they contend that the question of obscure causes and natural actions to be futile; and for this reason, because nature is inscrutable. And that those things are incomprehensible is evident by the dissensions of those who have treated of them, since neither the philosophers, nor the physicians can accord among themselves on those things: for why should any one believe Hippocrates, rather than Herophilus? and why prefer him to Asclepiades? That if a man will follow a theory, each of them seems plausible; if by cures, the sick have been restored to health by them all: therefore it does not become us, either by argument or authority, to impugn the veracity of any of them: even the philosophers would be the greatest physicians, if argument could make them so; but they abound in words—in the healing art they are deficient. Besides, they say, the treatment ought to vary according to the nature of climate; that one mode is necessary at Rome, another in Egypt, and another in Gaul; for, if the same causes could produce disease every where alike, the remedies ought to be the same also.

buisse. Sæpe etiam causas apparere, ut puta lippitudinis, vulneris; neque ex his patere medicinam. Quod si scientiam hanc non subjiciat evidens causa, multo minus eam posse subjicere, quæ in dubio est. Cum igitur illa incerta, incomprehensibilis sit, a certis potius et exploratis petendum esse præsidium; id est, iis, quæ experientia in ipsis curationibus docuerit; sicut in ceteris omnibus artibus. Nam ne agricoram quidem aut gubernatorem disputatione, sed usu fieri. Ac nihil istas cogitationes ad medicinam pertinere, eo quoque discei, quod qui diversa de his senserint, ad eamdem tamen sanitatem homines perduxerint. Id enim fecisse, quia non ab obseuris causis, neque a naturalibus actionibus, quæ apud eos diversæ erant, sed ab experimentis, prout cuique responderant, medendi vias traxerint. Ne inter initia quidem ab ipsis quæstionibus deductam esse medicinam, sed ab experimentis. Ægrorum enim qui sine medicis erant, alios propter aviditatem primis diebus protinus eibum assumpsisse, alios propter fastidium abstinuisse; levatumque magis eorum morbum esse, qui abstinerant. Itemque alios in ipsa febre aliquid edisse, alios paulo ante eam,

TRANSLATION.

That frequently the causes are apparent, for instance lippitudo, or a wound, yet the mode of treatment is not evident: therefore if the evident cause does not indicate this knowledge, how much less, that which is in doubt! Therefore, since the latter is uncertain and inexplicable, rather trust to those things that are certain and approved; that is, those remedies which experience has taught us themselves, as in all other arts: for neither the agriculturist, nor the pilot, is made by disputation, but by practice: and that these argumentations have no relation to medicine, is evident from this, that those who have thought differently on those things, yet they recovered their patients with equal success—and they accomplished this, not because they drew their methods of cure from latent causes, or from natural actions, about which they differed, but from experience, according as they had succeeded to each. They maintain, that medicine even in its origin was not deduced from these researches, but from experiments: for of the sick who were without physicians, some having taken food with avidity in the beginning, others having refrained from it on account of nausea; consequently those who had abstained were more relieved of their disease.

Again, some having taken food in the fever itself, others a little before, and

alios post remissionem ejus; optime deinde iis cessisse, qui post finem febris id feeerant. Eademque ratione alios inter principia protinus usos esse cibo pleniore, alios exiguo; gravioresque eos factos, qui se implerant. Haec similiaque eum quotidie ineiderent, diligentes homines notasse, quae plerumque melius responderent: deinde ægrotantibus ea præcipere cœpisse. Sic medieinam ortam, subinde aliorum salute, aliorum interitu, perniciosa discernentem a salutaribus. Repertis deinde jam remediis, homines de rationibus eorum disserere cœpisse: nee post rationem, medicinam esse inventam, sed post inventam medicinam, rationem esse quæsitam. Requirere etiam, ratio idem doceat quod experientia, an aliud: si idem, supervacuum esse; si aliud, etiam contrariam. Primo tamen remedia exploranda summa cura fuisse, nunc vero jam explorata esse; neque aut nova genera morborum reperiri, aut novam desiderari medicinam. Quod si jam incidat mali genus aliquod ignotum, non ideo tamen fore medico de rebus eogitandum obscuris: sed eum protinus visurum, cui morbo id proximum sit; tentaturumque remedia similia illis, quae vicino malo sæpe succurrerint; et per ejus similitudinem

ORDO.

remissionem ejus; deinde eessisse optime iis, qui fecerant id post finem febris. Eademque ratione, alios inter principia protinus esse usos pleniore cibo, alios exiguo; que eos qui implerant se factos graviores. Haec que similia, eum ineiderent quotidie, diligentes homines notasse quae plerumque responderent melius: deinde cœpisse præcipere ea ægrotantibus. Sie medieinam ortam, subinde salute aliorum, interitu aliorum, discernentem perniciosa a salutaribus. Deinde remeditis jam repertis, homines cœpisse disserere de rationibus eorum: nee medicinam esse inventam, post rationem, sed rationem esse quæsitam post medicinam inventam. Etiam requirere, doceat ratio idein, quod experientia, an aliud? si idem, esse supervacuum; si aliud etiam contrarium. Tamen primo remedia fuisse exploranda summa cura, vero nunc jam esse explorata; neque aut nova genera morborum reperiri, aut novam medieinam desiderari. Quod si aliquod ignotum genus mali jam ineidat, tamen medico non fore ideo cogitandum de rebus obscuris; sed eum protinus esse visurum, cui morbo sit proximum; que tentaturum similia remedia illis, quæ sæpe succurrerunt vicino malo, et per ejus similitudinem reperturum opem.

TRANSLATION.

others a little after its remission; and that it subsided best with those who had done it after the termination of the fever: in the same manner, some having used a fuller diet in the commencement of a disease, others a more abstemious one; and that those who had satiated themselves became worse. These and similar incidences daily happening, diligent men carefully noted such things as for the most part answered best; and afterwards they began to prescribe them for the sick. Thus medicine arose, and by the frequent recovery of some, the sacrifice of others, discerning the noxious from the salutary; then the remedies being discovered, men began to discuss of their modus operandi: that medicine was not invented after theory, but theory was sought for after the discovery of medicine. It is asked, whether theory prescribes the same as experience, or otherwise; if the same, it is superfluous, if different, pernicious. Yet at first it was necessary to investigate remedies with the greatest care, but now they are discovered; we neither meet with any new species of disease, nor do we require a new remedy. Should some unknown disease appear, the physician would not even in that case be compelled to think of the latent causes; but he would at once see, to what disease it bore the nearest resemblance, and prescribe remedies, similar to those which have often relieved analogous cases, and by their similitude would often find a cure. For they

opem reperturum. Neque enim se dīere, eonsilio medicum non egere, et irrationale animal hanc artem posse præstare; sed has latentium rerum conjecturas ad rem non pertinere; quia non intersit, quid morbum faciat, sed quid tollat; neque ad rem pertineat, quoniam, sed quid optime digeratur; sive hae de causa conœctio ineidat, sive de illa; et sive conœctio sit illa, sive tantum digestio. Neque quærendum esse quoniam spiremus, sed quid gravem tardumque spiritum expeditat: neque quid venas moveat, sed quid quæque motus genera significant. Hæc autem cognosci experimentis. Et in omnibus ejusmodi cogitationibus in utramque partem disseri posse: itaque ingenium et faeundiam vineere; morbos autem, non eloquentia, sed remedii curari. Quæ si quis elinguis usu discreta bene norit, hunc aliquanto majorem medieum futurum, quam si sine usu linguam suam exequatur. Atque ea quidem, de quibus est dictum, supervæua esse tantummodo; id vero, quod restat, etiam erudele: vivorum hominum alvum atque præcordia incidi, et salutis humanæ præsidem artem, non solum pestem alicui, sed hanc etiam atrociissimam inferre; eum præsertim

ORDO.

Enim neque se dicere, medicum non egere consilio, et irrationale animal posse præstare hanc artem; sed has conjecturas latenterum rerum non pertinere ad rem; quia, non intersit, quid faciat morbum, sed quid tollat; neque pertineat ad rem, quoniam, sed quid, digeratur optime; sive concoctio incidat de hac causa, sive de illa; et sive illa sit concoctio, sive tantum digestio. Neque esse querendum quoniam spiremus, sed quid expeditat gravem quæ tardem spiritum: neque quid moveat venas, sed quid quæque genera motus significant. Autem hæc cognosci experimentis. Et in omnibus cogitationibus ejusmodi posse disseri in utramque partem: itaque ingenium et faeundiam vineere; autem morbos non curari eloquentia, sed remedies. Quæ si quis elingnis norit bene discreta, hunc futurum aliquanto majorem medieum, quam si excolleret suam linguam sine usu. Atque quidem ea, de quibus est dictum, esse tantummodo supervacua; vero id quod restat etiam erudele: incidi alvum atque præcordia vivorum hominum, et inferre hanc præsidem artem humanae salutis, non solum pestem alicui, sed etiam atrocissimam; cum præsertim ex iis, quæ quæ-

TRANSLATION.

do not say, that a physician is not to use his judgment, and that an irrational animal can practise this art; but they maintain, that those theories of latent causes have no relation to this; because it does not interest us what causes, but what removes a disease; neither does it depend upon the manner how, but what, is digested best: whether concoction may arise from this, or that cause; or whether it may be conœction simply, or only distribution: nor is it to be asked how we breathe, but what relieves a difficult and heavy(8) breathing; nor what may produce action in the arteries, but what each kind of action may indicate.

But these things are known by experiments, and that in all disputations of this nature, much may be said on both sides, therefore ingenuity and eloquence prevail; but diseases are not to be cured by eloquence, but by remedies; consequently, suppose any person defective in this talent, be well acquainted with remedies discovered by practice, will he not be a much greater physician than the man who has cultivated his language without experience? But indeed those things of which we have spoken are only superfluous, but that which remains is even cruel; to lay open the abdomen and præcordia of living men, and that science which presides over the health of mankind, is not only made the instrument of death, but that of the most atrocious; especially when some of those things, which are sought after

ex iis, quæ tanta violentia querantur, alia non possint omnino cognosci, alia possint etiam sine scelere. Nam colorem, lævorem, mollitatem, duritatem, similiaque omnia, non esse talia, inciso corpore, qualia integro fuerint: quia cum, corporibus inviolatis, hæc tamen metu, dolore, inedia, cruditate, lassitudine, mille aliis mediocribus affectibus saepe mutantur; multo magis verisimile est, interiora, quibus major mollities, lux ipsa nova sit, sub gravissimis vulneribus et ipsa trucidatione mutari. Neque quidquam esse stultius, quam quale quidque vivo homine est, tale existimare esse moriente, immo jam mortuo. Nam uterum quidem, qui minus ad rem pertineat, spirante homine posse diduci: simulatque vero ferrum ad præcordia accessit, et discissum transversum septum est, quod membrana quadam superiores partes ab inferioribus diducit (*διάφραγμα* Græci vocant) hominem protinus animam amittere: ita mortui demum præcordia et viscus omne in conspectum latrocinantis medici dari necesse est tale, quale mortui sit, non quale vivi fuit. Itaque consequi medicum ut hominem crudeliter jugulet; non ut sciat, qualia vivi viscera habeamus. Si quid tamen sit, quod adhuc

Neque quidquam esse stultius, quam existimare quidque esse tale moriente, immo jam mortuo, quale est vivo homine. Nam quidem uterum, qui minus pertineat ad rem, posse diduci spirante homine: vero atque simul ferrum accessit ad præcordia, et transversum septum est dissesum, quod quadam membrana didicit superiores partes ab inferioribus (Græci vocant *διάφραγμα*) hominem protinus amittere animum: ita præcordia et omne viscus mortui demum dari in conspectum latrocinantis medici est necesse tale, quale sit mortui, non quale fuit vivi. Itaque medicum consequi hominem ut jngulet crudeliter; non ut sciat, viscera qualia habeamus vivi. Tamen si quid sit, quod adhuc

TRANSLATION.

with so much cruelty, cannot be known at all, whilst others may be examined even without any violence; for the colour, smoothness, softness, hardness, and such like, are not the same in a wounded body, as they were in a sound; because, even in bodies that have received no violence, yet these qualities are often changed by fear, grief, hunger, indigestion, lassitude, and a thousand other trifling affections; and it is much more probable, that the internal parts being very tender and never exposed, even the light itself might effect a change by severe wounding and laceration. Nor can any thing be more absurd, than to suppose the part to be the same in a dying man, nay, already dead, as it is in a living person: the abdomen (9) may be laid open, it is true, even while the man is breathing (which does not strictly bear on the case); but as soon as the knife has approached the præcordia (10), and the transverse septum is divided, which separates the superior from the inferior, (which the Greeks call diaphragm,) the man immediately expires; consequently, the præcordia, and all the viscera, present the same appearances to the slaughtering physician as those of a dead person, not such as they were while he lived; therefore the only object attained by the physician is that of murdering a man cruelly, not that he can ever ascertain their nature and functions as we have them in life: yet if there may be any interesting phenomena to be subjected to the

spirante homine conspectui subjiciatur, id saepe casum offerre eurantibus. Interdum enim gladiatorem in arena, vel militem in acie, vel viatorem a latronibus exceptum sic vulnerari, ut ejus interior aliqua pars aperiatur, et in alio alia: ita sedem, positum, ordinem, figuram, similiaque alia cognoscere prudenter medicum, non caedem, sed sanitatem molientem; idque per misericordiam discere, quod alii dira crudelitate coguoverint. Ob haec, ne mortuorum quidem lacerationem necessariam esse; quae etsi non erudelis, tamen fœda sit; cum aliter pleraque in mortuis se habent: quantum vero in vivis cognosci potest, ipsa curatio ostendat.

Cum haec per multa volumina, perque magnæ contentionis disputationes a medieis saepe tractata sint atque tractentur: subjiciendum est, quæ proxima vero videri possint. Ea neque addicta alterutri opinioni sunt, neque ab utraque nimium abhorrentia; media quodammodo inter diversas sententias: quod in plurimis contentionibus deprehendere licet, sine ambitione verum serutantibus, ut in hac ipsa re. Nam quæ demum causæ, vel secundam valetudinem præstent, vel morbos exent; quomodo spiritus, aut cibus, vel traha-

ORDO.

subjiciatur conspectui spirante homine, id casum saepe offerre eurantibus. Enim interdum gladiatorem in arena; militem in acie, vel viatorem exceptum a latronibus sic vulnerari, ut aliqua interior pars ejus aperiatur, et alia in alio, ita prudenter medium cognoscere sedem, positum, ordinem, figuram, que similia, non caedem, sed molientem sanitatem, que discere id per misericordiam, quod alii cognoverint dira erudelitate. Ob hoc ne quidem lacerationem mortuorum esse necessarium; et quæ si non erudelis, tamen sit fœda, cum pleraque habeant se aliter in mortuis. Vero enratio ipsa ostendat, quantum potest cognosci in vivis.

Cum haec saepe tractata sint, atque traentur, per multa volumina à medicis, quæ per disputationes magnæ contentionis, est subjiciendum quæ possint videri proxima vero. Ea neque sunt addicta alterutri opinioni, neque abhorrentia nimium ab utraque inter diversas sententias quodammodo media; quod scrutantibus verum sine ambitione in plurimis contentionibus licet deprehendere, ut in hac ipsa re. Nam quidem, ne professores sapientiae comprehendunt scientia quæ eausæ demum, vel præstent secundam valetudinem, vel exent morbos, quomodo vel spiritus traha-

TRANSLATION.

view, in the man as yet breathing, practitioners have frequent opportunities of meeting them by accidents; for sometimes the gladiator in the arena, a soldier in the field, or a traveller intercepted by banditti, is wounded in such a manner as to display some of the interior parts, and so, other parts in other persons: thus the prudent physician discovers their structure, relative position, arrangement, figure, and the like, not by perpetrating murder, but endeavouring to restore health; and learns that, by compassion, which others have discovered by unrelenting cruelty. And for these reasons (I consider it) unnecessary to lacerate even the dead, which, although not cruel, yet it may be disgusting; since most things are found very different in dead bodies; even the dressing of wounds themselves may show all that can be discovered in the living.

Since these topics have often been, and still continue to be treated by physicians with great warmth in voluminous works, I must here submit some reflections, which may appear to come nearer to the truth. These are neither blindly adherent to the dogmas of either party, nor diverging too much from each, but in some measure the medium betwixt these two extremes; which is allowable to those searching after truth, impartially, to seize in all controversies, as in this case itself. That science by which the cause of healthy and morbid actions are excited in the body; the

tur, vel digeratur, ne sapientiae quidem professores scientia comprehendunt, sed conjectura persequuntur. Cujus autem rei non est certa notitia, ejus opinio certum reperire remedium non potest. Verumque est, ad ipsam curandi rationem nihil plus conferre, quam experientiam. Quamquam igitur multa sint, ad ipsas artes proprie non, pertinentia, tamen eas adjuvant, excitando artificis ingenium. Itaque ista quoque naturae rerum contemplatio, quamvis non faciat medicum, aptiorem tamen medicinæ reddit. Verique simile est, et Hippocratem et Erasistratum et quieumque alii, non contenti febres et ulcera agitare, rerum quoque naturam ex aliqua parte scrutati sunt, non ideo quidem medicos fuisse, verum ideo quoque maiores medicos extitisse. Ratione vero opus est ipsi medicinæ, etsi non inter obscuras causas, neque inter naturales actiones, tamen sæpe. Est enim hæc ars conjecturalis, neque respondet ei plerumque non solum conjectura, sed etiam experientia. Et interdum non febris, non cibus, non somnus subsequitur, sicut assuevit. Rarius, sed aliquando morbus quoque ipse novus est : quem non incidere, manifeste falsum est ; cum ætate nostra quædam, ex

TRANSLATION.

physiology of respiration and digestiou is inexplicable to the philosophers themselves, they only follow hypotheses. Now when there is no certain knowledge of a thing, a mere opinion of it cannot discover a certain remedy ; and it must be confessed, that nothing condncs more to the rational method itself of healing, than experience. Therefore, althongli there are many auxiliary sciences embraced, not arbitrarily in the art itself, yet they may advance that art, by unfolding the genins of the artist; hence, although natural philosophy does not constitute a physician, yet it may render him more fit for the practiee of medicine. And it is very probable, that both Hippocrates, Erasistratus, and some others, not being content to exereise themselves on fevers and ulcers alone, examined into physics also, in some measure, not that they could have been physicians on that account, yet by the collateral aid of that science they excelled as physicians. Now medicine itself frequently requires the assistance of theory, although not always applicable to latent eances, nor to natural actions ; for it is a conjectural art; and not only conjecture in many easess, but even experience itself, is anomalous and inconsistent.

Sometimes neither fever, food, nor sleep, is followed by its usnal preeedents : sometimes (though more rarely) the disease itself is new ; which, to suppose does not happen, is manifestly false ; for in our own time a certain lady expired in a few

naturalibus partibus carne prolapsa et arente, intra paucas horas exspiraverit; sic ut nobilissimi medici neque genus mali, neque remedium invenerint. Quos ego nihil tentasse judico, quia nemo in splendida persona periclitari conjectura sua voluerit; ne occidisse, nisi servasset, videretur: veri tamen simile est, potuisse aliquid cogitare, detracta tali verecundia, et fortasse responsurum fuisse id, quod aliquis esset expertus. Ad quod medicinæ genus, neque semper similitudo aliquid confert; et si quando confert, tamen id ipsum rationale est, inter multa similia genera et morborum, et remediorum, cogitare, quo potissimum medicamento sit utendum. Cum igitur talis res incidit, medicus aliquid oportet inveniat, quod non ubique fortasse, sed saepius tamen etiam respondeat. Petet autem novum quoque consilium, non ab rebus latentibus (istae enim sunt dubiae et incertæ sunt) sed ab iis, quæ explorari possunt; id est evidenter causis. Interest enim, fatigatio morbum, an sitis, an frigus, an color, an vigilia, an fames fecerit, an cibi vinique abundantia, an intemperantia libidinis. Neque ignorare hunc oportet, quæ sit ægri natura: humidum magis, an magis siccum corpus ejus sit;

hours of gangrene from prolapsus uteri (11); so that the most celebrated physicians could neither discover the nature of the malady, nor a remedy. And for this reason, I suppose, that no one was inclined to endanger his reputation by experimenting on such a noble personage, lest it might appear that he destroyed her, unless he had saved her; yet it is probable, that some one laying aside such timidity and false delicacy, might have tried something, and perhaps it would have succeeded. Neither does analogy always confer much aid in this kind of practice, and when it does, this of itself is theoretic, for among a multiform genera both of similar diseases and similar remedies, it is to be considered what treatment we can principally rely upon. Therefore, when such a case happens, it is the duty of the physician to find out something which, although perhaps it does not always succeed, yet frequently it may: and he may derive new information, not from latent causes, for they are ambiguous and uncertain, but from those resources which are capable of further research, that is, from the evident causes. For it is of considerable import to know, whether the disease was produced by fatigue, or thirst, or cold, or heat, or watching, or hunger; or whether it arose from immoderate eating and drinking, or intemperate lust. Neither ought he to be unacquainted with the constitution of the patient, whether his body be too moist or too dry; whether his nerves (12) be

validi nervi, an infirmi; frequens aduersa valetudo, an rara; eaque, cum est, vehementis esse soleat, an levis; brevis, an longa: quod is vitæ genus sit secutus, laboriosum, an quietum; cum luxu, an cum frugalitate. Ex his enim, similibusque, saepe curandi nova ratio ducenda est.

Quamvis haec quidem sic præteriri debent, quasi nullam controversiam recipient. Nam et Erasistratus non ex his fieri morbos dixit; quoniam et alii, et iidem alias post ista non febricitarent: et quidam medici sæculi nostri, sub auctore, ut ipsi videri volunt, Themisone, contendunt, nullius causæ notitiam quidquam ad curationes pertinere; satisque esse, quedam communia morborum intueri. Siquidem horum tria genera esse, unum adstrictum, alterum fluens, tertium mistum. Nam modo parum excernere ægros, modo nimium; modo alia parte parum, alia nimium. Haec autem genera morborum, modo acuta esse, modo longa; et modo increscere, modo consistere, modo minui. Cognito igitur eo, quod ex his est, si corpus adstrictum est, digerendum esse; si profluvio laborat, continendum; si mistum vitium habet, oc-

TRANSLATION.

strong or weak; whether he be frequently or rarely ill; and whether his complaints are accustomed to be violent or light, short or long; what kind of life he has followed, whether laborious or tranquil, in luxury or frugality: from these and similar circumstances, a new mode of treatment is often to be deduced.

However, even these points ought not to be passed over, as if they admitted of no controversy; for Erasistratus maintained that diseases did not arise from these things; because others, nay the same persons at another time, would not have fever from them: and some physicians of our own age, under Themison's authority, (as they wish it to appear,) contend that a knowledge of the cause can have no influence over the treatment; and that it is sufficient to observe some of the most common affinities of diseases; and that there are three kinds of these, one constipated, the other relaxed, and the third a mixture of these two. For sometimes the secretions are too small, sometimes too much; and sometimes too little in one part, in another too much: that these diseases are sometimes acute, sometimes chronic, sometimes progressive, sometimes they reach their acme, and sometimes diminish. Therefore, when the complaint is known to arise from any of these, if the body be constipated, it ought to be relaxed, if it suffer from a flux, it ought to be restrained; if it take on a complicated character, then we must re-

eurrendum subinde vehementiori malo. Et aliter acutis morbis medendum, aliter vetustis; aliter incrementibus, aliter subsistentibus, aliter jam ad sanitatem inclinatis. Horum observationem medicinam esse; quam ita finiunt, ut quasi viam quamdam, quam μέθοδον Graeci nominant, eorumque, quae in morbis communia sunt, contemplatrieem esse contendant. Ac neque rationalibus se, neque experimenta tantum spectantibus annumerari volunt: cum ab illis eo nomine dissentiant, quod in conjectura rerum latentium nolunt esse medicinam; ab his eo, quod parum artis esse in observatione experimentorum eredunt. Quod ad Erasistratum pertinet, primum ipsa evidenter ejus opinioni repugnat; quia raro, nisi post horum aliquid, morbus venit. Deinde non sequitur, ut quod alium non afficit, aut eundem alias, id ne alteri quidem, aut eidem tempore alio noceat. Possunt enim quædam subesse corpori, vel ex infirmitate ejus, vel ex aliquo affectu, quæ vel in alio non sunt, vel in hoc alias non fuerunt; caue per se non tanta, ut concident morbum, tamen obnoxium magis aliis injuriis corpus efficiant.

lieve the more violent. And that we ought to treat an acute disease differently from a chronic one, an increasing one differently from one that is stationary, and another when convalescent. The observation of these things constitutes the *Theory and Practice of Medicine*, which they define so, and maintain it to be the observation of those things which are common in disease, as if it were a certain way of proceeding which the Greeks call method: but they will not admit themselves to be numbered either with theorists, or pure empirics; since they dissent from those, in this respect, that they will not admit of medicine to consist in hypotheses of latent causes; from these they differ in this, because they maintain that the observation of experiments to be a very small part of the art. As far as it relates to the dogmas of Erasistratus, in the first place, his opinion is repugnant to evidence itself, because a disease rarely comes on unless preceded by some of these occurrences; in the next place, it does not follow that what does not affect one person, may not injure another; nor what does not affect the same person at one time may not hurt him at another: for there may be some latent lurking poisons in the body either from weakness or disease, which either are not in another, nor were they in the same body at a different time; and these, perhaps, not so great of themselves as to excite the latent disease into action, yet they may predispose the body to be more susceptible of other injuries: but if he had been sufficiently skilled in the

Quod si contemplationem rerum naturæ, quam temere medici sibi vindicant, satius compreliedisset, etiam illud scisset, nihil omnino ob unam causam fieri, sed id pro causa apprcheudi, quod contulisse plurimum videtur. Potest autem id, dum solum est, non movere, quod junctum aliis maxime movet. Accedit ad hæc, quod ne ipse quidem Erasistratus, qui transfuso in arterias sanguine febrem fieri dicit, idque nimis repleto corpore incidere, reperit, cur ex duobus æque repletis, alter in morbum incideret, alter omni periculo vacaret; quod quotidie fieri appetet. Ex quo disci potest, ut vera sit illa transfusio, tamen illam, non per se, cum plenum corpus est, fieri, sed cum horum aliquid accesserit. Themisonis vero æmuli, si perpetua, quæ promittunt, habent, magis etiam, quam ulli rationales sunt. Neque enim, si quis non omnia tenet, quæ rationalis alias probat, protinus alio novo nomine artis indiget; si modo, quod primum est, non memoriae soli, sed rationi quoque insistit. Si, quod vero proprius est, vix ulla perpetua præcepta medicinalis ars recipit, idem sunt, quod ii, quos experimenta sola sustinent: eo magis, quoniam, compres-

hendisset contemplationem rerum naturæ, quam medici temere vindicant sibi, etiam illud seisset nihil omnino ob unam causam fieri, sed id apprehendi pro causa, quod videtur plurimum contulisse. Antem id non potest, movere, dum est solum, quod junctum aliis movet maxime. Accidit ad hæc, quod ne quidem Erasistratus ipse, reperit, qui dief febrem fieri, sanguine transfuso in arteria, que id incidere corpore nimis repleto, cur ex duabus, æque repletis, alter incidet in morbum, alter vaevaret omni periculo; quod appetet fieri quotidie. Ex quo potest disci, ut illa transfusio sit vera, tamen illam non fieri per se, eum corpus est plenum, sed eum aliquid horum accesserit.

Vero æmuli Themisonis, si habent perpetua, quæ promittunt, etiam sunt magistralis quam nulli. Enim neque, si quis non tenet omnia, quæ alias rationalis probat, protinus indiget alio novo nomine artis; si modo, quod est primum, non insistit memoriae soli, sed quoque rationi. Si, quod est propins vero, medicinalis ars recipit vix ulla perpetua præcepta, sunt idem, quod ii, quos experimenta sola sustinent: eo magis, quoniam, quili-

TRANSLATION.

contemplation of the laws of nature, which physicians rashly claim to themselves, he must have known this also, that nothing can arise entirely from one cause, but that must be taken for the cause which seems to have contributed most to the effect. Now it may happen, that that which can produce no effect alone, being united with other things excite very much. In addition to these things, for which Erasistratus himself could assign no cause, he says that a fever arises from a transfusion of the blood into the arteries, and that this happens to plethoric persons: why then of two persons equally plethoric shall the one become diseased, whilst the other shall escape from all danger? which appears to happen daily. By this it may be learned, that although this transfusion may take place, yet that does not happen of itself, when there is plethora, but when it is accompanied by some of those conditions above-mentioned.

But if the disciples of Themison have asserted their principles to be perpetual, they are even greater rationalists than others; for although one man does not embrace every tenet which another approves, the art itself requires no new name; but upon this condition, that he does not insist upon memory alone, without theory, which is the principal thing. But if, which is nearer to the truth, the medical art scarcely admits of any perpetual axioms, they are the same with those sustained by practice

serit aliquem morbus, an fuderit, quilibet etiam imperitissimus videt: quid autem eompressum corpus resolvat, quid solutum teneat, si a ratione tractum est, rationalis est medieus; si, ut ei qui se rationalem negat, confiteri neeesse est, ab experientia, empiricus. Ita apud eum morbi eognitio extra artem, medicina intra usum est. Neque adjeetum quidquam empirieorum professioni, sed demptum est; quoniam illi multa circumspicieunt, hi tantum faillima, et non plus, quam vulgaria. Nam et ii, qui pecoribus aë jumentis medentur, cum propria eu jusque ex mutis animalibus nosse non possint, communibus tantummodo insistunt: et exteræ gentes, eum subtilem medicinæ rationem non noverint, eommunia tantum vident: et qui ampla valetudinaria nutriunt, quia singulis summa eura eonsulere non sustinent, ad eommunia ista configuiunt. Neque, Hereules, istud antiqui medieci nesseierunt, sed his contenti non fuerunt. Ergo etiam vetustissimus auctor Hippocrates dixit, mederi oportere, et eommunia, et propria intuentem. alone; and for this reason, because any person, even the most unskilful, can discover whether a disease has constipated or relaxed a man: but if the principles be deduced from reason, which relax a constipated body, or bind a loose one, he is a theoretical physician; if from experience, as he must of a necessity confess, who denies himself to be a dogmatist (13), then he is an empiric: therefore, according to the latter, the knowledge of a malady is beyond his art, the remedy is within the limits of experience. Neither is any thing added by the latter to the profession of the empirics: on the contrary, something is taken from them; since those examine many things with keen circumspection, these regard only the easiest, and no more than the common. For even those who practise on cattle and beasts of burden, since they cannot obtain of the dumb animals the peculiarities of each, rely solely on what is common to them all: and foreign nations, as they are unacquainted with any subtle theory of medicine, only regard the common diagnoses: and those who attend on large hospitals, betake themselves to those common symptoms, because they are not able to consult the peculiarities of each with much care. Nor, indeed, were the ancient physicians ignorant of this, but they were not content with it; therefore even the most ancient author, Hippocrates, has said, that it behoves the physician to observe both the common and peculiar symptoms in their mode of treatment. Nor is it possible even for these methodists (14)

possunt: siquidem et compressorum et fluentium morborum genera diversa sunt; faciliusque id in iis, quæ fluunt, inspici potest. Aliud est enim sanguinem, aliud bilem, aliud cibum vomere; aliud dejectionibus, aliud torminibus laborare; aliud sudore digeri, aliud tabe consumi. Atque in partes quoque humor erumpit, ut oculos, auresque: quo periculo nullum humanum membrum vacat. Nihil autem horum sic ut aliud curatur. Ita protinus in his a communi fluentis morbi contemplatione ad propriam medicina descendit. Atque in hac quoque rursus alia proprietatis notitia saepe necessaria est; quia non eadem omniibus, etiam in similibus casibus, opitulantur. Siquidem certæ quædam res sunt, quæ in pluribus ventrem aut adstringunt, aut resolvunt: inveniuntur tamen, in quibus aliter, atque in ceteris, idem eveniat. In his ergo communium inspectio contraria est, proprietatum tantum salutaris. Et causæ quoque aestimatio saepe morbum solvit. Ergo etiam ingeniosissimus saeculi nostri medicus, quem nuper vidi-

to confine themselves in any manner to their own principles; since there are different kinds both of the constipated and loose diseases, and it can be more easily distinguished in those who are suffering under flux, for it is one thing to vomit blood, another to vomit bile, and another the food; one shall labour under a diarrhoea; another under dysentery; one may be emaciated by colliquative sweats, another wasted by consumption.

A discharge takes place in certain parts, for instance, the eyes and ears, from which no part of the human frame is exempt: but not one of these complaints is to be treated exactly in the same manner as another; so therefore in such cases as these, the physician descends from the common classification of running diseases to the peculiar. And even in this again, a knowledge of idiosyncrasy is often necessary, because the same remedies will not avail all, even in similar cases: although there are some certain things which either excite or repress the alvine secretions in most people; yet there are some persons to be found, in whom the result might happen to be otherwise. Therefore in these cases an observation of the common diagnoses is injurious, the peculiar only salutary, and a correct pathologial distinction of the cause often removes the disease. In this manner also Cassius, the most ingenious physician whom we have seen of our age, being applied to by a certain person in a state of high fever, accompanied with great thirst, when he had discovered the exciting cause to have proceeded from intoxication, ordered him

eum premi cœpisse cognosset, aquam frigidam ingessit. Qua ille epota, cum vini vim miscendo fregisset, protinus fecbrem somno et sudore discussit. Quod auxilium medicus opportune providit, non ex eo, quod aut adstrictum corpus erat, aut fluebat; sed ex causa, quæ ante præcesserat. Estque etiam proprium aliquid et loci et temporis, istis quoque autoribus: qui cum disputant, quemadmodum sanis hominibus agendum sit, præcipiunt ut gravibus aut locis aut temporibus magis vitetur frigus, aestus, satietas, labor, libido; magisque ut conquiescat iisdem locis aut temporibus, si quis gravitatem corporis sentit; ac neque vomitu stomachum, neque purgatione alvum sollicitet. Quæ vera quidem sunt; a communibus tamen ad quædam propria descendunt. Nisi persuadere nobis volunt, sanis quidem considerandum esse, quod cœlum, quod tempus anni sit; ægris vero non esse: quibus tanto magis omnis observatio necessaria est, quanto magis obnoxia offensis infirmitas est. Quin etiam morborum in iisdem hominibus aliæ atque aliæ proprietates sunt; et qui secundis aliquando frustra curatus est, contrariis saepè restituitur. Plurimaque in dando

cold water: which being drunk, it reudeed the strength of the wine by dilntion, and he was immediately relieved of fever by sleep and perspiration. Which remedy the physician very opportunely adopted in this case, not from his body being either constipated or relaxed, but from the preceding cause. And as there is also some peculiarity both of time and place in those authors; who, when treating of the manner in which healthy persons are to conduct themselves, strictly advise them to shun cold, heat, excess, labour, and lust in all unhealthy places and seasons: and they enjoin more rest in those places or times, if any person feel the sensation of a weight on the body; and in such cases the stomach is neither to be disturbed by vomiting, nor the bowels by purging. Which things indeed are very true; yet they descend from the common to the peculiar symptoms: unless they wish to persuade us, that even healthy persons ought to consider the nature of the atmosphere, and the season of the year, but these observations are unnecessary for invalids; to whom every precaution is proportionately more indispensable, as an infirm state of health is more susceptible of injury. But there are, not only a variety of diseases, but also a variety of peculiarities in the same persons, and one who has been treated unsuccesfully by apparently appropriate remedies, is frequently restored by their contraries. And there is also much discrimination to be observed

cibo discrimina reperiuntur; ex quibus contentus uno ero. Nam famem facilius adolcsens, quam puer; facilius in denso cœlo, quam in tenui; facilius hieme, quam æstate; facilius uno cibo, quam prandio quoque assuetus; facilius inexercitatus, quam exercitatus homo sustinet. Sæpe autem in eo magis necessaria cibi festinatio est, qui minus inediā tolerat. Ob quæ conjicio, eum, qui propria non novit, communia tantum intueri debere; eumque, qui nosse propria potest, illa quidem non oportere negligere, sed his quoque insistere. Ideoque, cum par scientia sit, utiliorē tamen medicum esse amicum, quam extraneum. Igitur, ut ad propositum meum redeam, rationalem quidem puto medicinam esse debere: instrui vero ab evidētibus causis; obscuris omnibus, non a cogitatione artificis, sed ab ipsa arte rejectis. Inciderc autem vivorum corpora, et crudele, et supervacuum est: mortuorum, discentibus necessarium. Nam positum et ordinem nosse debent; quæ, cadavera melius, quam vivus et vulneratus homo, repræsentant. Sed et cetera, quæ modo in vivis cognosci possunt, in ipsis curationibus vulnera-

ORDO.

reperiuntur in cibo dando: ex quibus ero contentus uno. Nam adolcsens sustinet famem facilius quam puer, facilius in denso cœlo, quam in tenui; facilius hieme, quam æstate; facilis assuetus uno cibo, quam prandio quoque; inexercitatus facilis quam exercitatus homo. Autem sæpe festinatio cibi est magis neeessaria in eo, qui tolerat inediā minus. Ob quæ conjicio eum, qui novit non propria, debere intueri tantum communia; que oportere cum qui potest nosse propria, non quidem negligere illa, sed quoque insistere his.

Que ideo cum scientia sit par, tamen amicum esse utiliore medicinam, quam extraneum. Igitur, ut redeam ad meum propositum, puto medicinam debere quidem esse rationalem: vero iustrii ab evidētibus causis; omnibus obscuris rejectis, non à cogitatione artificis, sed ab arte ipsa. Autem incidere corpora vivorum est et crudele et supervacuum: mortuorum necessarium discentibus. Nam debent nosse positum, et ordinem, quæ cadavera repræsentant melius, quam vivus et vulneratus homo. Sed ut nus ipse monstrabit cetera, quæ possunt modo cognosci in vivis, in curationibus

TRANSLATION.

in giving food; of which I shall be content with one. For instance: a young man sustains hunger more easily than a boy; more easily in a dense atmosphere, than in a more pure air; more easily in winter than in summer; he who is accustomed to a single repast easier than he who takes a dinner (15) also; an inactive person more easily, than one who takes exercise. But the frequent repetition of food is the more necessary to him who can least support hunger. For these reasons, I think, that he, who has not acquired the idiosyncraies ought only to attend to the common symptoms; and it behoves him who can discover the peculiar, certainly not to neglect the former, but to rely chiefly on the latter.

And on that account, a friend will be the more successful physician, than the stranger, when there is a parity of knowledge possessed by each. Now, that I may return to my proposition, I think, certainly, medicine ought to be rational, but to be directed by evident causes, all the latent being rejected, not from the contemplation of the artist, but from the art itself. And to dissect the bodies of living animals is both cruel and superfluous: but the examination of dead subjects is imperatively necessary on students: for they ought to know the position and order of the parts, which are demonstrated with greater facility in dead bodies, than in a living and wounded man. As for the rest, practice itself will point out such things, which can only be

torum paulo tardius, sed aliquanto mitius usus ipse monstrabit. His propositis, primum dicam, quemadmodum sanos agere conveniat: tum ad ea transibo, quae ad morbos curationesque eorum pertinebunt.

CHAP. I.

INSTRUCTIONS FOR HEALTHY PERSONS.

A MAN of sound constitution, who is in the enjoyment of good health and a free agent, ought to be under no restriction of regimen; and neither to require the physician nor an iatralipta (16).

It is necessary for him to have a diversified kind of life; sometimes to be in the country, sometimes in town, and more frequently in the fields; to sail, to hunt, to rest at times, but to exercise himself more frequently; for indolence debilitates the frame, labour strengthens it; the one brings on premature age, the other a long adolescence. Sometimes the warm bath (17) may be used with advantage, sometimes the cold; to anoint at times, and at other times to neglect it; to avoid no kind of food that may be in common use; sometimes to banquet, at other times to withdraw himself from it; sometimes to eat more plentifully, at another time to take no more than just enough; to take food twice in the day rather than once, and always as much as he can digest. But as exercise and food of this kind are necessary, so those of wrestlers are improper; for on account of some domestic necessity, the

ordo exercitationis corpus affligit; et ea corpora, quae more eorum repleta sunt, celerime et senescunt, et ægrotant. Concubitus vero neque nimis concupiscentius, neque nimis pertimescendus est: rarus, corpus excitat, frequens, solvit. Cum autem frequens, non numero sit, sed natura, ratione ætatis et corporis, scire licet, cum non inutilem esse, quem corporis neque languor, neque dolor sequitur. Idem interdiu pejor est, noctu tutior: ita tamen, si neque illum eibus, neque hunc cum vigilia labor statim sequitur. Hæc firmis servanda sunt; cavendumque, ne in secunda valetudine adversæ præsidia consumantur.

ORDO.
ter aliquas civiles necessitates affligit corpus; et ea corpora, quæ sunt repleta more eorum, celerime et senescunt, et ægrotant. Vero concubitus est neque concupiscentius nimis, neque pertimescendus nimis; rarus, excitat corpus, frequens, solvit. Cum autem sit frequens, non numero, sed natura, licet seire ratione ætatis et corporis, cum non esse inutilem, quem neque languor, neque dolor corporis sequitur. Idem est pejor interdiu, tutior noctu: tamen ita si neque eibus statim sequitur illum, neque labor cum vigilia (statim sequitur) hunc.

Hæc sunt servanda firmis; que cavendum ne in secunda valetudine adversæ præsidia aduersæ consumentur.

TRANSLATION.

order of the exercise being interrupted, the body is injured; and those whose bodies are so highly fed, like theirs, very soon become feeble and diseased.

Now venery is neither to be indulged in too freely, nor entirely shunned; in moderation it animates the body, a frequeney debilitates it. But as it may not be understood by the number of repetitions, we may know by the nature, the age, and constitution of a person, that it is not injurions, when it is followed neither by languor, nor pain of the body. It is more injurious in the day-time, but safer in the night; provided that neither the first be immediately followed by food, nor the last by vigilance and labour.

These preecepts ought to be observed by the healthy and vigorons; and let them take care, lest the life-guards of health be defective in disease.

rectify those disorders arising either from their constitution, situation, or study. Therefore those who have digested well, may rise safely in the morning: he who has digested badly ought to rest; and if there be a necessity of rising, let him go to bed again. He who has not digested at all should remain perfectly quiet, and neither betake himself to labour, nor exercise, nor business. He who has eruptions of the crude ingesta, without pain of the præcordia, ought to drink cold water at intervals, and to restrain himself otherwise. But he ought to live in a house well lighted, having the summer breeze and winter sun, to shun the meridian sun, morning and evening colds, and also the mal-aria of rivers and stagnant pools; and above all, not to expose himself to the sun bursting through a cloudy sky, lest he be sometimes affected with heat, at other times with cold, which very often produce catarrhematic (18) affections. But these observations are more applicable to unhealthy places, in which they even cause pestilence. A person may be said to be in good health, when the morning urine is first white, then of a light red colour: that implies digestion to be going on; this, its being finished. When a person awakes, he ought to remain a little, and, unless it be winter, he ought to wash his mouth with plenty of cold water.

In the long days he ought to repose at noon (19), rather before, than after a meal:

mem potissimum totis noctibus conquiescere. Sin lucubrandum est, non post cibum id facere, sed post concoctionem. Quem interdiu vel domestica, vel civilia officia tenuerunt, huic tempus aliquod servandum curationi corporis sui est. Prima autem ejus curatio, exercitatio est, quae semper antecedere cibum debet: in eo, qui minus laboravit, et bene concoxit, amplior; in eo, qui fatigatus est, et minus concoxit, remissior. Commodo vero excent, clara lectio, arma, pila, cursus, ambulatio; atque haec non utique plana, commodior est; siquidem melius ascensus quoque et descensus, cum quadam varietate corpus movcat; nisi tamen id perquam imbecillum est. Melior autem est sub divo, quam in portico; melior, si caput patitur, in sole, quam in umbra; melior in umbra, quam parietes aut viridia efficiunt, quam quae tecto subest; melior recta, quam flexuosa. Exercitationis autem plerumque finis esse debet sudor, aut exerte lassitudo quae citra fatigationem sit: idque ipsum, modo minus, modo magis faciendum est. Ac ne his quidem, athletarum exemplo, vel certa esse lex, vel immodicus labor debet. Exercitationem recte sequitur, modo unctio, vel in sole, vel ad ignem; modo balneum, sed

TRANSLATION.

in winter especially, to rest the whole night: but if he be compelled to study by night, he ought not to do that after food, but after digestion. He whom either domestic or civil duties have occupied during the day, ought to set apart some time for the refreshment of his body: and his first care is exercise, which ought always to precede food: he who has digested well and laboured little, his exercise ought to be more powerful; but more gentle in him who is fatigued, and digested less. Reading aloud, the use of arms, the ball, running, and walking, are very convenient exercises; and the latter of which would be more advantageous, if not on a plane, since the body may be exercised better by an ascending and descending variety, unless it be very weak. And it is better in the open air than in a portico; better in the sun (if the head can bear it) than in a shade; better in a shade formed by walls or shrubberies, than that which is under a roof; a straight walk is better than a winding. But incipient perspiration ought generally to terminate the exercise, or at least, lassitude short of fatigue, and even in this itself it ought to be sometimes more, sometimes less. And indeed there ought to be no fixed rule, nor immoderate labour in these exercises, in imitation of the athletes. Unction very properly follows these exercises, sometimes; either in the sun, or before a fire; at another time a bath, but in a chamber as high,

conclavi quam maxime, et alto, et lucido, et spatiose. Ex his vero neutrum semper fieri oportet; sed saepius alterutrum, pro corporis natura. Post haec paulum conquiescere opus est. Ubi ad cibum ventum est, numquam utilis est nimia satietas; saepe inutilis nimia abstinentia: si qua intemperantia subest, tunc est in potionē, quam in esca. Cibus a salsamentis, oleribus, similibusque rebus melius incipit: tum caro assumenda est, quae assa optima, aut elixa est. Condita omnia duabus de causis inutilia sunt; quoniam et plus propter dulcedinem assumuntur, et quod modo par est, tamen ægris coneoquuntur. Secunda mensa bono stomacho nihil nocet, in imbecillo coacescit. Si quis itaque hoc parum valet, palmulas, pomaque, et similia melius primo cibo assumit. Post multas potionēs, quae aliquantum sitim excesserunt, nihil edendum est: post satietatem, nihil agendum. Ubi expletus est aliquis, facilius concoquit, si quidquid assumpsit, potionē aquæ frigidæ includit, tum paulisper invigilat, deinde bene dormit. Si quis interdiu se implevit, post cibum neque frigori, neque aestui, neque labori se debet com-

light, and spacious as possible. It is not incumbent that either of these should be done always, but very frequently, one or other as may be most agreeable to the peculiarity of the constitution. After these things it is necessary to rest a little. When food is about to be taken, satiety is injurious, so is too great abstinence; if there be any excess to be tolerated, it is safer in drinking than in eating. It is best to begin a meal with salt meats (20), vegetables and such like. After these, meat which is roasted or boiled is best. All condiments are injurious, from two causes, one is, that too much is taken on account of their being very palatable, and the other, that although the quantity be moderate, yet they are digested with difficulty. A dessert is not injurious to a healthy stomach, but generates acidity in a weak. Therefore if this organ be weak, he would better commence with dates, apples, and such like. Nothing should be eaten, after the thirst has been fully satisfied by a sufficiency of drink; after which, nothing should be done. When one has completed a meal, digestion is more easily effected by concluding whatever he has taken with a draught of cold water; then continuing awake for a little while, he may sleep well afterwards. If a person have eaten rather freely in the day time, he ought not to expose himself after it either to cold, heat, or labour; for these things do not injure an

CHAP. III.

SOME OBSERVATIONS APPLICABLE TO NEW INCIDENTS AND THE DIFFERENT CONSTITUTIONS, SEXES, AND AGES, AND SEASONS OF THE YEAR.

THE precepts hitherto delivered are almost of universal application; but there are new cases, and varieties of constitution, the difference of sexes, ages, and seasons of the year require particular observation. The transition from a healthy place to an unhealthy, or from an unhealthy to a healthy, is not very safe. It is better to pass from a healthy place to an unhealthy in the beginning of winter; from a sickly to a salubrious in the commencement of summer. Neither is it proper to surcharge the stomach with food after long privation; nor should privation succeed to a full diet. And a person runs some risk of his health who eats once or twice immoderately contrary to custom. Therefore, a rapid transition from too much labour to

bitus labor, sine gravi noxa est. Ergo, cum quis mutare aliquid volet, paulatim debet assuere. Omnem etiam laborem facilius vel puer vel senex, quam insuetus homo sustinet. Atque ideo quoque nimis otiosa vita utilis non est; quia potest incidere laboris neeesitas. Si quando tamen insuetus aliquis laboravit, aut si multo plus, quam solet, etiam is qui assuevit, huie jejuno dormiendum est: multo magis, si etiam os amarum est, vel oculi ealigant, aut venter perturbatur. Tum enim non dormiendum tantummodo jejuno est, sed etiam in posterum diem permanendum; nisi eito id quies sustulit. Quod si faetum est, surgere oportet, et lente paulum ambulare. At si somni neeesitas non fuit, quia modice magis aliquis laboravit, tamen ingredi aliquid eodem modo debet. Communia deinde omnibus sunt post fatigationem cibum sumpturis, ubi paulum ambulaverunt, si balneum non est, ealido loco, vel in sole, vel ad ignem ungi, atque sudare; si est, ante omnia in tepida resedere; deinde, ubi paulum eonquieverunt, intrare et deseendere in solium; tum multo oleo ungi, leniterque perfriari; iterum in solium descendere: post haec,

ORDO.

bor ex nimio otio sine noxa. Ergo cum quis volet mutare aliquid, debet assuere paulatim. Etiam vel puer vel senex sustinet omnem laborem facilius, quam insuetus homo. Atque ideo quoque vita nimis otiosa est non utilis; quia neecessitas laboris potest ineidere. Tamen si aliquis insuetus quando laboravit, aut si etiam is qui assuevit multo plus quam solet, est huie dormiendum jejuno: multo magis, si etiam os est amarum, vel oenli caligant, aut venter perturbatur. Enim tum non tautummodo est dormiendum jejuno, sed etiam permanendum in posterum diem; nisi quies sustulit id eito. Quod si est faetum, oportet surgere, et ambulare paulum lente. At si non fuit neeesitas somni, quia aliquis laboravit magis modice, tamen debet ingredi aliquid eodem modo.

Deinde sunt communia omnibus sumpturis eibum post fatigationem, ubi ambulaverunt paulum, si non est balneum, ungi, atque sudare ealido loco, vel in sole, vel ad ignem; si est, ante omnia resedere in tepida; deinde ubi eonquieverunt paulum intrare et deseendere in solium; tum ungi multo oleo, que perfriari leniter; iterum descendere in solium: post haec fovere os multa

TRANSLATION.

ease, or the sudden accession of too much ease after hard labour, is not unattended with serious danger. Consequently, when any change is contemplated, the transition ought to be very gradual. Even a boy or an old man sustains labour more easily than a man unaccustomed to it: and for this reason an over-indolent life is not conducive to health; because the necessity of labour may happen. Yet, if a person, unaccustomed at any time, or even one who has been innred, shold labour much more than usual, he ought to sleep with an empty stomach; particularly if he have a bitter taste in his mouth, or the eyes are dim, or the bowels disturbed. For then he must not only sleep with an empty stomach, but remain so the following day, unless rest has suddenly carried it off. If that has been done, he ought to get up and walk a little, slowly; but if a person has been at such moderate labour that there is no necessity for sleep, still he ought to walk in the same manner.

Here follow some general rules for those who are about to eat after fatigue: when they have walked a little, if there be not a bath, let them be anointed and perspire, either in a warm place or in the sun, or before the fire; if there be, first of all let them sit in the tepidarium, afterwards, when they have rested a little, to descend into the solium, then to be anointed with plenty of oil, to be rubbed gently, and again descend into the solium: after these being done, let the mouth be

os aqua calida sovere, deinde frigida. Balneum his fervens idoneum non est. Ergo si nimium alieni fatigato pene febris est, huie abunde est, loco tepido demittere se inguinibus tenuis in aquam calidam, eui paulum olei sit adjectum: deinde totum quidem corpus, maxime tamen eas partes, quae in aqua fuerunt, leniter perficare ex oleo, cui vinum et paulum contriti salis sit adjectum. Post haec, omnibus fatigatis aptum est cibum sumere, eoque humido uti; aqua, vel certe diluta potionē esse contentos; maximeque ea, quae moveat urinam. Illud quoque nosse oportet, quod ex labore sudanti frigida potio pernicioseissima est; atque etiam, cum sudor se remisit, itinere fatigatis inutilis. A balneo quoque venientibus Asclepiades inutilem eam judicavit: quod in iis verum est, quibus alvus facile, nec tuto, resolvitur, quique facile inhorreunt; perpetuum in omnibus non est, cum potius naturale sit, potionē æstuantem stomachum refrigerari. Quod ita præcipio, ut tamen fatear, ne ex haec quidem causa sudanti adhuc frigidum bibendum esse. Solet etiam prodesse, post varium cibum, frequentesque dilutas potionēs, vomitus, et postero die longa quies, deinde modica exercitatio.

TRANSLATION.

washed with warm water, afterwards with cold. A hot bath is improper for these: therefore, if a person be so over fatigued as almost to be feverish, it will be sufficient for him to lower himself as far as the groin in a tepid room in warm water, to which a little oil has been added; afterwards let the whole body be rubbed gently, more particularly those parts which have been in the water, with oil, to which some wine and a little powdered salt have been added.

Afterwards, it is proper for all persons that are fatigued to take food, and moisture with it; to be content with water, or at most diluted drink, particularly that which may prove diuretic. It is also necessary to know this, that cold water is most pernicious to a sweating person after labour, also to a person fatigued by a journey, even when the perspiration has abated. Asclepiades also has pronounced it injurious to those coming out of the bath: and he is correct with those who are easily relaxed, but not with safety to those who are liable to rigors: this is not a general rule, since it may be more natural for a heated stomach to be cooled by drink. Whilst I prescribe so, I confess at the same time that not even on this account should any thing be drunk by a person in a state of perspiration.

An emetic is usually advantageous after various food, and frequent diluted drinks, and on the following day a long rest and moderate exercise. If one be oppressed

ORDO.

calida aqua, deinde frigida. Fervens balneum non est idoneum his. Ergo si est pene nimium febris alieni fatigato, est abunde huie, demittere se loco tepido tenuis inguinibus in aquam calidam, eui paulum olei sit adjectum: deinde quidem perficare totum corpus leniter, tamen maxime eas partes quae fuerunt in aqua, ex oleo, cui vinum et paulum contriti salis sit adjectum.

Post haec est aptum omnibus fatigatis sumere cibum, que uti eo humido; esse contentos aqua, vel certe diluta potionē; que maxime ea que moveat urinam. Quoque oportet nosse illud, quod frigida potio est pernicioseissima sudanti ex labore; atque etiam cum sudor remisit se, (est) inutilis fatigatis itinere. Asclepiades quoque judicavit eam inutilem venientibus a balneo: quod est verum in iis, quibus alvus resolvitur facile, nec tuto, que qui inhorreunt facili; est non perpetuum in omnibus, cum sit potius naturale, æstuantem stomachum refrigerari potionē. Quod ita præcipio, ut tamen fatear, ne quidem ex haec causa frigidum esse bibendum adhuc sudanti.

Etiam vomitus solet prodesse, post varium cibum, que frequentes dilutas potionēs, et postero die longa quies, deinde modica exercitatio. Si assidua

Si assidua fatigatio urget, invicem modo aqua, modo vinum bibendum est, raroque balneo utendum. Levatque lassitudinem etiam laboris mutatio: eumque, quem novum genus ejusdem laboris pressit, id, quod in consuetudine est, refieit. Fatigato quotidianum eubile tutissimum est. Lassat enim quod contra consuetudinem, seu molle seu durum est. Proprie quædam ad eum pertinent, qui ambulando fatigatur. Hunc refieit in ipso quoque itinere frequens frictio; post iter, primum sedile, deinde unetio: tum ealida aqua in balneo magis superiores partes, quam inferiores foveat. Si quis vero exustus in sole est, huic in balneum protinus eundum, perfundendumque oleo eorpus et caput; deinde in solium bene ealidum descendendum est; tum multa aqua per caput infundenda, prius ealida, deinde frigida. At ei, qui perfixit, opus est in balneo primum involuto sedere, donee insudet; tum ungi; deinde lavari: eibum modicum, potionis meracas assumere. Is vero qui navigavit, et nausea pressus est, si multam bilem evomuit, vel abstinere cibo debet, vel paulum aliquid assumere: si pituitam aeidam effudit, utique sumere

ORDO.

fatigatio urget, modo aqua, modo vinum, est bibendum invicem, que utendum balneo raro. Que etiam mutatio laboris levat lassitudinem: que eum quem novum genus ejusdem laboris pressit, id, quod est in consuetudine, refieit. Fatigato quotidianum eubile est tutissimum. Enim quod est contra consuetudinem lassat, seu est molle, seu (est) durum. Quædam pertinent proprie ad eum, qui fatigatur ambulando. Frequens frictio quoque reficit hunc in itinere ipso; post iter, primum sedile, deinde unetio: tum foveat superiores partes, magis quam inferiores calida aqua in balneo. Vero si quis exustus est in sole, (est) hunc eundum protinus in balneum, que corporis et caput perfundendum oleo; deinde est descendendum in solium bene calidum; tum infundenda multa aqua per caput, prius ealida, deinde frigida. At est opus ei qui perfixerit involuto primum sedere in balneo, donec insudet; tum ungi; deinde lavari: assumere modicum eibum, (que) meraeas potionis. Vero is qui navigavit, et est pressus nausea, si evomuit multam bilem, debet vel abstinere cibo, vel assumere aliquid paulum: si effudit acidam pituitam, utique sumere eibum,

TRANSLATION.

with unremitting lassitude, a little wine, a little water must be taken alternately, and rarely use the bath. Also a change of labour relieves fatigue; and that labour, of which he is in constant practice, recruits him whom a new kind of the same labour debilitates. The daily couch is very convenient to a fatigued person: but even that, if contrary to habit, whether soft or hard, wearies.

There are some things peculiarly applicable to a man fatigued by walking. Frequent friction, even on the journey itself, refreshes him; at the end of the journey, first a rest, and then unction; afterwards, he may foment the lower extremities rather than the upper with warm water. But if a person has been scorched in the sun, he must go immediately to the bath and have oil poured over his head and body; afterwards, he must go into the solium very warm: there plenty of warm water is to be poured on the head, afterwards cold. But it will be necessary for him who has been chilled to be well wrapped up, and to sit in the laconium until he may perspire; then to be anointed; afterwards to bathe: to take food in moderation, and drink pure wine.

But he who has been to sea, and is troubled with nausea if he has vomited much bile, ought to abstain from food or to take very little; if he has ejected acid phlegm⁽²¹⁾ he may indeed take a little, but lighter than ordinary; if he has had

cibum, sed assueto leviorem: si sine vomitu nausea fuit, vel abstinere, vel post cibum vomere. Qui vero toto die, vel in vehiculo, vel in spectaculis sedit, huic nihil currendum, sed lente ambulandum est: lenta quoque in balneo mora, dein cœna exigua prodesse consueverunt. Si quis in balneo aestuat, reficit hunc ore exceptum, et in eo retentum, acetum: si id non est, codem modo frigida aqua assumpta.

Ante omnia autem norit quisque naturam sui corporis: quoniam alii gracieles, alii obesi sunt; alii calidi, alii frigidiores; alii humidi, alii sieci; alias adstricta, alias resoluta alvus excreet: raro quisquam non aliquam partem corporis imbecillam habet. Tenuis vero homo implere se debet, plenus extenuare, calidus refrigerare, frigidus calcificare, madens siccire, siccus madefacere: itemque alvum firmare is, cui fusa; solvere is, cui adstricta est: succurrendumque semper parti maxime laboranti est.

Implet autem corpus modica exercitatio, frequentior quies, unctio, et si post prandium est, balneum, contracta alvus, modicum frigus hieme, somnus et plenus et non nimis longus, molle cubile, animi securitas, assumpta per cibos et

ORDO.

sed leviorem (quam) assueto: si fuit nausea sine vomitu, (debet) vel abstinere, vel vomere post cibum. Vero qui sedit toto die, vel in vehiculo, vel in spectaculis, (est) hinc currendum nihil, sed est ambulandum lente: quoque lenta mora in balneo, dein exigua cœna consneverunt prodesse. Si quis aestuat in balneo, acetum exceptum (in) ore, et retentum in eo reficit hunc: si est non id, frigida aqua assumpta eodem modo.

Autem ante omnia quisque noverit naturam sui corporis: quoniam alii sunt gracieles, alii obesi; alii calidi, alii frigidiores; alii humidi, alii sieci; adstricta alvus excreet alias, resoluta alias: raro quisquam non habet aliquam imbecillam partem corporis. Vero tenuis homo debet implere se, plenus extenuare, calidus refrigerare, frigidus calcificare, madens siccire, siccus madefacere: que item is (debet) firmare alvum, eni fusa; is (debet) solvere cui est adstricta: que est semper succurrendum parti maxime laboranti.

Autem modica exercitatio implet corpus, frequentior quies, unctio, et si est post prandium, balneum, alvus contraeta, modicum frigus hieme, somnus et plenus, et non nimis longus, molle cubile, securitas animi,

TRANSLATION.

nausea without retching, he should refrain from food, or take an emetic after it. He who has sat the whole day, either in a chariot or at some exhibition, ought not to run at all, but to walk slowly; also to make a considerable stay in the bath, and then to sup lightly. If one become very warm in the bath, a little vinegar taken into the mouth and held there will refresh him: if that is not to be obtained, cold water to be taken in the same manner.

Bnt above all things every one should know the nature of his constitution: because some are slender, others fat; some are hot, others more cold; some are moist, others dry; constipated bowels trouble some, relaxed, others: there are very few who have not some weak part of the body. The slender man ought to improve his habit, the plethoric man should extenuate himself; one of warm temperament ought to cool himself, the cold man should make warm; the moist should dry, the dry should moisten; he who is of a relaxed habit ought to strengthen the bowels, and he who is costive should relax them; and that part, in particular, must be supported which is the weakest.

The body improves by moderate exercise, more frequent rest, unctio and a warm bath after dinner, costive bowels, moderate cold in winter, full sleep, but not too long, a soft bed, an easy mind, particularly all sweet and fat things taken

potiones maxime dulcia et pingua, cibus et frequenter et quantum plenissimus potest concoqui. Extenuat eorum aqua calida, si quis in eam descendit, magisque si salsa est; in jejuno balneum, inurens sol et omnis calor, cura, vigilia, somnus nimium vel brevis vel longus; lectus, per aestatem, terra; hieme, durum cubile: cursus, multa ambulatio omnisque vellemens exercitatio, vomitus, dejectio, aeidae res et austerae, et semel die assumpta, et vini non perfrigidi potio jejuno in consuetudinem adducta.

Cum vero inter extenuantia posuerim vomitum et dejectionem, de his quoque proprie quedam dieenda sunt. Ejetum esse ab Aselepiade vomitum in eo volumine, quod de tuenda sanitate composuit, video: neque reprehendo, si offensus eorum est consuetudine, qui quotidianie ejiciendo, vorandi facultatem molliuntur. Paulo etiam longius processit: idem purgationes quoque eodem volumine expulit. Et sunt ea perniciose, si nimis valentibus medicamentis fiunt. Sed haec tamen submovenda esse, non est perpetuum; quia corporum temporumque ratio potest ea facere necessaria, dum et modo, et non nisi cum opus est,

maxime dulcia et pingua assumpta per cibos et potionem, cibus et frequenter et quantum plenissimum potest concoqui. Calida aqua, si quis in eam descendit extenuat corpus, que magis si est salsa; balneum in jejuno, inurens sol et omnis calor, cura, vigilia, somnus nimium vel brevis, vel longus; terra, lectus per aestatem, durum cubile hieme; cursus, multa ambulatio, que omnis vellemens exercitatio, vomitus, dejectio, austerae et acidae res, et assumpta semel die, et potio vini non perfrigidi adducta in consuetudinem jejuno.

Vero cum posuerim vomitum et dejectionem inter extenuantia, quedam propria dicenda sunt quoque de his. Video vomitum esse rejectum ab Asclepiade, in eo volumine quod composuit de tuenda sanitate; neque reprehendo, si est offensus consuetudine eorum, qui ejiciendo quotidie, moluntur facultatem vorandi. Etiam processit paulo longius: idem (Ascl.) expulit purgationes quoque codem volumine. Et ea perniciose sunt, si fiunt nimis valentibus medicamentis. Sed tamen non est perpetuum, haec esse submovenda; quia ratio corporum que temporum potest facere ea necessaria, dum adhibeantur, et modo,

TRANSLATION.

with the food and drink, very frequent meals, and as much in quantity as can be digested.

The body is extenuated by going into warm water, and the more so, if it be salt; (also by) the bath fasting, a scorching sun, all heat, care, watching, either short or long sleep; the earth for a bed during the summer, and a hard couch in winter: running, much walking, and all violent exercise, vomiting, purging, acid and austere things, taken once in the day only, and to be brought into the use of drinking uncooled wines on an empty stomach.

But since I have arranged emetics and aperients among the attenuants, there is something particular to be said concerning them. I perceive that vomiting is rejected by Asclepiades in that treatise which he composed on the preservation of health; nor do I blame him if he has been offended with the practice of those, who, by vomiting daily, acquire a voracious appetite. But he has gone still farther; for in the same volume he has forbidden purgatives: and indeed they are injurious if composed of very powerful medicines: it is a general maxim and not without exceptions, for these things cannot be entirely dispensed with, because, constitutional peculiarities and seasons may render them necessary, provided they be employed both in moderation, and when there is a necessity; therefore he him-

adhibcantur. Ergo illc quoque ipse, si quid jam corruptum esset, expelli debere confessus est : ita non ex toto res condemnanda est. Sed esse ejus etiam plures causæ possunt; estque in ea quædam paulo subtilior obscrvatio adhibenda. Vomitus utilior est hicme, quam æstate: nam tum et pituitæ plus, et capitis gravitas major subest. Inutilis est gracilibus, et imbecillum stomachum habentibus: utilis plenis et biliosis omnibus, si vel nimium se replerunt, vel parum concoixerunt. Nam, sive plus est, quam quod concoqui possit, periclitari ne corrumpatur, non oportet: si vero corruptum est, nihil commodius est, quam id, qua via primum expelli potest, ejicere. Itaque, ubi amari ructus cum dolore et gravitate præcordiorum sunt, ad hunc protinus configiendum est. Idem prodest ci, cui pectus æstuat, et frequens saliva, vel nausca est; aut sonant aures, aut madent oculi, aut os amarum est: similiterque ci, qui vel cœlum, vel locum mutat; iisque, quibus, si per plures dies non vomucrunt, dolor præcordia infestat. Neque ignoro, inter hæc præcipi quietem: quæ non semper contingere potest agendi neces-

ORDO.

et non nisi em est opus. Ergo ille confessus est ipse quoque, si quid jam esset corruptum, debere expelli: ita res non est condemnanda ex toto. Sed etiam possunt esse plures causæ ejus; que quadam paulo subtilior obseratio est adhibenda in ea.

Vomitus est utilior hieme, quam æstate: nam tum subest et plus pituitæ, et major gravitas capitis. Gracilibus, et habentibus imbecillum stomaehum est inutilis; omnibus plenis et biliosis (est) utilis, si replerunt se vel nimium vel concoixerunt parum. Nam, sive est plus quam quod possit concoqui, non oportet periclitare ne corrumpatur: sive est corruptum, nihil est commodius quam id ejicere, qua primum via potest expelli, itaque ubi sunt amari ructus, eum dolore et gravitate præcordiorum, protinus configiendum est ad hunc.

Idem prodest ei, eui pectus æstuat, et est frequens saliva vel nausea; aut (eui) aures sonant, aut oculi madent, aut os est amarum: que similiter ei qui mutat vel cœlum vel locum; que iisque dolor infestat præcordia, si non vomuerunt per plures dies. Neque ignoro quietam præcipi inter hæc; quæ non potest contingere semper habentibus necessitatem agendi;

TRANSLATION.

self has confessed, that if any thing be vitiated, it ought to be expelled; so that this is not to be condemned entirely, since there may be many occasions for it, and to which a more particular diserimination must be directed.

A vomit is more useful in winter than in summer, because in that season there is more phlegm, and a greater heaviness of the head. It is injurious to those who are delicate and have weak stomachs; but it is useful to those who are of a full and bilious habit, if they have either taken too much or have digested badly: for if they have charged themselves with more than can be digested, they ought not to run the risk of its being tainted; or if it be already putrescent, nothing is more proper, than to eject it in the most expeditious manner attainable. Therefore when there are bitter eructations, with pain and heaviness of the præcordia, they must immediately administer this remedy.

It is also salutary to him who has a burning heat in the stomach, abundant saliva or nausea; or to him who has a singing in his ears, or watry eyes, or a bitterness in the mouth: also to one who removes out of one climate to a different one, and to those who are troubled with a pain of the præcordia, if they have not vomited for many days. Nor am I ignorant, that rest is ordered in these cases, which cannot always be obtained by those who are under the necessity of acting; nor has

sitatem habentibus; nee in omnibus idem facit. Itaque istud luxuriæ causa fieri non oportere confiteor; interdum valetudinis causa reete fieri, experimentis eredo: eum eo tamen, ne quis qui valere et senescere volet, hoc quotidianum habeat. Qui vomere post eibum volet, si ex facili facit, aquam tantum tepidam ante debet assumere; si difficultius, aquæ vel salis, vel mellis paulum adjieere. At qui mane vomiturus est, ante bibere mulsum, vel hyssopum, aut esse radiculam debet; deinde aquam tepidam, ut supra scriptum est, bibere. Cetera quæ antiqui medieci præepperunt, stomachum omnia infestant. Post vomitum, si stomachus infirmus est, paulum eibi, sed hujus idonei, gustandum, et aquæ frigidæ eyathi tres bibendi sunt; nisi tamen vomitus fauees exasperavit. Qui vomuit, si mane id fecit, ambulare debet, tum ungi, deinde coenare: si post eoenam, postero die lavari, et in balneo sudare. Huic proximus eibus medioeris utilior est; isque esse debet cum pane hesterno, vino austero meraeo, et earne assa, eibisque omnibus quam siccissimis. Qui vomere bis in mense vult, melius consultet, si biduo continuatur, quam si post quin-

ORDO.

nee facit idem in omnibus. Itaque confiteor oportere istud non fieri causa luxuriæ; credo experimentis, interdum fieri reete causa valetudinis; tamen cum eo, ne quis habeat hoc quotidianum, qui volet valere et senescere. Qui volet vomere post cibum, si facit ex facili, debet assumere tantum tepidam aquam ante; si (facit) difficultius (debet) adjicere paulum vel salis vel mellis aquæ. At qui est vomiturus mane, debet bibere mulsum ante, vel hyssopum aut esse radiculam; deinde bibere tepidam aquam, ut est scriptum supra. Omnia cætera, quæ antiqui medici præcipierunt infestant stomachum. Post vomitum, si stomachus est infirmus, paulum cibi gustandum, sed hujus idonei, et tres cyathi aquæ frigidæ sunt bibendi, nisi tamen vomitus exasperavit fauces. Qui vomuit, si fecit id mane, debet ambulare, tum ungi, deinde coenare; si (fecit) post eoenam, (debet) lavari, et sudare in balneo. Proximus huic mediocris cibus est utilior; que is debet esse cum pane hesterno, meraeo austero vino, et assa carne, que omnibus eibis quam siccissimis. Qui vult vomere bis in mense, consuet melius, si continuatur biduo, quam si vomuerit post quintum-

TRANSLATION.

it the same effect on all. Therefore I admit, that vomits should not be taken for the sake of indulging luxury: but from experience I believe they are often and properly administered for the sake of health; but I advise that no one should have these daily, who wishes to be healthy, and live to an old age.

When a person wishes to vomit after food, that he may do it the more easily, he ought only to take warm water before; if with more difficulty, he ought to add either a little salt or honey to the water; but he who is about to vomit in the morning, should first drink hydromel (22), or hyssop, or to eat radish, afterwards to drink warm water as prescribed above. All the other things which the ancient physicians have advised, disorder the stomach. After an emetic, if the stomach be weak, some proper food ought to be taken; and three cupfuls of cold water are to be drunk, if the fauces have been irritated by vomiting. He who has vomited in the morning, ought to walk, then to be anointed, afterwards to sup; but if after supper, he ought to bathe, and perspire in the bath on the following day. His next meal after this ought to be rather moderate, and to eat yesterday's bread, austere pure wine, roasted meat, and all the driest kinds of food. He who wishes to vomit twice in the month, will consult his health better, if it be done on two successive

tumdecimum diem vomuerit; nisi haec mora gravitatem pectori faciet. Dejeetio autem medicamento quoque pertenda est, ubi venter suppressus parum reddit, ex eoque inflationes, caligines, capitis dolorcs, aliaque superioris partis mala increscunt. Quid enim inter haec adjuvare possunt quies et inedia, per quae illa maxime eveniunt? Qui dejicere volet, primum cibis vinisque utatur iis, quae hoc praestant; dein, si parum illa proficiunt, aloës sumat. Sed purgationes quoque, ut interdum necessariae sunt, sic, ubi frequentes sunt, periculum afferunt. Assuescit enim non ali corpus; cum omnibus morbis obnoxia maxime infirmitas sit. Calcifacit autem unctio, aqua salsa, magisque si calida est, omnia salsa, amara, carnosa, si post cibum est, balneum, vinum austерum. Refrigerant in jejuno, et balneum, et somnus, nisi nimis longus est, et omnia acida; aqua quam frigidissima; oleum, si aqua miscetur. Humidum autem corpus efficit labor major, quam ex consuetudine, frequens balneum, eibus plenior, multa potio; post haec ambulatio, et vigilia: per se quoque ambulatio multa et vehemens, et matutinæ exercitationi non protinus cibus

decimum diem; gravitatem pectori faciat haec mora. Autem dejeetio est petenda quoque, medicamento, ubi, suppressus, venter reddit parum, que ex eo inflationes, caligines (ocnlorum), dolores capitis, que alia increscunt mala superioris partis. Enim quid possunt quies et inedia adjuvare inter haec, per quae illa (mala) maxime eveniunt? Qui volet dejicere (se) utatur iis cibus que vinis, quae praestant hoc primum; deinde si illa proficiunt parum, sumat aloës. Sed ut purgationes sunt quoque necessariae interdum, sic ubi sunt frequentes, afferunt periculum. Enim corpus non assuescit ali; eum infirmitas sit maxime obnoxia omnibus morbis.

Autem unctio ealefacit, (item) aqua salsa, que magis, si est calida, omnia salsa, amara, carnosa, balneum, si est post cibum, et austernum vinum. Et balneum refrigerat in jejuno, et somnus, nisi est nimis longus, et omnia acida; aqua quam frigidissima, oleum, si miscetur aqua. Autem major labor quam ex consuetudine efficit corpus humidum, frequens balneum, plenior eibus, multa potio; post haec, ambulatio, et vigilia: quoque multa et velueemens ambulatio per se, et cibus noui protinus adjectus exerceita-

TRANSLATION.

days, rather than repeat it on the fifteenth day, unless such an intermission should cause a pain at his chest.

When the bowels are constipated, so as to evacuate very sparingly, and from that cause, flatulencies, a dimness of sight, pains of the head, and other maladies of the superior parts increase, then an aperient will be advantageous: for what can rest or abstinence render in those disorders of which they are the exciting causes? He who wishes to relax his bowels, let him first use such food and wine as produce that effect: if these avail him but little, then let him take aloes. But purgatives, although sometimes necessary, yet when they are frequent, become dangerous: for by this the body will be deprived of its nourishment, consequently infirmity renders it the more susceptible of all diseases.

The body is warmed by unction, salt-water, and more so if it be warm, all salt meats, bitters, flesh, the bath if after food, and anstere wine; on the other hand, it is refrigerated by a bath before meals, sleep, unless it be too long, and all acids, the coldest waters, oil, if it be mixed with water, and lotus (23).

But the body is rendered moist by less exercise than usual, frequent bathing, full diet, and plenty of drink, a walk after this and vigilance. Also, walking much and very quick, has of itself the same tendency; and morning exercise, if not im-

adjectus: ea genera escae, quae veniunt ex locis frigidis, et pluviis, et irriguis. Contra siccatur modica exercitatio, fames, unctio sine aqua, calor, sol modicus, frigida aqua, cibus exercitationi statim subjectus, et is ipse ex siccis et aestuosis locis veniens.

Alvum adstringit labor, sedile, creta figuralis corpori illita, cibus imminutus, et is ipse semel die assumptus ab eo, qui bis solet; exigua potio, neque adhibita, nisi cum cibi quis quantum assumpturus est, cepit; post cibum quies. Contra solvit aucta ambulatio atque esca, motus qui post cibum est, subinde potionem cibo immixtæ. Illud quoque scire oportet, quod ventrem vomitus solutum comprimit, compressum solvit: itemque comprimit is vomitus, qui statim post cibum est; solvit is, qui tarde supervenit.

Quod ad ætates vero pertinet, inediām facillime sustinent mediæ ætates, minus juvenes, minime pueri et senectute confecti. Quo minus fert facile quisque, eo saepius debet cibum assumere; maximeque eo eget, qui increscit. Calida lavatio et pueris et senibus apta est. Vinum dilutius pueris, senibus meracius, neutri ætati, quæ inflationes movent. Juvenum minus,

ORDO.

tioni matutinæ; ea genera escae, quæ veniunt ex frigidis, et pluviis, et irriguis locis. Contra modica exercitatio siccatur, fames, unctio sine aqua, calor, modicus sol, frigida aqua, cibus statim subjectus exercitationi, et is ipse veniens ex siccis et aestuosis locis.

Labor (et) sedile adstringit alvum; creta figuralis illita corpori, imminutus cibus, et is ipse assumptus semel die ab eo qui solet bis; exigua potio, neque adhibita, nisi cum quis cepit quantum cibi (nt) est assumpturus; post cibum quies. Contra ambulatio aucta atque esca solvit; motus qui est post cibum, potionem immixtæ subinde cibo. Quoque oportet scire illud, quod vomitus comprimit solutum alvum, solvit compressum: que item is vomitus comprimit qui est statim post cibum; is solvit qui supervenit tarde.

Vero quod pertinet ad ætates, mediæ ætates sustinent inediām facillime, juvenes minus, pueri et confecti senectute minime. Quo quisque fert minus facile, eo debet assumere cibum sæpius; que eget eo maxime qui increscit. Calida lavatio est apta et pueris et senibus. Dilutius vinum pueris, meracius senibus, quæ neutri ætati moveat inflationes. Interest minus ju-

TRANSLATION.

mediately followed by food; and those kinds of food which come from cold, rainy, and marshy climates. On the other hand, immoderate exercise, hunger, unctio, heat without moisture, immoderate use of salt, cold water, food immediately after exercise, particularly that which comes from dry and hot climates, all tend to dry the body.

Labour astringes the bowels, a still posture, rubbing potter's earth on the body, diminished food, and that itself being taken once a day by him who is accustomed to take it twice; little drink, nor is this to be taken, until the repast is finished; and rest after food. On the other hand, increased walking and food relaxes the bowels, also exercise after a meal, and the drink to be commixt with it occasionally. It is also necessary to know this, that an emetic binds a relaxed habit, and loosens a costive one: a vomit immediately after food binds it; the same protracted has the opposite effect.

But with respect to the different ages, people in middle life sustain privation most easily; young men less, boys and worn out age least of all. In proportion to the ability of each age to support the cravings of hunger, so much the oftener ought they to take food; and he requires it most who is growing. Warm bathing is proper both for boys and old men. More diluted wine should be given to boys than to old men; but to neither, that which would generate flatulencies. It is of

quæ assumant, et quomodo eurentur, interest. Quibus juvenibus fluxit alvus, plerumque in senectute contrahitur: quibus in adolescentia fuit adstricta, saepe in senectute solvitur. Melior est autem in juvēne fusior, in sene adstrictior.

Tempus quoque anni considerare oportet. Hieme plus esse convenit; minus, sed meraeius bibere; multo pane uti, carne potius elixa, modice oleribus; semel die eibum eapere, nisi si nimis venter adstrictus est. Si prandet aliquis, utilius est exiguum aliquid, et ipsum siecum sine carne, sine potionē sumere. Eo tempore anni ealidis omnibus potius utendum est, vel ealorem moventibus. Venus tum non æque pernicioosa est. At vere paulum eibo demendum, adjieendumque potionē, sed dilutius tamen bibendum est; magis carne utendum, magis oleribus; transcundum paulatim ad assa ab elixis. Venus eo tempore anni tutissima est. Æstate vero et potionē et eibo sæpius corpus eget; ideo prandere quoque commodum est. Eo tempore aptissima sunt et caro et olus; potio quam dilutissima, ut et sitim tollat, nee corporis incendat; frigida lavatio, caro assa, frigidi cibi, vel qui refrigerent. Ut sæpius autem eibo utendum, sic exiguo est. Per

ORDO.

venum quæ assumant, et quomodo eurentur. Quibus juvenibus alvus fluxit, plerumque contrahitur in senectute: quibus fuit adstricta in adolescentia, saepe solvitur in senectute. Antem fusior (alvus) est melior in juvēne, adstrictior in sene.

Quoqne oportet considerare tempus anni. Convenit esse plus hieme; bibere minns, sed meraeius; uti multo pane, potius elixa carne, modice oleribus; capere eibum semel die, nisi, si venter est nimis adstrictus. Si aliquis prandet est utilius sumere aliquid exiguum, et ipsum siecum, sine carne, sine potionē. Eo tempore anni est utendum omnibus calidis, vel moventibus calorem. Tum venus non est æque perniciosa.

At vere paulum demendum cibo, que adjiciendum potionē; sed tamen bibendum est dilutius; utendum magis carne, magis oleribus; transeundum paulatim ab elixis ad assa. Venus eo tempore anni est tutissima.

Vero zestate corpus eget sæpius et potionē et cibo: ideo quoqne est commodum prandere. Et caro, et olus sunt aptissima eo tempore; potio quam dilutissima, ut et tollat sitim, nec incendat corpus; frigida lavatio, assa caro frigidi cibi, vel qui refrigerent. Autem ut est utendum cibo sæpius, sic exiguo.

TRANSLATION.

less importance what food young men take, or how it is prepared. Those who are of a constipated habit while young, are generally relaxed in old age: and those who are relaxed in their youth, are for the most part costive in their old age. It is better for a youth to be more free in his bowels, and for an old man to be bound.

It is also necessary to consider the season of the year. It is proper to eat more in winter; to drink less, but more pure; to use plenty of bread, boiled meat in preference, vegetables moderately; to take food once in the day, unless the bowels are over costive. If one dines, it is better to take some little thing, and that dry, without flesh, and without drink. In that season of the year, all warm things, or calefacients ought to be used. Nor is venery so injurious then.

In spring a little is to be taken away from the food, the drink increased, but more diluted; more meat and vegetables are to be used, and to pass gradually from boiled to roast meat. Venery is most safe in that season of the year.

But in summer the body requires both meat and drink more frequently: on that account it is proper to dine. Both meat and vegetables are proper in that season, but the drink as much diluted as possible, that it may at once allay thirst and not inflame the body; cold bathing, roasted meat, cold food, or that which may cool. As it will be necessary to take more often, so it ought to be in small portions.

autumnum vero, propter cœli varieta-
tem, perieulum maximum est. Itaque

TRANSLATION.

During the autumn there is the greatest danger on account of the variations of atmosphere. Therefore one should neither go out without a robe, nor without shoes, especially on the colder days, nor sleep under the open air by night, or at least to be well covered. Now, a fuller diet is allowable, the drink less, but more pure. Some persons imagine that apples(24) are injurious, which are taken immoderately for the most part the whole of the day, and no adequate abatement made from the more solid food: therefore the evil does not arise from these fruits, but from the aggregate of all that is taken: for none of them contribute less to it than these. Therefore it is not fit that they should be used oftener than other food.

Lastly, it is necessary for some part of the more solid food to be withheld when this is added. Indeed venery is neither salutary in summer nor in autumn; however, it is more supportable in autumn; but in summer there ought to be a total abstinence from it if possible.

CHAP. IV.

RULES FOR THOSE WHO ARE AFFECTED IN SOME OTHER PART OF THE BODY, AND FIRST, OF THOSE WHO HAVE SOME INFIRMITY OF THE HEAD.

I COME now to speak of those who have a weakness in some particular part of the body. He who has a weakness in the head, if he has digested well, ought to rub it gently with his hands in the morning, and never to cover it with a robe, if possible, or the hair to be ent close to the skin; it will benefit him to avoid moon-light, and particularly before her conjunction with the sun, but never to go out after food: if he have hair, let him comb it every day; to walk much, neither under a roof, nor in the sun if possible; but particularly to avoid the heat of the sun after food or wine: rather anoint than bathe, and the unction should never be performed before a flame, rather before a live coal. If he come into a bath, he ought to sweat first a little under a garment in the tepidarium, to be anointed there, and then to go into the calidarium; when he has perspired there, he is not to descend into the solium, but to pour plenty of hot water over the head and whole of the body, then tepid water in the same way, and lastly cold; the last is to

caput, quam ceteras partes perfundere; deinde id aliquandiu perficare; novissime detergere et ungere. Capiti nihil aequae prodest arque aqua frigida: itaque is, cui hoc infirmum est, per aestatem id bene largo canali quotidie debet aliquandiu subiecere. Semper autem, etiamsi sine balneo unctus est, neque totum corpus refrigerare sustinet, caput tamen aqua frigida perfundere. Sed cum ceteras partes attingi nolit, demittere id, ne ad cervices aqua descendat; eamque, ne quid oculis, aliisve partibus noceat, defluentem subinde manibus ad hoc regerere: Huic modicus cibus necessarius est, quem facile concoquat; isque, si jejuno caput laeditur, asswendus etiam medio die est; si non laeditur, semel potius. Bibere huic assidue vinum dilutum, lene, quam aquam magis expedit; ut, cum caput gravius esse coepit, sit quo confugiat: eique ex toto neque vinum, neque aqua semper utilia sunt; medicamentum utrumque est, cum invicem assumuntur. Scribere, legere, voce contendere, huic opus non est, utique post cœnam; post quam ne cogitatio quidem ei satis tuta est: maxime tamen vomitus alienus est.

ORDO.

fundere ea caput diutins quam cæteras partes; deinde perficare id aliquandiu, novissime detergere et ungere.

Nihil prodest aequae capitati atque frigida aqua: itaque is, cui hoc est infirmum, debet subiecere id aliquandiu quotidie canali bene largo per aestatem. Autem semper etiamsi est unctus sine balneo, neque sustinet refrigerare totum corpus, tamen perfundere caput frigida aqua. Sed cum nolit cæteras partes attingi, demittere id, ne aqua descendat ad cervices, que regerere eam defluentem ad hoc subinde manibus, ne noceat quid oculis, vel aliis partibus. Modicus cibus est necessarius huic quem concoquat facile; que is est assumendum etiam medio die, si caput laeditur jejuno, si non laeditur, potius semel. Expedit magis huic bibere lene dilutum vinum assidue, quam aquam, ut cum caput coepit esse gravius, sit quo confugiat que neque sunt vinum neque aqua ex toto semper utilia ei. Utrumque est medicamentum cum assumitur invicem, non est opus huic, scribere, legere, contendere voce utique post cœnam; post quam nequidem cogitatio est satis tuta ei: tamen vomitus (est) maxime alienus.

TRANSLATION.

be continued longer on the head than on the other parts; afterwards to rub it for some time; lastly, to dry and anoint.

Nothing does the head so much good as cold water; therefore, he who has such an infirmity ought to submit it daily for some time to a full stream during the summer. And even if he has anointed without a bath, nor can sustain a shock over the whole body, yet he ought always to pour cold water upon his head. But when he is unwilling to have the other parts of his body touched, he ought to incline his head in such a manner that the water may not fall on his neck, and to dash back the flowing stream occasionally with his hands, lest it may offend his eyes or any other part. Moderate diet is necessary for him, which is more easily digested; and that must be taken in the middle of the day, if the head ache on an empty stomach; if not, once a day is more eligible. Mild diluted wine is more expedient for him to drink than water, that when his head grows worse he may have something to resort to: neither is it proper for him to drink wine always, nor water; each of them is a remedy when taken alternately. He must neither read nor write, nor declaim after supper; after which, not even thinking is sufficiently safe for him; a vomit to this man would prove highly deleterious.

CAP. V.

DE HIS QUI LIPPITUDINE, GRAVEDINE,
DESTILLATIONE, TONSILLISQUE LA-
BORANT.

NEQUE vero his solis, quos capitis imbeillitas torquet, usus aquæ frigidæ prodest; sed iis etiam, quos assiduæ lippitudines, gravedines, destillationes, tonsillaæque male habent. His autem non eaput tantum quotidie perfundendum, sed os quoque multa frigida aqua fovendum est; præeipueque omnibus, quibus hoc utile auxilium est, eo utendum est, ubi gravius cœlum Austri reddiderunt. Cumque omnibus inutilis sit post eibum aut contentio, aut agitatio animi; tum iis præeipue, qui, vel capitis, vel arteriæ dolores habere conserunt, vel quoslibet alios oris affectus. Vitari etiam gravedines, destillationesque possunt, si quam minime, qui his opportunus est, loca aquasque mutat; si caput in sole protegit, ne incendatur, neve subitum ex repentina nubilo frigus id moveat; si post concoctionem jejunus caput radit; si post cibum neque legit, neque scribit.

ORDO.

CAP. V.

DE HIS QUI LABORANT LIPPI-
TUDINE, GRAVEDINE, DESTIL-
LATIONE QUE TONSILLIS.

VERO neque usus frigidæ aquæ prodest his solis quos imbeillitas capitis torquet, sed etiam iis, quos assiduæ lippitudines, gravedines, destillationes, que tonsillaæ habent male. Autem his non tantum caput est perfundendum quotidie, sed quoque os (est) fovendum multa frigida aqua, que est utendum eo præcipue omnibus quibus hoc auxilium est utile, ubi Anstri reddiderunt cœlum gravius. Qne cum (est) contentio, aut cogitatio animi sit inutilis omnibus post eibum, tum præcipue his qui consueverunt habere vel dolores capitis, vel arteriæ, vel quoslibet alios affectus oris. Etiam gravedines que destillationes possint vitari. Si is, qui est opportunus his, mutat aerem quam minime, loca, que aquas, si protegit caput in sole, ne incendiatur, vel ne subitum frigus ex repentina nubilo moveat id; si jejunus radit post concoctionem; si neque legit, neque scribit post cibum.

TRANSLATION.

CHAP. V.

OF LIPPITUDO, CATARRH, AND DISORDERS OF THE TONSILS.

BUT the application of cold water is not limited to those only who have pains in the head; but is advantageous to those who have lippitudo, heaviness in the head, catarrhs, and diseased tonsils. They must not only pour cold water ou the head every day, but wash their mouths also with plenty of it; and it ought to be used by those especially who find relief from it, when the south winds have rendered the air noxious. And as every effort or agitation of mind is injurious after meals to all, it is more especially to those who are liable to pains in their heads, or any other affection of the mouth or larynx(25). A person subjeet to these complaints may esceape them by changing his air, situation, and water as little as possible; let him proteet his head from the sun, lest it be scorched by heat or affected by cold by the sudden intervention of a cloud; also let him shave his head on an empty stomach after digestion, and neither read nor write after meals.

CAP. VI.

AD SOLUTUM ALVUM REMEDIA.

QUEM vero frequenter cita alvus exercet, huic opus est pila similibusque superiores partes exercere; dum jcjunus est, ambulare; vitare solem, continua balnea; ungi citra sudorem; non uti cibis variis, minimeque jurulentis, aut leguminibus, oleribusve iis, quae celeriter descendunt; omnia denique sumere, quae tarde concoquuntur. Venatio, durius pisces, et ex domesticis animalibus assa caro maxime juvant. Numquam vinum salsum bibere expediet, ne tenue quidem, aut dulce; sed austernus, et plenius, neque idipsum pervetus. Si mulso uti volet, id ex decocto melle faciendum est. Si frigidæ potiones ventrem ejus non turbant, his utendum potissimum est. Si quid offensæ in cœna sensit, vomere debet; idque postero quoque die facere: tertio, modici ponderis panem ex vino esse, adjccta uva ex olla, vel ex defruto, similibusque aliis: deinde ad consuetudinem redire. Semper autem post cibum conquiescere, ac neque intendere animum, neque ambulatione quamvis leni dimoveri.

TRANSLATION.

CHAP. VI.

RELAXATIONS OF THE BOWELS AND TREATMENT.

THE man who is troubled with a frequent relaxation of the bowels ought to exercise the upper parts with the ball and such like motions; to walk while his stomach is empty; to avoid the sun; constant bathing; to be anointed until perspiration begins; not to use a variety of food, particularly stews, pulse, and pot-herbs, all of which pass quickly through; in short, to take all such things as are slowly digested. Venison, firm fish, and the roasted meat of domestic animals aid much.

It is never expedient to drink salt wine(26), nor even diluted or sweet wine, but the austere, of a full body, and not very old. If he choose to take hydromel, it must be prepared with boiled honey. If the bowels be not disturbed by cold drinks he ought to use these principally. If any thing has disagreed with him at supper, he ought to take an emetic, and to repeat it on the day following; on the third day to eat a small portion of bread dipped in wine, or preserved grapes, or indefructum(27) and things of a like nature: afterwards to return to his ordinary mode of living. After food always to rest, and neither to apply his mind, nor to be agitated by walking however gently.

ORDO.

CAP. VI.

REMEDIA AD SOLUTUM ALVUM.

VERO quem alvus exercet cita, est opus huic exercere superiores partes pila, que similibus: dnm est jejunus ambulare; vitare solem; continua balnea; ungi etra sudorem; non uti variis cibis, que minime jurulentis, aut leguminibus, vel his oleribus quae descendunt celeriter; denique sumere omnia, quae concoquuntur tarde. Venatio que duri pisces et assa earo ex domesticis animalibus juvant maxime.

Expedit numquam bibere salsum viuum, ne quidem tenue, aut dulce, sed plenius, et austernus, neque idipsim pervetus. Si volet uti mulso, id est faciendum ex decocto melle. Si frigidæ potiones non turbant ventrem ejus, est utendum his potissimum. Si sensit quid offensæ in cœna, debet vomere; que facere id quoque postero die: tertio, esse panem modici ponderis, ex vino uva ex olla adjecta, vel ex defruto, que aliis similibus: deinde redire ad consuetudinem. Autem semper conquiescere post cibum, ac neque intendere animum, neque dimovere ambulatione quamvis leni.

CHAP. VIII.

THE MANAGEMENT OF A WEAK STOMACH.

IF a person be troubled with dyspepsia he ought to read aloud; after reading to walk, then to exercise himself with the ball or arms, or any other movement by which the superior parts are put in motion: not to drink water on an empty stomach, but hot wine; to take food twice a day, but only as much as he can easily digest; to use

tenui et austero, et post cibum frigidis potionibus potius. Stomachum autem infirmum indicant pallor, macies, præcordiorum dolor, nausca, et nolentium vomitus, in jejuno dolor capitum. Quæ in quo non sunt, is firmi stomachi est. Neque credendum utique nostris est, qui cum in adversa valetudine vinum aut frigidam aquam concupiverunt, deliciarum patrocinium in accusationem non merentis stomachi habent. At qui tarde concoquunt, et quorum ideo præcordia inflantur, quive propter ardorem aliquem noctu sitire consuerunt, ante quam conquiescant, duos tresve cyathos per tenuem fistulam bibant. Prodest etiam adversus tardam concoctionem clare legere, deinde ambulare, tum vel ungi vel lavari, assidue vinum frigidum bibere, et post cibum, magnam potionem, sed, ut supra dixi, per siphonem: deinde omnes potiones aqua frigida includere. Cui vero cibus acescit, is ante eum bibere aquam egelidam debet, et vomere: at si cui ex hoc frequens dejectio incidit, quoties alvus ei constiterit, frigida potionem potissimum utatur.

ORDO.

et potius frigidis potionibus post cibum. Autem pallor, macies, dolor præcordiorum, nausea et vomitus nolentium, dolor capitum in jejuno, indicant infirmum stomachum. In quo quæ non sunt, is est firmi stomachi. Neque est credendum utique nostris, qui cum concupiverunt vinum aut frigidam aquam in adversa valetudine, habent patrocinium deliciarum in accusationem stomachi non increntis.

At qui concoquunt tarde, et præcordia quorum ideo inflantur, ve qui propter aliquem ardorem consuerunt sitire noctu, bibant duos vel tres cyathos per tenuem fistulam, ante quam conquiescant. Etiam prodest adversus tardam concoctionem legerc clare, deinde ambulare, tum vel ungi vel lavari, bibere frigidum vinum assidue, et post cibum, magnam potionem, sed, ut dixi supra, per siphonem: deinde includere omnes potiones aqua frigida. Vero cui cibus acescit, is debet bibere egelidam aquam ante eum, et vomere: at si frequens dejectio incidit cui ex hoc, quoties alvus constiterit ei, utatur potissimum frigida potionem.

TRANSLATION.

diluted and sharp wine; and rather cold drinks after food. But paleness, leanness, pains of the præcordia, nausea, and involuntary vomiting, pain of the head when the stomach is empty, are all indications of that organ being in a weak state. In those persons where these signs are absent, the stomach is strong. Neither must we credit our countrymen, who, when they are indisposed, eagerly call for wine or cold water, and defend their luxury under the pretext that the stomach is unmindful of its office.

But those who digest slowly, and for this reason the stomach becomes inflated, or who, on account of heat, are accustomed to be thirsty during the night, may drink two or three cupfuls through a small tube before going to rest. It assists a tardy digestion also, to read aloud, then to walk, afterwards either to be anointed or bathe; to drink constantly cold wine, and after meals to drink freely, but in the manner I directed above, by a syphon; and to conclude all by cold water. But he whose food becomes acescut in the stomach, should drink warm water previously, to excite vomiting. Should a purging ensue from this, as soon as the bowels become settled, he ought to use cold drinks principally.

CAP. IX.

QUOD OBSERVANDUM SIT DOLORE
NERVORUM LABORANTIBUS.

Si cui vero dolere nervi solent, quod in podagra chiragrave esse consuevit, huic, quantum fieri potest, exerceendum id est, quod affectum est, objiciendumque labori et frigori; nisi cum dolor increvit; sub quo quies optima est. Venus semper inimica est; concoctio, sicut in omnibus corporis affectibus, necessaria. Cruditas enim id maxime laedit, et quoties offendit corpus est, vitiosa pars maxime sentit.

Ut concoctio autem omnibus vitiis occurrit, sic rursus aliis frigus, aliis calor: quae sequi quisque pro habitu corporis sui debet. Frigus inimicum est seni, tenui, vulneri, praecordiis, intestinis, vesicæ, auribus, coxis, scapulis, naturalibus, ossibus, dentibus, nervis, vulvæ, cerebro: idem summam cutem facit pallidam, aridam, duram, nigram; ex hoc horrores tremoresque nascuntur. At prodest juvenibus, et omnibus plen:

CHAP. IX.

ON THOSE WHO LABOUR UNDER AFFECTIONS OF THE NERVES.

BUT if a person be subject to pains of the nerves, such as is common in gout of the feet or hands, he ought as much as possible to exercise that part which is affected, and to be exposed to labour and cold; unless the pain has become violent, and in that case rest is best. Venery is always inimical in these complaints. Digestion is necessary in this, as in all other affections of the body. For crudity injures it most; and as often as the body is deranged, (or rather the digestive organs are at fault,) the parts affected feel it most.

But as digestion opposes all diseases, so in the same way again, some are opposed by cold, others by heat: and which each person ought to follow, according to the nature of his body. Cold is inimical to an old or delicate person, to a wound, the praecordia, intestines, bladder, ears, hips, shoulders, private parts, teeth, bones, nerves, womb, and brain. It also renders the surface of the skin pale, hard, dry, and black; from this proceed shiverings and tremors. But it benefits young per-

nis: erectiorque mens est, et melius con-
coquitur, ubi frigus quidem est, sed ca-
vetur. Aqua vero frigida infusa, præ-
terquam capiti, etiam stomacho prodest:
item articulis doloribusque, qui sunt
sine ulceribus: item rubicundis nimis
hominibus, si dolore vacant. Calor
autem adjuvat omnia, quæ frigus in-
festat: item lippientes, si nec dolor,
nec lacrimæ sunt; nervos quoque, qui
contrahuntur; præcipueque ea ulcera,
quæ ex frigore sunt: idem corporis co-
lorem bonum facit; urinam movet. Si
nimius est, corpus effeminat, nervos
emollit, stomachum solvit. Minime
vero aut frigus aut calor tuta sunt, ubi
subita insuetis sunt. Nam frigus, la-
teris dolores, aliaque vitia; frigida
aqua, strumas excitat: calor concoctionem
prohibet, somnum aufert, sudore
digerit, obnoxium morbis pestilentibus
corpus efficit.

ORDO.

TRANSLATION.

sons, and all those who are of a full habit. The mind is more firm, and indeed when it is cold, digestion goes on better, but due care should be taken to guard against it. Cold water poured on, not only profits the head but the stomach also: and also pains in the joints which are not ulcerated; and to persons who are too ruddy, if they be free from pain. Heat favours whatever cold hurts; those having blear eyes, if they have neither pain nor a suffusion of tears; also contracted nerves, and particularly those ulcers which are produced by cold; produces a good colour of the body, and promotes the excretion of urine. If it be too great it debilitates the body, softens the nerves, and relaxes the stomach. But neither cold nor heat is by any means safe coming suddenly upon persons unaccustomed to it. Now cold excites pain in the side, and other complaints; and cold water causes strumous diseases: heat prevents digestion, takes away sleep, it is the great agent in decomposing the body by perspiration, and renders it the more obnoxious to pestilential diseases.

CHAP. X.

PESTILENTIAL DISEASES.

THERE are some things to be observed in a pestilential season, even by a man who is as yet in good health, but yet cannot be secure. At that time it is proper to travel, and to sail: when that is not attainable, to use gestation, gentle walking in the open air before the heat of the day, and nnection with the same moderation, and as it has been directed above, to avoid fatigue, crudity, cold, heat, and venery, and confine himself to a strict regimen. If he feel any heaviness about the body, then he is neither to rise in the morning, nor walk barefooted at any time, particularly after meals or the bath: nor to vomit either with an empty stomach, or after supper: nor are the bowels to be relaxed, and if they beeome loose of themselves, they must be restrained. Abstinence must be observed, if the body be plethoric. Also the bath must be avoided, sweating, the meridian nap, particularly if food have preceded it, at which time food should be taken rather once in the day, and even that sparingly, lest it may cause indigestion: one day water, next day wine is to be drunk, and so on every alternate day. These regulations being observed, there ought to

ex reliqua victus consuetudine quam minimum mutari debet. Cum vero hæc in omni pestilentia facienda sint, tum in ea maxime, quam Austri excitarint. Atque etiam peregrinantibus eadem necessaria sunt, ubi gravi tempore anni discesserunt ex suis sedibus, vel ubi in graves regiones venerunt. Ae si cetera tres aliqua prohibebit, utique abstinere debebit: atque ita a vino ad aquam, ab hæc ad vinum, eo, qui supra positus est, modo, transitus ei esse.

ORDO.

mutari quam minimum ex reliqua consuetudine. Vero cum hæc sint facienda in omni pestilentia, tum maxime in ea, quam Austri excitarint. Atque etiam cadiunt sint necessaria peregrinantibus, ubi discesserunt ex suis sedibus gravi tempore anni, vel ubi venerunt in graves regiones. Ac si aliqua res prohibebit cetera, utique debebit abstinere: atque ita ei transitus esse a vino ad aquam, ab hac ad vinum, co modo, qui est positus supra.

TRANSLATION.

be little or no deviation from the usual diet. But as these rules are applicable in all pestilential times, they must be more strictly adhered to in those, caused by the south winds. The same precautions are necessary for travellers who are about to leave their residences in the sickly season of the year, or when they have arrived in some unhealthy region. But if any circumstance shall prohibit a compliance with all these things, it will be strictly necessary for a person to live abstemiously; and that the transition may be thus:—from wine to water—from this to wine, in that manner which has been directed above.

THE SECOND BOOK

OF

AURELIUS CORNELIUS CELSUS

ON MEDICINE.

INTRODUCTION.

THERE are many diagnostic signs of an incipient disease. In the explication of which, I shall not hesitate to use the authority of the ancients, and most particularly that of Hippocrates; since the more modern physicians, although they have deviated in the mode of treatment, yet confess that he has delivered the most accurate prognoses from these signs. But before I speak of those precursors, which excite an apprehension of lurking diseases, it may not be improper to explain what seasons of the year, what kinds of weather, what times of life, what constitutions are most safe from, or most susceptible of diseases, and what kinds are most to be feared in each of these. Not but men of all ages and all habits become sick

CHAP. I.

OF THE DIFFERENT SEASONS, WEATHER, AGES, CONSTITUTIONS, AND THE DISEASES PECULIAR TO EACH.

Now the most salubrious season is the spring, next after this, the winter: the summer is more dangerous: but the autumn is by far the most dangerous. But of all seasons, those of equal temperatures are the best, whether cold or hot: the worst are those which vary most. By which it happens, that the autumn carries off the greatest number. For generally the meridian sun is hot; the night and morning, and even the evening too, are cold. Therefore the body being relaxed by the preceding summer, and the frequent meridian heats

cipitur. Sed ut eo tempore id maxime fit, sic quandoeumque evenit, noxium est. Ubi æqualitas autem est, tamen saluberrimi sunt sereni dies; meliores pluvii, quam tantum nebulosi, nubilive: optimique hieme, qui omni vento vacant; æstate, quibus Favonii perflant. Si genus aliud ventorum est, salubriores Septemtrionales, quam Subsolani, vel Austri sunt: sie tamen hæc, ut interdum regionum sorte mutantur. Nam fere ventus ubique a mediterraneis regionibus veniens, salubris; a mari, gravis est. Neque solum in bono tempestatum habitu certior valetudo est; sed priores morbi quoque, si qui incederunt, leviores sunt, et promptius finiuntur. Pessimum ægro cœlum est, quod ægrum feet; adeo ut in id quoque genus, quod natura pejus est, in hoc statu salubris mutatio sit.

At ætas media tutissima est, quæ neque juventæ calore, neque senectutis frigore infestatur. Longis morbis senectus, acutis adolescentia magis patet. Corpus autem habilissimum quadratum est, neque graile, neque obesum. Nam longa statura, ut in juventa deoora est, sic matura senectute confieitur: graile corpus infirmum, obesum hebes est. Vere tamen maxime, quæcumque hu-

ORDO.

cipitur frigore. Sed ut id fit maxime eo tempore, sic quandoeumque evenit, est uoxium. Autem ubi est æqualitas, tamen sereni dies sunt saluberrimi; pluvii meliores, quam nebulosi tantum, ve nubili: que optimi hieme, qui vacant omni vento; æstate, quibus Favonii perflant. Si est aliud genus ventorum, Septemtrionales sunt salubriores, quam Subsolani, vel Austri: tamen sie, ut interdum hæc mutantur sorte regionum. Nam ubique ventus veniens a mediterraneis regionibus, est fere salubris, a mari, (est fere) gravis. Neque solum est valetudo certior in bono habitu tempestatum; sed quoque priores morbi, si qui inciderunt, sunt leviores, et finiuntur promptius. Cœlum quod fecit ægrum est pessimum ægro, adeo ut quoque, in hoc statu mutatio in id genus, quod est pejus natura, sit salubris.

At media ætas est tutissima, quæ neque infestatur, ealore juventæ, neque frigore senectutis. Senectus patet magis longis morbis, adolescentia (patet magis) acentis. Autem habilissimum corpus est quadratum, neque graile, neque obesum. Nam longa statura, est deoora ut in juventa, sie confieitur in matra senectute: gracile corpus est infirmum, obesum (est) hebes. Tamen vere quæ-

TRANSLATION.

of autumn, is seized on by sudden cold. But, as it mostly occurs at this season, so whenever it does happen, it is most noxious. When there is an equality of temperature, the serene days are the most salubrious: the rainy are better than those only misty, or cloudy: and in winter those days are best when there is no wind at all; in summer those on which the westerly breezes blow. If the wind be from any other point, the northerly are more salutary than the easterly or southerly: yet these things are so, that they may be changed by the position of countries. For generally a wind coming from an over-land region is salutary every where, one from the sea is pestiferous. Not only is health more certain, in a good state of the temperature, but even former diseases, if any have happened, are lighter, and sooner removed. That air is the most baneful to a patient which has produced his disease; so that in this state a change even to that, which by its nature is worse, may be salutary.

But the middle age is most safe, which is neither endangered by the heat of youth, nor by the frigidity of old age. Old age is more liable to chronic diseases, and youth to acute ones. A square figure, neither too slender nor too fat, is the most suitable form to endure the vicissitudes of life. For a tall stature, although it is graceful in youth, so it quickly wears out by premature age: a slender body is

moris motu novantur, in metu esse eonserunt. Ergo tum lippitudinis, pustulae, profusio sanguinis, abscessus corporis, quae ἀποστήματα Graeci nominant, bilis atra, quam μελαγχολίαν appellant, insania, morbus eomitialis, angina, gravedines, destillationes oriri solent. Ii quoque morbi, qui in artieulis nervisque modo urgent, modo quiescunt, tum maxime et inchoantur et repetunt. At æstas non quidem vacat plerisque his morbis; sed adjicit febres, vel continuas, vel ardentes, vel tertianas, vomitus, alvi dejectiones, auricularum dolores, uleera oris, cancros, et in ceteris quidem partibus, sed maxime obsecenis; et quidquid sudore hominem resolvit.

Vix quidquam ex his in autumnum non incidit: sed oriuntur quoque eo tempore febres incertæ, lienis dolor, aqua inter eutem, tabes, quam Graeci φθίσιν nominant; urinæ difficultas, quam στραγγούριαν appellant; tenuioris intestini morbus, quem εἰλεόν nominant; lævitas intestinorum, quæ λειεντερία vocatur; eoxæ dolores, morbi eomitiales. Idemque tempus et diutinis malis fatigatos, et ab æstate tantum proxima pressos interimit; et alias novis morbis

cumque novantur motu humoris, consuerunt esse maxime in metu, Tum ergo lippitudines, pustulae, profusio sanguinis, abscessus corporis, que Graeci nominant ἀποστήματα (apostemata), atra bilis, quam appellant μελαγχολίαν (melancholia), insania, comitialis morbus, angina, gravedines, destillationes solent oriri. Quoque ii morbi qui modo urgent in artieulis que nervis, modo quiescunt, et tum maxime inchoantur et repetunt. At quidem æstas non vacat his plerisque morbis; sed adjicit febres, vel continuas, vel ardentes, vel tertianas, vomitus, dejectiones alvi, dolores auricularum, uleera oris, caneros, et quidem in ceteris partibus, sed maxime obsecenis; et quidquid resolvit hominem sudore.

Vix quidquam ex his non incident in autumnum: sed quoque eo tempore incertæ febres oriuntur, dolor lienis, aqua inter entem, tabes, quam Graeci nominant φθίσιν (phthisis); difficultas urinæ, quam appellant στραγγούριον (stranguria); morbus tenuioris intestini, quem nominant εἰλεόν (ileum); lævitas intestinorum, quæ vocatur λειεντερία (lienteria); dolores coxæ, comitiales morbi. Que idem tempus et fatigatos diutinis malis, et pressos ab proxima æstate tantum interimit; et eonficit alias novis morbis;

TRANSLATION.

weak, a corpulent dull. Whatever complaints are renewed by the motion of the humours, are generally to be dreaded most in spring. Therefore at that time sore eyes, pustules, haemorrhages, absesses of the body, which the Greeks name apostemata, atrabilis, whieh they call melancholia, insanity, epilepsy, angina, eatarheuma, and colds usually occur. Also those diseases of the joints and nerves, sometimes acute, sometimes chronic; the first are generally begun at this season, and the last are brought into action. But the summer is not altogether free from the most of these diseases mentioned above, but brings an additional train of either ardent or tertian fevers, vomiting, diarrhoea, pains in the ears, ulcers in the mouth, cancers in various parts of the body, but mostly on the privates; and other colliquative complaints which exhaust the frame.

There are scarcely any of these that do not happen in autumn; but there arise also at that time, erratic fevers, pains of the spleen, anasarca, consumption, whieh the Greeks name phthisis, difficulty of urine, whieh they term stranguria; a disease of the smaller intestine, which they designate the ileum; dysentery, whieh they call lienteria; pains of the hips, and epileptic diseases. This season is also fatal to those worn out by protracted maladies, and those so much debilitated by the pre-

conficit; et quosdam longissimis implicat, maximeque quartanis, quae per hiemem quoque exercant. Neque aliud magis tempus pestilentiae patet, cuiuscumque a generis est; quamvis variis rationibus nocet. Hiems autem capitis dolores, tussim, et quidquid in faucibus, in lateribus, in viseeribus mali contrahitur, irritat.

Ex tempestibus, Aquilo tussim movet, fauces exasperat, ventrem adstringit, urinam supprimit, horrores excitat, item dolores lateris et pectoris: sanguum tamen corpus spissat, et mobilius atque expeditius reddit. Auster aures liebetat, sensus tardat, capitis dolorem movet, alvum solvit, totum corpus efficit hebes, humidum, languidum. Ceteri venti, quo huic vel illi propiores sunt, eo magis vieinos his illis affectus faciunt. Denique omnis calor et jecur et lienem inflammat, mentem hebetat, ut anima deficiat, ut sanguis prorumpat, efficit. Frigus modo nervorum distentionem, modo rigorem infert; illud *σπασμός*, hoc *τέτανος* Græce nominatur: nigritiem in ulceribus, horrores in febribus excitat. In siccitatibus, acutæ febres, lippitudines, tormina, urinæ difficultas, articulorum dolores oriuntur. Per imbreves, longæ febres, alvi

ORDO.

et implicat quosdam longissimis, que maxime quartanis, quae exercant quoque per hiemem. Neque aliud tempus patet magis pestilentiae enjuscumque generis ea est; quamvis nocet variis rationibus. Auteui hiems irritat dolores capitum, tussim, et quidquid mali contrahitur in tauribus, in visceribus.

Ex tempestibus, Aquilo movet tussim, exasperat fauces, adstringit ventrem, supprimit urinam, excitat horrores, item dolores lateris et pectoris: tamen spissat sanguum corpus, et reddit mobilius atque expeditius. Auster hebetat aures, tardat sensus, movet dolorem capitum, solvit alvum, efficit totum corpus hebes, humidum, languidum. Ceteri venti, quo sunt propriores huic vel illi, eo faciunt affectus magis vicinos his vel illis. Denique omnis calor inflammat et jecur et lienem, hebetat mentem, deficit, ut anima deficiat, ut sanguis prorumpat. Frigus modo infert distensionem nervorum, modo rigorem; illud nominatur *σπασμός* (spasms), Græce, hoc *τέτανος* (tetanus): excitat nigritatem in ulceribus, horrores in febribus. In siccitatibus, acutæ febres, lippitudines, tormina, difficultas urinæ, dolores articulorum oriuntur. Per imbreves, longæ febres, dejectiones

TRANSLATION.

ceding summer; it carries off some by new diseases, and involves others in maladies of long continuance, especially quartan fevers, which may maintain their baneful influence even through winter. Neither is there any season more obnoxious to pestilence, of whatever kind that may be, and however various in its mode of assault.

The winter excites pains of the head, cough, and whatever complaints are contracted in the fauces, in the sides, and viscera.

Of the various winds, the north eases a cough, exasperates the fauces, binds the bowels, suppresses the urine, excites shiverings, also pains of the side and chest: but it braces a sound body, and renders it more flexible and active. The south wind affects the hearing, impedes the senses, causes pain of the head, disorders the bowels, and renders the whole frame phlegmatic, moist, and languid. The other winds, in proportion as they may approximate either of these, produce effects the more similar to each of them. In short, all heat inflames both the liver and spleen, hebetates the mind, produces syncope, and hemorrhages. Cold sometimes causes convulsions, at other times tetanus, the first is called in Greek *spasmos*, the last *tetanos*: it generates sphaceli (1) in ulcers, and shiverings in fevers. In dry weather acute fevers, lippitudines, tormina, dysuria, and pains of the joints arise. During rainy weather, continued fevers, diarrhoeas, angina

dejectiones, angina, cancri, morbi comitiales, resolutio nervorum; παράλυσιν Græci nominant. Neque solum interest, quales dies sint, sed etiam quales ante præcesserint. Si hiems sicca Septentrionales ventos habuit, ver autem Austros et pluvias exhibit, fere subeunt lippitudines, tormina, febres, maximeque in mollioribus corporibus, ideoque præcipue in mulieribus. Si vero Austri pluviaeque hiemem occuparunt, ver autem frigidum et siccum est, gravidæ quidem foeminæ, quibus tum adest partus, abortu periclitantur; eæ vero quæ gignunt, imbecillos, vixque vitales edunt: ceteros lippitudo arida, et si seniores sunt, gravedines atque distillationes male habent. At si a prima hieme Austri ad ultimum ver continuarunt, laterum dolores, et insania febricitantium, quam φρένησιν appellant, quam celerrime rapiunt. Ubi vero calor a primo vere orsus æstatem quoque similem exhibit, necesse est multum sudorem in febribus subsequi. At si sicca ætas Aquilones habuit, autumno vero imbres Austrique sunt, tota hieme, quæ proxima est, tussis, destillatio, raucitas, in quibusdam etiam tabes oritur. TRANSLATION.

scirrhus, epilepsies, relaxation of the nerves, which the Greeks name paralysis. Neither is the present weather alone to be considered, but also what kind has preceded for some time. If a dry winter has been attended by northerly winds, and the spring with southerly winds and rain, then follow blear eyes, dysenteries, and fevers, particularly in delicate persons, and on that account females are more susceptible. But if southerly winds and rains have prevailed in the winter, and the spring be cold and dry, then indeed, pregnant women whose time is near, are in danger of abortion; and those who complete the time of gestation, bring forth such delicate infants as are not likely to live: others again are seized with arid ophthalmia, and if they be old, with malignant catarrhs. But if the south winds have continued from the beginning of winter to the end of spring, then pains in the side, and febrile diseases accompanied with delirium, called phrenitis (2), carry off with great rapidity. But when the heat begins with the spring, and continues through the summer, great perspiration in fever necessarily follows. But if a north wind have prevailed through a dry summer, and the autumn with rains, and southerly winds, all the following winter we shall find coughs, catarrhs, hoarseness, and in some even consumption. But if the autumn too, lie equally dry, and the same northerly

iisdem Aquilonibus perflat, omnibus quidem mollioribus corporibus, interquæ muliebria esse proposui, secunda valesudo contingit: durioribus vero instare possunt, et aridae lippitudines, et febres partim acutæ, partim longæ; et ii morbi, qui ex atra bile nascuntur. Quod ad ætates vero pertinet, pueri proximi que his vere optime valent, et æstate prima tutissimi sunt: senes æstate et autumni prima parte: juvenes hieme, quique inter juventam senectutemque sunt. Inimicior senibus hiems, ætas adolescentibus est.

Tum si qua imbecillitas oritur, proximum est ut infantes, tenerosque adhuc pueros serpentia ulcera oris, quæ ἄφθας Graeci nominant, vomitus, nocturnæ vigilæ, aurum humor, circa umbilicum inflammations exerceant. Propriæ etiam dentientium, gingivarum, exuleerationes, distentiones nervorum, febriculae, alvi dejectiones; maximeque caninis dentibus orientibus male habent. Quæ perieula plenissimi eu jusque sunt, et eui maxime venter adstrictus est. At ubi ætas paulum processit, glandulæ, et vertebrarum, quæ in spina sunt, aliquæ inclinationes, strumæ, verrucarum quedam genera dolentia, ἀκροχορδόνας Graeci appellant, et plura alia tuberculæ oriuntur. TRANSLATION.

winds blow, all the more delicate subjects, amongst whom I have placed females, enjoy a good state of health: but for the more hardy, they may be troubled with arid ophthalmia, acute or chronic fevers, and atrabilious complaints.

As to the different ages, children and those a little more advanced, are most healthy in spring and in the beginning of summer; elderly persons in summer, and the first part of autumn; young and middle aged in winter. The winter is more inimical to old age, the summer to youth.

Then, if there should be any debility, infants and those of a tender age are liable to have spreading ulcers of the mouth, which the Greeks call aphthæ; vomiting, nightly vigilæ, running of the ears, and inflammations about the umbilicus. The diseases peculiar to dentition, are ulcerations of the gums, convulsions, slight fevers, purgings; particularly while the canine teeth are coming through; and which are more dangerous to those of a very full habit and costive bowels.

But when they have advanced a little in age, glandular tumours, spinal curvatures, struma, some painful kinds of warts, which the Greeks call acrochordonæ, and many other little swellings arise. But about the age of puberty, many of these

piente vero jam pube, ex iisdem multa, et longæ febres, et sanguinis ex naribus cursus. Maximeque omnis pueritia, primum eirea quadragesimum diem, deinde septimo mense, tum septimo anno, postea circa pubertatem perielittatur. Si qua etiam genera morborum in infautem inciderunt, ac neque pubertate, neque primis coitibus, neque in foemina primis menstruis finita sunt, fere longa sunt: saepius tamen morbi pueriles, qui diutius manscrunt, terminantur.

Adolescentia morbis acutis; item eomitalibus, tabique maxime objcta est: fereque juvenes sunt, qui sanguinem exspuunt. Post hanc ætatem laterum et pulmonis dolores, lethargus, cholera, insania, sanguinis per quædam velut ora venarum, *αιμορρόΐδας*; Græci appellant, profusio. In senectute, spiritus et urinæ difficultas, gravedo, articulorum et renum dolores, nervorum resolutiones, malus corporis habitus, *κακεξία*; Græci appellant, nocturnæ vigilæ, vitia longiora aurium, oculorum, etiam narium, præcipueque soluta alvus, et, que sequuntur hanc, tormina, vel laevitas intestinorum, eeteraque ventris fusi mala. Præter hæc graciles,

Adolescentia est objecta maxime aentis morbis; item eomitalibus (morbis), que tabi: que qui exspuunt sanguinem, sunt fere juvenes. Post hanc ætatem (est objecta maxime) dolores laterum et pulmonis, lethargus, cholera, insania, profusio sanguinis per quædam velutora venarum, Græci appellant *αιμορρόΐδας* (haemorrhoidas). In senectute, (est objecta maxime) difficultas spiritus et urinæ, gravedo, dolores articulorum et renum, resolutiones nervorum, malus habitus corporis Græci appellant *κακεξία* (cachexia), nocturnæ vigilæ, longiora vitia aurium, oculorum, etiam narium, que præcipue soluta alvus, et quæ sequuntur hanc, tormina, vel laevitas intestinorum, que cetera mala fusi ventris. Præter hæc tabes, de-

TRANSLATION.

occur, with long fevers, and hemorrhage from the nose. All children are in most danger about the fortieth day, then the seventh month, then the seventh year, afterwards at the time of puberty. Therefore if any species of disease arise in infancy, and are neither terminated by puberty, nor by their first sexual intercourse, nor in women by their first menstruation, they generally continue long: yet very frequently diseases incident to youth, which have remained very long, have been removed at that period.

The period of youth is most exposed to acute diseases, epilepsy, and consumption; and they are for the most part young men who spit blood. After this age, they will be subject to plenritic, pulmonic, and lethargic diseases, also cholera, madness, discharges of blood from certain orifices of veins, which the Greeks term Hæmorrhoidas. In old age dyspnœa, dysuria, gravedo, arthritic and nephralgic pains, paralysis, bad habit of body, called by the Greeks eæhexia, nightly watchings, chronic diseases of the ears, eyes, nose, and especially alvine disorders with their usual concomitants, tormina, lienteria, and the whole sequela incident to that malady.

Besides these, the slender built frame is worn down by consumption, diarrhoea, catarrhs, and also by visceral and pleuritic diseases. The corpulent are generally

THE PROGNOSTICS OF DISEASE.

BUT before an illness, (as I have said above,) certain preursors make their appearance; all of which have this in common, that some unusual aberrations, either organic or functional, have taken place in the body: not only for the worse, but sometimes for the better. Therefore, if a person have become more full, better-looking, and of a more florid complexion, he ought to look upon his improved appearance with distrust: for these things can neither remain stationary in the same habit, nor progress further, but are too often hurled back upon themselves with a retrograde revulsion of nature, carrying devastation and ruin in their train.

Yet, it is a worse sign when a person has become emaciated, contrary to his natural habit, and has lost his colour and comeliness; because, in those things which

est quod morbus demat; in iis quae desunt, non est quod ipsum morbum ferat. Præter hæc protinus timeri debet, si graviora membra sunt; si crebra ulcera oriuntur; si corpus supra consuetudinem incaluit; si gravior somnus pressit; si tumultuosa somnia fuerunt; si saepius expergiscitur aliquis, quam assuevit, deinde iterum soporatur; si corpus dormientis circa partes alias contra consuetudinem insudat, maximeque si circa pectus, aut cervices, aut crura, vel genua, vel coxas. Item, si marcat animus; si loqui et moveri piget; si corpus torpet; si dolor præcordiorum est, aut totius pectoris, aut, qui in plurimis evenit, capitis; si saliva plenum est os; si oculi cum dolore vertuntur; si tempora adstricta sunt; si membra inhorrescent; si spiritus gravior est; si circa frontem intentæ venæ moventur; si frequentes oscitationes; si genua quasi fatigata sunt, totumve corpus lassitudinem sentit. Ex quibus saepe plura, numquam non aliqua febrem antecedunt. In primis tamen illud considerandum est, num cui saepius horum aliquid eveniat, neque ideo corporis ulla difficultas subsequatur. Sunt enim quædam proprietates hominum, sine

Item, si marcat animus; si piget loqui et moveri; si corpus torpet; si est dolor præcordiorum, aut totius pectoris, aut capitis, qui evenit in plurimis; si os est plenum salivæ; si oculi vertuntur cum dolore; si tempora sunt adstricta; si membra inhorrescent; si spiritus est gravior; si intentæ venæ circa frontem moventur; si (sunt) frequentes oscitationes; si genua sunt quasi fatigata, vel totum corpus sentit lassitudinem. Plura ex quibus saepe, aliqua nunquam non antecedunt febrem. Tamen illud est considerandum in primis, num aliquid horum saepius eveniat enim, neque ideo ulla difficultas corporis subsequatur. Enim sunt quædam proprietates hominum, sine

TRANSLATION.

are superabundant, there is that on which a disease may exhaust its virulence; but in those which are deficient, there is not enough to resist the disease itself.

Besides these things, it ought to excite immediate fear if the limbs are very heavy; if frequent ulcers break out; if the body has become unusually warm; if much oppressed by sleep; if the dreams have been tumultuous; if a person awakes oftener than usual, and afterwards goes to sleep again; if a sleeping person perspires in some parts contrary to custom, especially about the chest, neck, legs, knees, or hips. Also, if the mind is dejected; if there be a reluctance of speech and motion; if the body be torpid; if there be pain about the præcordia, or of the whole chest, or which happens in most, the head; if the mouth be filled with saliva; if the eyes be turned with pain; if the temples feel as if they were bound; if the limbs shiver; if the breathing be oppressed; if the temporal arteries are dilated and beat forcibly; if there be frequent yawnings; if the knees feel wearied, or the whole body be in a state of lassitude.

Fever is often preceded by many of these harbingers, but never without some of them. We must consider, in the first place, whether any of these signs may happen to a person without any subsequent inconvenience arising from them. For there are some peculiarities of habit in men, without a knowledge of which it

quarum notitia non facile quidquam in futurum præsagiri potest. Facile itaque securus est in iis aliquis, quæ saepe sine periculo evasit: ille solicitari debet, cui hæc nova sunt; aut qui ista numquam sine custodia sui tuta habuit.

WHAT MAY BE CONSIDERED GOOD SYMPTOMS IN SICK PEOPLE.

BUT when a person is seized with fever, we may know that he is not in danger if he lies upon either the right or left side, as may seem best to himself, with his legs drawn up a little, which is generally the posture of a healthy person in bed: if he turns himself with ease; if he sleeps in the night time, and wakes in the day; if he breathes easily; if he does not struggle; if the skin be full(3) about the umbilicus and pubes; if the præcordia be equally soft on both sides without any sense of pain; or if they are a little swollen, yet yield to the impression of the fingers, and are not

valetudo, ut spatium aliquod habebit, sie tuta erit. Corpus quoque, quod æqualiter molle et calidum est, quodque æqualiter totum insudat, et cuius febricula eo sudore finitur, securitatem pollieetur. Sternutamentum etiam inter bona indicia est, et cupiditas cibi vel a primo servata, vel etiam post fastidium orta. Neque terrere debet ea febris, quæ eodem die finita est; ac ne ea quidem, quæ quamvis longiore tempore evanuit, tamen ante alteram accessionem ex toto quievit, sic ut corpus integrum, quod εἰλικρίνες Græci voeant, fieret. Si quis autem ineidit vomitus, mistus esse et bile et pituita debet: et in urina subsidere album, lœve, æquale; sie ut etiam, si quæ quasi nebeculæ innatarint, in imum deferantur. At venter ei, qui a periculo tutus est, reddit mollia, figurata, atque eodem fere tempore, quo secunda valetudine assuevit, modo convenientia iis, quæ assumuntur. Pejor cita alvus est; sed ne hæc quidem terrere protinus debet, si matutinis temporibus coacta magis est, aut si procedente tempore paulatim contrahitur, et rufa est, neque fœditate odoris similem alvum sani hominis excedit. Ac

ORDO.

bebit, ut valetudo erit tuta aliquod spatium. Quoqne corpus, quod est æqualiter molle et calidum, que quod insundat totum æqualiter, et febricula cuius finitur eo sudore, pollicetur securitatem. Sternutamentum est etiam inter bona indicia, et cupiditas cibi vel servata a primo, vel etiam orta post fastidium. Neque debet ea febris terrere, quæ est finita eodem die; ac ne quidem ea, quæ quamvis evanuit longiore tempore, tamen quievit ex toto ante alteram accessionem, sic ut corpus fieret integrum, quod Graeci vocant εἰλικρίνες (eilikrines). Antem si quis vomitus ineidit, debet esse mixtus et hile et pituita: et album subsidere in urina, lœve, æquale; sic ut etiam si quæ quasi imbeculæ innatarint, deferantur in imum. At ei, qui est tunc a periculo, venter reddit mollia, figurata, atque fere eodem tempore, quo assuevit secunda valetudine, modo convenientia iis, quæ assumuntur. Cita alvus est pejor; sed ne quidem hæc debet terrere protinus, si est magis coacta matutinis temporibus, aut si contrahitur paulatim procedente tempore, et est rufa, neque excedit similem alvum sani hominis fœditate odoris. Ac

TRANSLATION.

in pain; as this malady will have some duration, yet not dangerous. A body which is equally soft and warm, and perspires all over, and the slight fever is carried off by that sweat, promises returning health. Also sneezing is a favourable symptom, either retained from the beginning, or having arisen after nausea.

Nor ought that fever to terrify which terminates in one day; nor even that which, although it has disappeared in a longer time, yet entirely remitted before another accession, so that the body in the mean time might become sound; which the Greeks call eilikrines.

Bnt if any vomiting happens, it ought to be mixed with bile and phlegm; and a white, smooth, equal sediment, ought to subside in the urine; so that, if there should be any supernatant floeculi, it may deposit at the bottom. And his bowels, who is out of danger, voids soft, figured motions (4); and evacuated, for the most part, about the same time in which he has been accustomed to in health, and in quantity proportioned to the nourishment taken.

A frequency of stools is worse; but even this ought not to be considered immediately dangerous if it be of a better consistence in the morning, or, as time advances, becomes harder by degrees, and is inclined to be reddish, nor exceed in factor a like motion of a healthy man. And there is nothing injurious in passing

lumbricos quoque aliquos sub fine morbi descendisse, nihil nocet. Si inflatio in superioribus partibus dolorem tumoremque fecit, bonum signum est sonus ventris inde ad inferiores partes evolutus; magisque etiam, si sine difficultate, cum stercore exessit.

ORDO.

aliquos lumbricos quoque descendisse sub fine morbi, nocet nihil. Si inflatio fecit dolorem que tumorem in superioribus partibus, sonus evolutus ad inferiores partes ventris est bonum signum; que etiam magis, si exessit sine difficultate, enim stercore.

UNFAVOURABLE SYMPTOMS OF THE SICK.

ON the other hand, there is a danger of severe illness when the sick person lies supine, with his arms and legs extended; when he wishes to sit erect in the acme itself of an acute disease, and especially in peripneumonia; when he is distressed with nightly watching, even although he sleep in the day time; of which that sleep is worst betwixt the fourth hour(5) and night, than that which is from the morning to the same hour. Yet it is the worst of all, if he neither sleep by night nor by day; for that can scarcely be, without continual delirium. But it is also an equally bad sign to be oppressed by sleep beyond the due time; and the worse, in proportion as the sleep during the day extends itself to that of night. It is also a sign of

Mali etiam morbi testimonium est, vehementer et cerebro spirare; a sexto die cœpisse inhorrescere; pus exspuere; vix exscreare; dolorem habere continuum; difficulter ferre morbum; jaetare brachia et crura; sine voluntate lacrimare; habere humorem glutinosum dentibus inhærentem; cutem circa umbilicum et pubem maeram; præcordia inflammata, dolentia, dura, tumida, intenta, magisque, si haec dextra parte quam sinistra sunt; periculosisimum tamen est, si venæ quoque ibi vehementer agitantur.

Mali etiam morbi signum est, nimis celeriter emacescere; caput et pedes manusque frigidas habere, ventre et lateribus calentibus; aut frigidas extremas partes acuto morbo urgente; aut post sudorem inhorrescere; aut post vomitum singultum esse, vel rubere oculos; aut post cupiditatem eibi, postve longas febres hunc fastidire; aut multum sudare, maximeque frigido sudore; aut habere sudores non per totum corpus æquales, quicunque febrem non finiant; et eas febres, quæ quotidie tempore eodem revertantur; quæve semper pares accessiones habent, neque tertio quoque die leventur; quæve sic continent, ut per accessiones

ORDO.

noctu. Etiam spirare vehementer et cerebro, est testimonium mali morbi; cœpisse inhorrescere a sexto die; exspuere pus; exscreare vix; habere continuum dolorem; ferre morbum difficulter; jaetare brachia et crura; lacrimare sine voluntate; habere glutinosum humorem inhærentem dentibus; cutem macram circa umbilicum et pubem; præcordia inflammata, dolentia, dura, tumida, intenta, que magis si haec sunt dextra parte quam sinistra; tamen est periculosisimum, si quoque venæ agitatur vehementer ibi.

Etiam emacescere nimis celeriter, est signum mali morbi; habere caput et pedes que manus frigidas, ventre et lateribus calentibus; aut acuto morbo urgente, extremas partes (esse) frigidas; aut inhorrescere post sudorem; aut esse singultum post vomitum, vel oculos rubores; aut hunc fastidire post cupiditatem cibi, vel post longas febres; aut sudare multum, que maxime frigido sudore; aut habere sudores non æquales per totum corpus, que qui non finiant febrem; et eas febres, quæ quotidie revertantur eodem tempore; vel quæ semper habeant pares accessiones; neque quoque leventur tertio die; vel quæ sic continent, ut inerescant per accessiones, tan-

TRANSLATION.

a bad disease to breathe rapidly and with vehemence; for shiverings to come on after the sixth day; to expectorate pus, and that with difficulty; to have constant pain; to be much distressed with the disease; to toss the arms and legs about; to weep involuntarily; to have a glutinous sordes adherent to the teeth; for the skin about the umbilicus and pubes to be emaciated; the præcordia inflamed, painful, hard, swollen, tense; and more so, if these symptoms be more on the right side than on the left; but the danger is still more increased, if the pulsation of the arteries there be violent.

Again, it is the indication of a bad disease to become suddenly emaciated; to have the head, hands, and feet cold, the abdomen and sides being hot; or to have the extremities cold, under the influence of an acute disease; or to shiver after a sweat; or to have the hiccough after a vomit; or the eyes to be red; or after having a desire for food, or after long fevers, to loath this; to perspire much, and especially cold sweats; or to have perspiration partially diffused over the body, which does not dissipate the fever; and those fevers which return daily at the same time; or those that have paroxysms equally violent, and which do not remit every third day; or those that continue, so as to increase in their paroxysms, and only remit in their

increasent, per decessiones tantum moliantur, nec umquam integrum corpus dimittant. Pessimum est, si ne levatur quidem febris, sed æque concitata continuaat. Periculorum est etiam, post arquatum morbum febrem oriri; utique si præcordia dextra parte dura manserunt. Ac dolentibus iis, nulla acuta febris leviter terrere nos debet; neque umquam in acuta febre, aut a somno non est terribilis nervorum distentio.

Timcre etiam ex somno, mali morbi est; itemque in prima febre protinus mentem esse turbatam, membrum aliquod esse resolutum. Ex quo casu quamvis vita redditur, tamen id fere membrum debilitatur. Vomitus etiam periculosus est sinceræ pituitæ, vel bilis; pejorque, si viridis, aut niger est. At mala urina est, in qua subsidunt subruba et laevia: deterior, in qua quasi folia quædam tenuia atque alba: pessima ex his, si tamquam ex furfuribus factas nubeculas repræsentat. Diluta quoque, atque alba, vitiosa est, sed in phreneticis maxime. Alvus autem mala est, ex toto suppressa. Periculosa etiam, quæ inter febres fluens conquiescere hominem in cubili non patitur; utique, si quod descendit, est perliquidum, aut albidum, aut pallidum, aut spumans.

ORDO.

tum moliantur per decessiones, nec umquam dimittant integrum corpus. Est pessimum, si quidem febris ne levatur, sed continuaat æque concitata. Ac iis dolentibus, nulla acuta febris debet terrere nos leviter; aut neque umquam in acuta febre, non est distentio nervorum a somno terribilis.

Etiam timere ex somno, est (signum) mali; que item mentem esse turbatam, vel membrum esse aliquod resolutum protinus in prima febre. Ex quo casu quamvis vita redditur, tamen id membrum fere debilitatur. Etiam vomitus sinceræ pituitæ, vel bilis est periculosus; que pejorque, si est viridis, aut niger. At urina est mala, in qua subruba et laevia subsidunt: deterior, in qua quasi quedam tenuia atque alba folia: ex his (est) pessima, si tamquam repræsentat nubeculas factas ex furfuribus. Quoque diluta, atque alba, est vitiosa, sed maxime in phreneticis. Autem alvus suppressa ex toto, est mala. (Est) etiam perieculosa, quæ fluens inter febres, non patitur hominem conquiescere in cubili; utique, si quod descendit, est perliquidum, aut albidum, aut pallidum, aut spumans. Præter

TRANSLATION.

intervals, but never leave the body free from the disease. It is the worst sign of all, if the fever be not alleviated, but continue equally violent. It is dangerous also for fever to come on after jaundicee(6), particularly if the præcordia have remained hard on the right side. Also, if attended with pain there, every acute fever ought to terrify us a little; and always in such a fever, or after sleep, convulsions are terrible.

Also, to start with fear out of sleep is a bad omen; and also for the mind to be disturbed in the beginning of a fever, or a limb to become paralysed. In which ease, although the life be saved, yet too often that limb remains debilitated. Also vomiting of pure phlegm, or bile, is dangerous; and it is worse, if it be green or black. That urine is bad, in which a reddish, smooth sediment subsides; and that is worse, in which there are, as it were, little white leaves; but the worst of all, which represents little elounds as if composed of bran. Thin and white urine is also diseased, but mostly in phrenetic patients. It is bad to have the bowels entirely constipated. So is that continual purging during fevers, which does not permit the patient to remain in bed; especially if the alvine excretions be very liquid, or whitish, or pale, or frothy.

Præter hæc periculum ostendit id, quod excrenitur, si est exiguum, glutinosum, laeve, album, idemque subpallidum: vel si est aut lividum, aut biliosum, aut eruentum, aut pejoris odoris, quam ex consuetudine. Malum est etiam, quod post longas febres sincerum est.

ORDO.

hæc id quod excrenitur, ostendit periculum, si est exiguum, glutinosum, laeve, album, que idem subpallidum: vel si est aut lividum, aut biliosum, aut eruentum, aut pejoris odoris, quam ex consuetudine. Est etiam malum, quod est sincerum post longas febres.

TRANSLATION.

Besides these, that which is excreted denotes danger, if it be small in quantity, glutinous, smooth, white, and the same rather pale; or if they be either livid, or bilious, or bloody, or of a more fœtid odour than common. That discharge is also bad, which is unmixed with faecal matter after long fevers.

CAP. V.

DE SIGNIS LONGÆ VALETUDINIS.

Post hæc indicia, votum est longum morbum fieri: sic enim necesse est, nisi ocecidit. Neque vitæ alia spes in magnis malis est, quam ut impetum morbi trahendo aliquis effugiat, porrigaturque in id tempus, quod curationi locum præstet.

Protinus tamen signa quædam sunt, ex quibus colligere possumus, morbum, etsi non interemerit, longius tamen tempus habiturum: ubi frigidus sudor inter febres non acutas circa caput tantum, et eervices oritur; aut ubi, febre non quiescente, corpus insudat; aut ubi corpus modo frigidum, modo

CHAP. V.

THE SYMPTOMS OF A PROTRACTED ILLNESS.

AFTER these indications, it is desirable(7) that the disease may be of some duration, for it is necessary, unless the patient die. Nor is there any other hope of life in formidable diseases, than to aid the escape of the sufferer by eluding the violence of the disease, and thus extending the time sufficiently, in order to afford an opportunity of treatment.

Yet there are some immediate signs by which we are able to prognosticate that a disease, although not mortal, will have a very long time. For instance, when a cold sweat arises in chronic fevers about the head and neck only; or when the body perspires without a remission of the fever; or when the body is now cold,

ealidum est, et eolor alius ex alio fit; aut ubi, quod inter febres aliqua parte absecessit, ad sanitatem non pervenit; aut ubi aeger pro spatio parum emereseit: item, si urina modo liquida et pura est, modo habet quædam subsidentia; si laevia atque alba rubrave sunt, quæ in ea subsidunt; aut si quasdam quasi mieulas repræsentat; aut si bullulas excitat.

ORDO.

frigidum, modo calidum, et aliis color fit ex alio; aut ubi, quod abscessit aliqua parte inter febres, non pervenit ad sanitatem; aut ubi aeger emacrescit parum pro spatio: item, si urua est modo liquida et pura, modo habet quædam subsidentia; si sunt laevia atque alba vel rubra, quæ subsidunt in ea; aut si repræsentat quasdam quasi miculas; aut si excitat bullulas.

TRANSLATION.

again hot; and the complexion now, is made to give place to another again; or when some unhealthy abscess has suppurated in fevers; or when the patient is but little emaciated in proportion to the time; also, if the urine be at one time liquid and clear, at another time to have deposits in it: if the precipitate be smooth and white, or red; or if it present a floeculent appearance; or if it excite air bubbles.

CHAP. VI.

THE HARBINGERS OF DEATH.

Now danger being announced, indeed, by the preceding signs, yet still there is hope. But the following precursors proclaim aloud, that the *ultimatum* is now at hand; when the nostrils are acute, the temples collapsed, the eyes hollow, the ears cold and languid, and slightly inverted at their extremities, the skin about the forehead hard and tense, the complexion dark or ghastly pale, and much more so, if these symptoms have occurred independent of any preceding vigilance, diarrhoea, or want; from which causes, this appearance sometimes arises, but

uno die finitur: itaque diutius durans,
mortis index est.

Si vero in morbo vetere jam triduo talis est, in propinquu mors est; magisque, si praeter haec oculi quoque lumen refugiant, et illacrimant; quæque in iis alba esse debent, rubescunt; atque in iisdem venulae pallent; pituitaque in iis innatans, novissime angulis inhærescit; alterque ex his minor est; iisque aut vehemente subsederunt, aut facti tumidiores sunt; perque somnum palpebrae non committuntur, sed inter has ex albo oculorum aliiquid appareret, neque id fluens alvus expressit; eademque palpebrae pallent, et idem pallor labra et nares decolorat; eademque labra, et nares, oculique, et palpebrae, et supercilia, aliquave ex his pervertuntur; isque propter imbecillitatem jam non audit, aut non videt.

Eadem mors denunciatur, ubi æger supinus cubat, eique genua contracta sunt; ubi deorsum ad pedes subinde delabitur; ubi brachia et crura nudat, et inæqualiter dispergit, neque iis calor subest; ubi hiat; ubi assidue dormit; ubi is, qui mentis suæ non est, neque id facere sanus solet, dentibus stridet; ubi ulcer, quod aut ante, aut in ipso morbo

die: itaque durans dintins, est index mortis.

Vero si est talis in morbo jam triduo vetere, mors est in propinquu, que magis, si praeter haec oculi quoque refugiant lunen, et illaerinnant; que quæ debent esse alba in iis, rubescunt; atque venulae in iisdem pallent; que pituita innatans in iis, novissime inhærescit angulis; que alter ex his est minor; que ii aut subscederunt vehemente, aut sunt facti tumidiores; que palpebrae non committuntur per somnum, sed inter has aliquid ex albo oculorum apparet, neque fluens alvus expressit id; que eadem palpebrae pallent, et idem pallor decolorat labra et nares; que eadem labra, et nares, que oculi, et palpebrae, et supercilia, vel aliqua ex his pervertuntur; quæcumque jam propter imbecillitatem non audit, aut non videt.

Mors denunciatur eadem, ubi æger eubat supinus, que genua sunt contracta ei; ubi delabitur deorsum ad pedes subinde; ubi nudat brachia et crura, et dispergit inæqualiter, neque calor subest iis; ubi hiat; ubi dormit assidue; ubi is, qui non est sua mentis, stridet dentibus, neque solet facere id sanus; ubi ulcus, quod est natum aut ante, aut in morbo ipso, ari-

TRANSLATION.

then it vanishes in a day: therefore, lasting longer, they indicate approaching dissolution.

So, if they continue in this state for three days in a chronic disease, death is at hand; particularly if, besides these, the eyes shun the light and weep, and that which ought to be white in them becomes red; their small veins are pallid, and the lubricating moisture, floating on the surfaces, at last adheres to the angles; one is less than the other, and they have either very much sunk or much swollen; when the palpebrae are not closed in sleep, but discover some part of the white between them; neither have these been produced by diarrhoea; and the same eyelids be pale, and that pallor blanch the lips and nostrils; and these lips, nostrils, eyes, eye-lids, and supercilia, or some one of them, be distorted, his imbecility now forbids the eye to see or the ear to hear.

Death has marked him out for his victim when the sufferer lies supine, with his knees contracted; when he slips down frequently towards his feet; when he lays bare his arms and legs and tosses them about carelessly, and there is no warmth in them; when he yawns; when he sleeps constantly; when he gnashes his teeth in a state of insensibility, to which he was unaccustomed in health; when an ulcer has

natum est, aridum, et aut pallidum, aut lividum factum est.

Illa quoque mortis indicia sunt, ungues, digitique pallidi; frigidus spiritus; aut si manibus quis in febre, et acuto morbo, vel insania, pulmonisve dolore, vel capitis, in veste floeos legit, fimbriasve didueit, vel in adjuneto pariete, si qua minuta eminent, earpit. Dolores etiam eirea coxas et inferiores partes orti, si ad viseera transierunt, subitoque desierunt, mortem subesse testantur; magisque, si alia quoque signa accesserunt.

Neque is servari potest, qui sine ullo tumore febrietans, subito strangulatur, aut devorare salivam suam non potest; euive in eodem febris corporisque habitu cervix convertitur, sic ut devorare æque nihil possit; aut eui simul et continua febris et ultima corporis infirmitas est; aut eui, febre non quiescente, exterior pars friget, interior sic ealet, ut etiam sitim faciat; aut qui, febre æque non quiescente, simul et delirio et spirandi difficultate vexatur; aut qui, epoto veratro, exceptus distentione nervorum est; aut qui ebrius obmutuit. Is enim fere nervorum distentione consumitur, nisi aut febris accessit, aut eo tempore,

ORDO.

dum, et est faetum aut pallidum, aut lividum.

Quoquæ illa sunt indicia mortis, ungues, que digitæ pallidi; frigidus spiritus; aut si quis in febre, et acuto morbo, vel insania, vel dolore pulmonis, vel capitis, legit floeos in veste manib; vel diducit fimbrias, vel si qua minuta eminent in adjuncta pariete, earpit. Etiam dolores orti circa coxas et inferiores partes, si transierunt ad viscera, que desierunt subito, testantur mortem subesse; que magis, si quoque alia accesserunt.

Neque potest is servari, qui febrietans, subito strangulatur sine ullo tumore, aut non potest devorare suam salivam; vel cui cervix convertitur in eodem habitu febris que corporis, sic ut possit devorare nihil æque; aut eni est et continua febris et ultima infirmitas corporis; aut cui, febre non quiescente, exterior pars friget, (et) sic interior calent, ut etiam faciat sitim; aut qui, febre non quiescente æque, vexatur simul et delirio et difficultate spirandi; aut qui est exceptus distentione nervorum, epoto veratro; aut qui obmutuit ebrius. Enim is fere consumitur distentione nervorum, nisi aut febris accessit, aut cœpit loqui

TRANSLATION.

arisen, either before or during the progress of the disease itself, has become dry, or pale, or livid.

The following are also symptoms of death: pallid nails and fingers; cold breath; or if one in a fever, or acute disease, or in insanity, or in peripneumonia, or in phrenitis, begin picking the bed-clothes, or separate the fringes, or catch at any minute object that may be on the adjoining wall. Also, pains having arisen about the hips and lower parts, if they have passed over to the viscera and ceased suddenly, prove death to be at hand; especially if the other symptoms precede.

Nor can he be saved, who is labouring under fever without any tumour, and is suddenly seized with a sense of strangulation, or is unable to swallow his own saliva; nor he who is in the same state of fever and of body, the neck being so distorted that it is equally impossible for him to swallow any thing; nor he who has at the same time a continued fever, with extreme debility of body; or he who, without any alleviation of the fever, has the surface of his body cold, and the interior so hot as to produce thirst; or he on whom the fever has been equally violent, is tortured at the same time with delirium and dyspnœa; or one who, after having drunk hellebore, has been seized with convulsions; or one who has lost the power of speech from intoxication: for he is generally carried off by convulsions,

quo ebrietas solvi debet, loqui cœpit. Mulier quoque gravida acuto morbo facile consumitur; et is, cui somnus dolorcm auget; et cui protinus, in recenti mórbo, bilis atra vel infra vel supra se ostendit; cuive alterutro modo se prompsit, cum jam longo morbo corpus ejus esset extenuatum et affectum. Sputum etiam biliosum, et purulentum, sive separatim ista, sive mista proveniunt, interitus periculum ostendunt. Ac si circa septimum diem tale esse cœpit, proximum est, ut is circa quartumdecimum diem decedat, nisi alia signa meliora pejorave accesserint: quæ, quo leviora graviorave subsecuta sunt, eo vel seriorem mortem, vel maturom denuntiant.

Sudor quoque frigidus in acuta febre pestifer est: atque in omni morbo vomitus, qui varius, et multorum colorum est; præcipue, si malus in hoc odor est. Ac sanguinem quoque in febre vomisse, pestiferum est. Urina vero rubra et tenuis in magna cruditate essc consuevit; et sæpe, antequam spatio maturescat, hominem rapit: itaque, si talis diutius permanet, periculum mor-

ORDO.

eo tempore, quo ebrietas debet solvi. Quoque gravida mulier consumitur facile acuto morbo; et is, eni somnus auget dolorem; et cui atra bilis ostendit se protinus, vel supra vel infra in recenti morbo; vel eni prompsit se alterutro modo, cum jam corpus esset extenuatum et affectum longo morbo. Etiam biliosum, et purulentum sputum, sive ista proveniunt separatim, sive mista, ostendunt periculum interitus. Ac si cœpit esse tale circa septimum diem, est proximum, ut is decedat circa quartumdecimum diem, nisi alia meliora vel pejora signa accesserint: quæ, quo leviora vel graviora sunt subsecuta, eo denuntiant vel seriorem vel maturom mortem.

TRANSLATION.

unless a fever supervene or he begin to speak about that time when the effects of incbriation usually cease.

A pregnant woman also is easily destroyed by an acute disease; and also that person whose pain is augmented by sleep; and he who, in the commencement of a recent disease, ejects black bile either upwards or downwards; or in whom the evauation has been in either mode, when the constitution has been previously emaciated and debilitated by a long disease. Also bilious and purulent spitting, whether these be ejected separately or mixed, prognosticate a dissolution. And if it began to be such about the seventh day, the probability is that he will die about the fourteenth, unless some other symptoms, either more auspicious or malignant, shall have acceded; and, according as those symptoms have followed, either milder or more virulent, so in proportion they denote either a more protracted or accelerated dissolution.

A cold perspiration also in an acute fever is a pestiferous omen; and in every disease a vomiting which is of a variegated mixture; and particularly if there be a fetid odour in this. To have vomited blood in fever is also a fatal symptom.

The urine is generally red, thin, and in great crudity, and often carries off the patient before concoction takes place; therefore, if it continue very long so, it por-

tis ostendit. Pessima tamen est, præcipueque mortifera, nigra, crassa, mali odoris. Atque in viris quidem et mulieribus talis deterrima est: in pueris vero, quæ tenuis et diluta est. Alvus quoque varia, pestifera est, quæ strigmentum, sanguinem, bilem, viride aliquid, modo diversis temporibus, modo simul, et in mistura quadam, disereta tamen repræsentat. Sed hæc quidem potest paulo diutius trahere: in præcipiti vero jam esse denuntiat, quæ liquida, eademque vel nigra, vel pallida, vel pinguis est; utique, si magna fœditas odoris accessit.

Illud interrogari me posse ab aliquo seio: si certa futuræ mortis indicia sunt, quomodo interdum deserti a medieis convaleseant, quosdamque fama prodiderit in ipsis funeribus revixisse? Quin etiam vir jure magni nominis Demoeritus, ne finitæ quidem vitæ satis certas notas esse, proposuit, quibus mediei ereditissimæ: adeo illud non reliquit, ut certa aliqua signa futuræ mortis essent. Adversus quos ne dieam illud quidem, quod in vicino saepe quædam notæ positaæ, non bonos, sed imperitos medieos deeipiunt; quod Aselepiades funeri ob-

ORDO.

tis. Tamen nigra, crassa, mali odoris est pessima que præcipue mortifera. Atque quidem talis est deterrima in viris et mulieribus: vero quæ in pueris et tenuis est diluta. Quoque varia alvus est pestifera, quæ repræsentat strigmentum, sanguinem, bilem, aliquid viride, modo diversis temporibus, modo simul, tamen discreta, et in quadam mistura. Sed quidem potest trahere hæc paulo diutius: vero denuntiat esse jam in præcipiti, quæ est liquida, que eadem vel nigra, vel pallida, vel pinguis; utique, si magna fœditas odoris accessit.

Seio me posse interrogari illud ab aliquo: si sunt certa indicia mortis, quomodo interdum deserti a medieis convalescant, que fama prodiderit quosdam revixisse in funeribus ipsis? Quinetiam Democritus, vir magni nominis jure, proposuit, notas vitæ finitæ, quibus mediei ereditissimæ ne quidem satis certas: adeo illud non reliquit, ut essent aliqua certa signa futuræ mortis. Adversus quos ne quidem dieam illud, quod quædam notæ positaæ saepe in vicino, non deeipiunt, bonos sed imperitos medieos; quod Asclepiades obvius intellexit eum vi-

TRANSLATION.

tends imminent danger. Yet, that which is black, thick, and of an offensive smell, is worst, and particularly deadly. And such is the worst in men and women; but in children, that which is thin and watery is the most dangerous. When the alvine discharges represent strigments (8), blood, bile, and green matter, whether passed at different times or at once in the same mixture, yet sufficiently distinct, are held as pestiferous messengers. But he may protract his existence under these symptoms a little longer: but when they are fluid, and likewise either black, pale, or slimy, and especially if accompanied with intolerable fetor, they denounce a precipitate dissolution.

I am aware that I may be interrogated on this subject by some person concerning the certainty of these mortal prognostics, and how it happens that patients, deserted by their physicians, sometimes recover; and, indeed, report has transmitted some to have resuscitated during the funeral ceremony. Even Democritus, a man justly entitled to a great name, has declared, that there are no marks sufficiently characteristic of *animation* being extinct on which physicians could depend: therefore he would not admit that there could be any certain prognoses of death. In answer to whom, I will not even claim this, that a similitude of certain symptoms do not often deceive the skillful, but the unskillful, physicians; (that Asclepiades

vius intellexit, eum vivere, qui efferebatur: nec protinus erimeu artis esse, si quod professoris sit. Illa tamen moderatius subjiciam: conjecturalem artem esse medicinam, rationemque conjecturæ talem esse, ut eum sæpius aliquando responderit, interdum tamen fallat. Non itaque, si quid vix in millesimo corpore aliquando decipit, fidem nou habet, cum per innumera-biles homines respondeat. Idque non in iis tantum, quæ pestifera sunt, dico; sed in iis quoque, quæ salutaria.

Siquidem etiam spes interdum frustratur, et moritur aliquis, de quo medicus securus primo fuit; quæque medendi causa reperta sunt, nonnumquam in pejus alicui convertunt. Neque id evitare humana imbecillitas in tanta varietate corporum potest. Sed est tamen medicinæ fides, quæ multo sæpius, perque multo plures ægros prodest. Neque tamen ignorare oportet, in acutis morbis fallaces magis notas esse et salutis, et mortis.

ORDO.

vere qui efferebatur funeri: nec esse protinus erimen artis, si sit quod professoris. Tamen subjiciam illa moderatius: medicinam esse conjecturalem artem que rationem conjecturæ esse talem ut cum responderit aliquando sæpius, tamen interdum fallat. Itaque, si quid nou decipit vix aliquando in millesimo corpore, non habet fidem, cum respondeat per innumerabiles homines. Que dieo, id, non tantum in iis quæ sunt pestifera, sed quoque in iis quæ (sunt) salutaria.

Siquidem etiam spes interdum frustratur, et aliquis moritur, de quo primo medicas fuit securus: que, que sunt reperta causa medendi, nonnumquam convertunt in alieni pejus. Neque potest humana imbecillitas evitare id in tanta varietate corporum. Sed tamen est fides medicinæ, quæ prodest multo sæpius, que multo plures ægros. Tamen, neque oportet ignorare, notas et salutis et mortis esse magis fallaces in acutis morbis.

TRANSLATION.

having met a funeral, knew that he was alive whom they were about to bury;) that this insufficieney ought not to be ascribed to the art, if there may be any, of the professor. But I will submit with more moderation ;—that medicine is a conjectural art, and the nature of conjecture is such, that although it has frequently succeeded hitherto, yet sometimes it may deceive. Therefore, if a symptom do not deceive us through a long series, scarcely once in a thousand, we are not to withhold our faith when it answers innumerable cases :—and I say, that this is not only referrible to the pestiferous symptoms, but also to the salutary.

For even hope itself is frustrated sometimes; and a patient dies, about whom the physician at first apprehended no danger: and those remedies which have been discovered for the alleviation of disease sometimes prove abortive, and to some even injurious. Neither is it possible for the consequent imperfection of human nature to avoid this in so great a variety of constitutions. Yet still there is faith to be placed in medicine, which proves beneficial to the sick very frequently, and by far the greater number. However, we ought not to be ignorant, that both the salutary and mortal symptoms are more fallacious in acute diseases.

CAP. VII.

DE NOTIS, QUAS ALIQUIS IN SINGULIS
MORBORUM GENERIBUS HABERE
POSSIT.

SED eum proposuerim signa, quæ in omni adversa valetudine communia esse eonsueverunt; eo quoque transibo, ut, quas aliquis in singulis morborum generibus habere possit notas, indieem. Quædam autem sunt, quæ ante febres, quædam quæ inter eas, quid aut intus sit, aut venturum sit, ostendunt. Ante febres, si caput grave est, aut ex somno oculi caligant, aut frequentia sternumenta sunt, circa caput aliquis pituitæ impetus timeri potest. Si sanguis, aut calor abundat, proximum est, ut aliqua parte profluvium sanguinis fiat.

Si sine causa quis emacietur, ne in malum habitum corpus ejus recidat, metus est. Si præcordia dolent, aut inflatio gravis est, aut toto die non concocta fertur urina, eruditatem esse manifestum est. Quibus diu color sine morbo regio malus est, hi vel capitidis doloribus con-

DE NOTIS, QUAS ALIQUIS POSSIT
HABERE IN SINGULIS GENERIBUS MORBORUM.

SED cum proposuerim signa, quæ consueverunt esse communia in omni adversa valetudine; transibo quoque ea, ut indicem quas notas aliquis possit habere in singulis generibus morborum. Autem sunt quædam, quæ ostendunt casus ante febres, quædam (ostend. eas) inter, aut quid sit intus, aut sit venturum. Si caput est grave ante febres, aut oculi caligant ex somno, aut sternumenta sunt frequentia, aliquis impetus pituitæ potest timeri circa caput. Si sanguis, aut calor abundant, proximum est, ut profluvium sanguinis fiat ex aliqua parte.

Si quis emacietur sine causa, est metus, ne corpus ejus recidat in malum habitum. Si præcordia dolent, aut est gravis inflatio, aut urina non fertur concocta toto die, est manifestum esse cruditatem. Quibus color est malus diu sine regio morbo, hi conflicantur vel dolores.

TRANSLATION.

CHAP. VII.

THE PARTICULAR SIGNS OF EACH DISEASE.

SINCE I have described those symptoms which generally accompany disease, I will now proceed to point out those diagnostic characters, which any patient may happen to have in each particular kind of illness. But there are some of these which manifest themselves before, others during the progress of the fevers, which evince either a morbid action from within, or what may be expected to come. If, before fevers the head be heavy, or the eyes dim after sleep, and frequent sneezings, a catarrhoeus from the head may be dreaded (9). If the blood be in excess, and very hot, a haemorrhage is likely to ensue from some part.

If any one become emaciated without an evident cause, there is reason to dread lest he become cachectic.

If the præcordia be painful, or excessive flatulence be present, or the urine discharged in an unconcocted state during the whole day, there is manifest crudity existing. Those who have a bad colour for a long time without jaundice, are either afflicted with pains of the head or pica (10).

Those, who have pallid and turgid countenances for a long time, have either

flictantur, vel terram edunt. Qui diu habent faciem pallidam et tumidam, aut capite, aut visceribus, aut alvo laborant. Si in continua febre puer venter nihil reddit, mutaturque ei color, neque somnus accedit, ploratque is assidue, metuenda nervorum distentio est. Frequens autem destillatio in corpore tenui longoque, tabem timendam esse testatur.

Ubi pluribus diebus non descendit alvus, docet, aut subitam dejectionem, aut febriculam instare. Ubi pedes turgent, longæ dejectiones sunt, ubi dolor est in imo ventre et coxis, aqua inter cætum instat. Sed hoc morbi genus ab ilibus oriri solet. Idem propositum periculum est iis, quibus voluntas desiderandi est, venter nihil reddit, nisi et ægre et durum, tumor in pedibus est, idemque modo dextra, modo sinistra parte ventris, invicem oritur atque finitur. Sed a jocinore id malum proficiisci videtur. Ejusdem morbi nota est, ubi circa umbilicum intestina torquentur, *στρόφους* Græci nominant, coxaeque dolores manent; eaque neque tempore, neque remediis solvuntur. Dolor autem articulorum, prout in pedibus, manibusve, aut alia qualibet parte sic

ORDO.

ribus capitis, vel edunt terram. Qui habent faciem pallidam diu et tumidam, aut laborant capite, aut visceribus, aut alvo. Si venter reddit pnero nihil in continua febre, que ei color mutatur, neque somnus accedit, que is plorat assidue, distentio nervorum est metnenda. Antem frequens destillatio in tenni que longo corpore testatur tabem esse timendum.

Ubi alvus non descendit pluribus diebus, docet aut subitam dejectionem, aut febriculam instare. Ubi pedes turgent, dejectiones sunt longæ; ubi dolor est in imo ventre et coxis, aqua inter cætum instat. Sed hoc genus morbi solet oriri ab ilibus. Idem periculum propositum iis quibus est voluntas desiderandi, venter reddit nihil, nisi et ægre et durum, tumor est in pedibus, que idem modo dextra, modo sinistra parte ventris, iuvicem oritur atque finitur. Sed videtur id malum proficiisci a jocinore. Est nota ejusdem morbi, ubi intestina circa umbilicum torquentur, (Græci nominant *στρόφους*, strophus) que dolores coxaæ manent; que ea neque solvantur tempore, neque remediis. Autem dolor articulorum, prout sie est in pedibus ve manibus, aut qua-

TRANSLATION.

some affection of the head, viscera, or intestines. If the alvine secretions be suppressed in a child under continued fever, and his complexion be changed, and he sleep not, but moan constantly, convulsion is to be apprehended. A frequent catarrheuma in a delicate tall person, evinces a consumption to be dreaded.

When the bowels have not been evacuated for several days, it portends a sudden diarrhea, or a slight fever to be at hand. When the feet become œdematos, and there are long continued purgings; when there are pains in the lower part of the abdomen and hips, dropsy⁽¹¹⁾ is not far distant. But this kind of disease is accustomed to arise from the ilia. The same danger is threatened to those who have a continual tenesmus, voiding little or nothing, with much difficulty, and hard. When there is a swelling in the feet, and the same takes place, sometimes in the right, sometimes in the left side of the abdomen alternately, the disease seems to proceed from the liver. It is a symptom of the same disease, when there are tortina, or twisting of the intestines about the nmbilicus, (which the Greeks call strophos) and permanent pains of the hip, which are neither relieved by time nor remedies.

But pains of the joints, as for instance, in the feet or hands, or in any other part,

est, ut eo loeo nervi contrahantur; aut si id membrum, ex levi causa fatigatum, aequo frigido, calidoque offenditur, ποδάγραν χειράγραν, vel ejus artieuli, in quo id sentitur, morbum futurum esse denuntiat.

Quibus in pueritia sanguis ex naribus fluxit, dein fluere desiit, hi vel capitis doloribus conflictentur necesse est, vel in artieulis aliquas exuleerationes graves habeant, vel aliquo morbo etiam debilitentur. Quibus foemini menstrua non proveniunt, necesse est capitis acerbissimi dolores sint, vel quaelibet alia pars morbo infestetur. Eademque iis perieula sunt, quibus artieulorum vitia, dolores tumoresque, sine podagra similibusque morbis, oriuntur, et desinunt: utique, si saepe tempora iisdem doleant, noctuque corpora insudant. Si frons prurit, lippitudinis metus est. Si mulier a partu vehementes dolores habet, neque alia praetera signa mala sunt, circa vicesimum diem aut sanguis per narres erumpet, aut in inferioribus partibus aliquid abseedet. Quicumque etiam dolorem ingentem circa tempora et frontem habebit, is alterutra ratione cum finiet; magisque, si juvenis erit, per sanguinis profusionem, si senior, per

TRANSLATION.

so that the nerves there be contracted: or that limb being fatigued by light exercise, suffer equally from heat and cold, we may expect that to be gout, either of the hand, foot, or of that joint in which it is felt.

Those who have epistaxis in their childhood, and then the hemorrhage cease afterwards, must necessarily be afflicted with head-ache, or have severe ulcerations in the joints, or the constitution may be debilitated by some chronic disease. Women who have obstructed catamenia, are necessarily subject to excruciating pains of the head, or some other part may be affected by disease. Similar periis are impending over those whose disorders, pains, and swelling of the joints come and go, without gout, and such like affections; especially if there be a frequent throbbing in the temples, and they have nocturnal perspirations. If the forehead itch, lippitudo is to be feared. If a woman have violent pains after parturition, and there be no other unfavourable symptoms, there will be an eruption of blood from the nostrils about the twentieth day, or an abscess will form in the inferior parts. Also, whoever shall have intense pain about the temples and forehead, will be relieved by one or other of these two ways; viz. if the person be young, more probably, by haemorrhage; if older, by suppuration. But a

suppurationem. Febris autem, quæ subito sine ratione, sine bouis signis finita est, fere revertitur.

Cui fauces sanguine et interdiu et noctu repletur, sic ut neque capitum dolores, neque præcordiorum, neque tussis, neque vomitus, neque febricula præcesserit, hujus aut in naribus, aut in faucibus ulcerus reperietur. Si mulieri inguen et febricula orta est, neque causa apparet, ulcerus in vulva est. TRANSLATION.

fever which has terminated suddenly, without some assignable cause, unattended by favourable symptoms, generally returns.

A person whose fauces are filled with blood, both during the day and night, shall find an ulcer either there, or in his nostrils, if neither pains of the head, nor of the præcordia, nor cough, nor vomiting, nor slight fever have preceded. If an inguinal tumor be followed by slight fever in a female, without apparent cause, an ulcer will be found in the womb. But thick urine, in which there is a white precipitate, indicates pain about the joints or about the viscera, and that is reason to fear impending disease. The same being green, implies, either pain of the viscera, or a tumefaction attended with some danger to be latent, or at least, the body not to be in a good condition. But if blood or matter be in the urine, either the bladder or the kidneys are ulcerated. If it be thick, and contain small caruncles, as if hairs, or if it give out bubbles and smell strong, and sometimes carry with it the appearance of sand, sometimes bloody; and if the hips be pained, and the parts which are between these and above the pubes; and if frequent eructations, sometimes a bilious retching; and the extremities become cold, and there is a frequent desire to micturate, but attended with great difficulty, and what is excreted thenee is like water, or red, or pale, yet affords little relief from it, and if the faeces

tamen in eo levamenti est, alvus vero cum multo spiritu redditur, utique in renibus vitium est. At si paulatim destillat, vel si sanguis per hanc editur, et in eo quaedam eruenta eonereta sunt, idque ipsum eum difficultate redditur, et eirea pubem interiores partes dolent, in eadem vesica vitium est.

Caleulosi vero his indieis eognoscuntur: diffieulter urina redditur, paulatimque, interdum etiam sine voluntate, destillat; eadem arenosa est; nonnunquam aut sanguis, aut eruentum, aut purulentum aliquid eum ea exēernitur; eamque quidam promptius reeti, quidam resupinati, maximeque ii, qui grandes ealeulos habent, quidam etiam inclinati reddunt, colemque extendendo, dolorem levant. Gravitatis quoque ejusdam in ea parte sensus est: atque ea ursu, omnique motu augetur. Quidam etiam, eum torquentur, pedes inter se, subinde mutatis viibus, implieant. Fœminæ vero oras naturalium suorum manibus admotis seabere erebro eoguntur: nonnumquam, si digitum admoverunt, ubi vesicæ eervicem is urget, ealeulum sentiunt.

At qui spumantem sanguinem exsereant, his in pulmone vitium est.

ORDO.

est paullum levamenti in eo, vero alvus redditur cum multo spiritu, utique vitium est in renibus. At si destillat paullatim, vel si sanguis editur per hanc, que id ipsum redditur eum difficultate, et interiores partes circa pubem dolent, vitium est in eadem vesica.

Vero calculosi cognoscuntur his indiciis: urua redditur difficulter, que destillat paullatim, interduin sine etiam voluntate; eadem est arenosa; aut nonnunquam sanguis, aut aliquid cruentum, purulentum exēernitur eum ea; que quidam reddunt eam promptius recti, quidam resupinati, que maxime ii, qui habent grandes calculos, quidam etiam inclinati, que levant dolorem, extendendo coleum. Est quoque sensus cuiusdam gravitatis in ea parte: atqne ea augetur ursu, que omni motu. Etiam quidam, eum torquentur, implieant pedes inter se, vicibus mutatis subinde. Vero feminæ coguntur scabere oras suorum naturalium cerebro, admotis manibus: nonnunquam si admoverunt digitum, ubi is urget cervicem vesicæ, sentiunt calenum.

TRANSLATION.

be expelled with much wind, then indeed the disease must be in the kidneys. But if the urine be voided in drops, or if blood be discharged together with some grumous elotted matter in it, and that with difficulty, and the interior parts about the pubes are in pain, the disease is in the bladder.

But those persons afflicted with *calculi*, are known by the following symptoms:—the urine escapes drop by drop and with difficulty, sometimes even involuntarily; also sandy: or sometimes blood, or bloody purulent matter is excreted with it; some render it more readily being ereet, some lying supine, especially those who have large caleuli; some also in an inclined posture, and they relieve the pain by extending the penis. There is also a sensation of weight in that part; which is increased by running, and every kind of motion. Some also, when they are writhing under the paroxysm cross their legs over one another alternately, occasionally changing the position. But females are often compelled to rub the external orifice of their labia pudendi by the application of their hands: sometimes they feel the calcnlus, if they apply the finger when it presses against the cervix of the bladder.

But they who expectorate frothy blood, have disease in the lungs. A pregnant

Mulieri gravidae sine modo fusa alvus elidere partum potest. Eadem si lae ex mammis profluit, imbecillum est quod intus gerit: durae mammæ, sanum illud esse, testantur. Frequens singultus, et præter consuetudinem continuus, jecur inflammatum esse, significat. Si tumores super ulcera subito esse desierunt, idque a tergo incidit, vel distentio nervorum, vel rigor timeri potest: at si a priore parte id evenit, vel lateris acutus dolor, vel insania exspectanda est; interdum etiam ejusmodi easum, quæ tutissima inter hæc est, profusio alvi sequitur.

Si ora venarum, sanguinem solita fundere, subito suppressa sunt, aut aqua inter cutem, aut tabes sequitur. Eadem tabes subit, si in lateris dolore orta suppuration intra quadraginta dies purgari non potuit. At si longa tristitia cum lougo timore et vigilia est, atræ bilis morbus subest. Quibus saepe ex naribus fluit sanguis, his aut lienis tument, aut capitidis dolores sunt; quos sequitur, ut quædam ante oculos tamquam imagines obversentur. TRANSLATION.

woman may have a miscarriage produced by severe purging. If the milk flow from her breasts, the foetus is weak: hard breasts show the child to be healthy. A frequent hiccup of longer duration than usual denotes inflammation of the liver. If the tumours around ulcers have suddenly disappeared, and those have happened in the posterior part of the body, either convulsions, or tetanus may be dreaded: but if on the fore part, either pleurisy or insanity is to be expected; sometimes a diarrhoea comes on in the sequel of such an event, which is the safest of all.

If the accustomed discharge of blood from the orifices of the haemorrhoidal veins be suddenly suppressed, either dropsy, or consumption follows. A consumption ensues also, if the suppurative matter generated in a pleurisy cannot be purged off withiu forty days. But if there have existed a long continued sadness, with timidity and vigilance, an atrabiliary disease is at hand. Those who are subject to a frequent epistaxis, have, either a tumefied spleen, or pains in the head: which are followed by visual illusions floating before the eyes. But those who have an enlargement of the spleen, have diseased gums, foul breath, or an haemorrhage in

est in erubibus mala ulcera, et ex his nigræ cicatrices fiant.

Quibus causa doloris, neque sensus ejus est, his mens labat. Si in ventrem sanguis eonfluxit, ibi in pus vertitur. Si a coxis, et ab inferioribus partibus dolor in pectus transit, neque ullum signum malum aecessit, suppurationis eo loeo perieulum est. Quibus sine febre aliqua parte dolor, aut prurigo, eum rubore et calore est, ibi aliquid suppurat. Urina quoque, quæ in homine sano paruæ liquida est, eirea aures futuram aliquam suppurationem esse denunciat.

Hæc vero, eum sine febre quoque vel latentium, vel futurarum rerum notas habeant, multo certiora sunt, ubi febris aecessit; atque etiam aliorum morborum tum signa nascuntur. Ergo protinus insaniam timenda est, ubi expeditior alienus, quam sani fuit, sermo est, subitaque loquacitas orta est, et hæc ipsa solito audaeior: aut ubi raro quis et vehementer spirat, venasque eoneitatas habet, præcordiis duris et tumentibus.

Oeulorum quoque frequens motus; et in capitis dolore offusæ oculis tenebræ; vel, nullo dolore substante, somnus erectus, continuataque nocte et die vigilia; vel prostratum contra consuetudi-

no.

fiunt in erubibus, et ex his nigræ cicatrices.

Quibus est causa doloris, neque sensus ejus, iis mens labat. Si sanguis confluxit in ventrem, ibi vertitur in pus. Si dolor transit a coxis, et ab inferioribus partibus in pectus, neque ullum malum signum aecessit, est perieulum eo loco suppurationis. Quibus est dolor aliqua parte sine febre, aut prurigo, cum dolore, et calore, ibi aliquid suppurat. Urina quoque, quæ est parum liquida in sano homine, denunciat aliquam suppurationem esse futuram circa aures.

Vero cum quoque hæc habeant notas sine febre vel latentium, vel rerum futurarum, sunt multo certiora, ubi febris aecessit; atque tum etiam signa aliorum morborum nascuntur. Ergo protinus insaniam timenda est, ubi sermo alius est expeditor quam sicut sani, que subita loquacitas est orta, et hæc ipsa audaeior solito: aut ubi quis spirat raro et vehementer, que habet venas concitatas, præcordiis duris et tumentibus.

Quoqnc frequens motus oculorum, et tenbrae offusæ oculis in dolore capitis; vel somnus erectus, nullo dolore substante, que vigilia continuata nocte et die; vel corpus prostratum in ventre econ-

TRANSLATION.

some part: if none of these appear, of a necessity, bad ulcers will arise in the legs, and dark cicatrices form after them.

In those who have a cause for pain, without a sense of it, the mind is disordered. If blood have flowed into the abdomen, there it is converted into pus. If a pain make a transit from the hips and the inferior parts to the chest, without the appearance of any bad symptom, there is a danger of a suppuration in that place. Those who have pain in any part without fever, or itching, with redness and heat, will have a suppuration there. Also the slightly turbid urine in a healthy man, is the herald of some suppurative process about to take place near the ears.

But since these diagnostic symptoms, even without a fever, maintain the characteristic marks of latent and future disorders, they are much more certain, when accompanied by fever; and also the symptoms of other diseases are developed.

Therefore when a person displays more alacrity than is natural to him, when he becomes more loquacious, and expresses himself with a daring rapidity of language, or when he breathes slowly but vehemently with much accelerated arterial action,

nem corpus in ventrem, sic ut ipsius alvi dolor id non coegerit; item, robusto adhuc corpore, insolitus dentium stridor, insaniae signa sunt. Si quid etiam abscessit, et antequam suppuraret, manente adhuc febre, subsedit, periculum afferit primum furoris, deinde interitus.

Auris quoque dolor acutus, cum febre continua vehementique, saepe mentem turbat; et ex eo easu juniores interdum intra septimum diem moriuntur: seniores tardius; quoniam neque aequaliter magnas febres experintur, neque aequiter insaniantur: ita sustinent, dum is affectus in pus vertatur. Suffusae quoque sanguine mulieris mammæ, furorem venturum esse, testantur.

Quibus autem longæ febres sunt, his aut abcessus aliqui, aut articulorum dolores erunt. Quorum faecibus in febre illiditur spiritus, instat his nervorum distentio. Si angina subito finita est, in pulmonem id malum transit; idque saepe intra septimum diem occidit: quod nisi incidat, sequitur ut aliqua parte suppuret. Deinde post alvi longam resolutionem, tormina;

ORDO.

tra consuetudinem sic ut dolor alvi ipsius non coegerit id; item, corpore adhuc robusto, insolitus stridor dentium, sunt signa insaniae. Etiam si quid abscessit, et antequam suppuraret, subsedit, febre adhuc manente, primum afferit periculum furoris, deinde interitus.

Quoqne acutus dolor anris, enim continua que vehementer febre saepe turbat mentem; et interdum juniores moriuntur ex eo easu intra septimum diem; seniores tardius; quoniam experintur neque aequiter magnas febres, neque aequiter insaniantur: ita sustinent dum is affectus vertatur in pus. Quoqne mammæ mulieris suffusæ sanguine, testantur furorem esse venturum.

Autem quibus sunt longæ febres, erunt his aut aliqui abcessus, aut dolores articulorum. Distentio nervorum instat his, quorum faecibus spiritus illiditur in febre. Si angina finita est subito, id malum transit in pulmonem; que id saepe oceedit intra septimum diem: nisi quod incidat, sequitur ut suppuret aliqua parte. Deinde post longam resolutionem alvi tormina; post

TRANSLATION.

the praecordia being hard and swollen, *madness* is immediately to be dreaded. A frequent movement of the eyes also, and a darkness suffused over them with concomitant pain in the head; or an uninterrupted vigilance both night and day without any pain; or lying prostrate on the abdomen contrary to custom, provided a pain in the bowel itself have not compelled the patient to that position; also an unusual grinding of the teeth, the body being as yet robust and healthy, are all premonitory symptoms of mania.

Also, if an abcess have formed in any part and subside before suppuration take place, the fever as yet remaining, it first indicates an apprehension of furor, and then of death.

Also an acute pain of the ear, with continued and violent fever, often perturbs the mind, and sometimes carries off the younger, within the seventh day; older persons more slowly, because their fevers are neither equally violent, nor do they rave so much: thus they sustain the disease until resolution be effected. A congestion of blood in the breasts of a female also denotes approaching madness.

But those who have long fevers, will be liable to have abscesses or pains of the articulations. Convulsions are not far distant from those, whose expirations are forcibly propelled against the fauces in fever. If angina suddenly disappear, a metastasis of that malady to the lungs is the consequence; and that often destroys the patient within the seventh day: and unless this take place, it follows, that it must suppurate in some part. Then, after long continued diarrhoea, tormina ensue; and

post hæc, intestinorum lævitas oritur ; post nimias destillationes, tabes ; post lateris dolorem, vitia pulmonum ; post hæc, insania ; post magnos fervores corporis, nervorum rigor, aut distentio ; ubi eaput vulneratum est, delirium ; ubi vigilia torsit, nervorum distentio ; ubi vehementer venæ super uleera moventur, sanguinis profluvium.

Suppuratio vero pluribus morbis excitatur. Nam si longæ febres sine dolore, sine manifesta causa remanent, in aliquam partem id malum ineumbit ; in junioribus tamen : nam in senioribus ex ejusmodi morbo quartana fere naseitur. Eadem suppuratio fit, si præcordia dura, dolentia ante vicesimum diem hominem non sustulerunt, neque sanguis ex naribus fluxit, maximeque in adolescentibus ; utique, si inter principia aut oculorum caligo, aut capitis dolores fuerunt : sed tum in inferioribus partibus aliquid abscedit. Aut si præcordia tumorem mollem habent, neque habere intra sexaginta dies desinunt, hæretque per omne id tempus febris : sed tum in superioribus partibus fit abscessus ; ac si inter ipsa viseera non fit, eirea aures erumpit.

Cumque omnis longus tumor ad suppurationem fere speetet, magis eo tendit

ORDO.

hæc lævitas intestinorum oritur ; post nimias destillationes, tabes ; post dolorem lateris, vitia pulmonum ; post hæc insania ; post magnos fervores corporis, rigor nervorum, aut distentio ; ubi caput est vulneratum, delirium : ubi vigilia torsit, distentio nervorum : ubi venæ super uleera moventur vehementer profluvium sanguinis.

Vero suppuratio excitatur pluribus morbis. Nam si longæ febres sine dolore remanent, sine manifesta causa, id malum incabit in aliquam partem, tamen in junioribus ; nam in senioribus quartana fere nascitur ex morbo ejusmodi. Suppuratio fit eadem, si præcordia dura, dolentia non sustulerunt hominem ante vicesimum diem, neque sanguis fluxit ex naribus, quemaxime in adolescentibus ; utique si inter principia aut caligo oculorum, aut dolores capitis fuerunt : sed tum aliquid abscedit in inferioribus partibus. Aut si præcordia habent mollem tumorem, neque desinunt habere intra sexaginta dies, que febris hæret per omne id tempus : sed tum abscessus fit in superioribus partibus ; ac si non fit inter viscera ipsa, erumpit eirea aures.

Que cum omnis longus tumor fere speetet ad suppurationem, is tendit eo magis, qui est in

TRANSLATION.

after these, lienteria ; after violent catarrhs, consumption ; after pleurisy, pulmonary disease ; after which, madness : after excessive heats of the body, tetanus or convulsion : after a wound of the head, delirium ; after being tortured by vigilance, convulsion : when the blood-vessels over ulcers are violently excited, haemorrhage will follow.

But suppuration is induced by various diseases ; for if chronic fevers, unattended with pain, remain without some manifest cause, the malady falls on some particular part ; especially in younger persons ; for in elderly people a disease of this kind generally assumes the form of quartan ague. Suppuration happens likewise, if the præcordia, being tense and painful, have neither carried off the patient before the twentieth day, nor epistaxis ensued (12) ; and particularly in young persons, if in the commencement of the disease they have had either dimness of the eyes, or pains of the head : but then, in this instance an abscess forms in the inferior extremities. But if there be a soft tumour in the præcordia, for sixty days, with concomitant fever during the whole of that time ; then an abscess will form in the superior parts : and if not in the viseera, it will break out about the ears.

Now as every indolent tumour generally tends to suppuration, so one arising in

is, qui in præcordiis, quam is, qui in ventre est; is, qui supra umbilicium, quam is, qui infra est. Si lassitudinis etiam sensus in febre est, vel in maxillis, vel in articulis aliquid abscedit. Interdum quoque urina tenuis et cruda sic diu fertur, ut alia salutaria signa sint; exque eo casu plerumque infra transversum septum (quod *διάφραγμα* Græci vocant) fit abscessus.

Dolor etiam pulmonis, si neque persputa, neque per sanguinis detractio-nem, neque per victus rationem finitus est, vomicas aliquas interdum excitat, aut circa vicesimum diem, aut circa tricesimum, aut circa quadragesimum, nonnumquam etiam circa sexagesimum. Numerabimus autem ab eo die, quo primum febricitavit aliquis, aut inhoriuit, aut gravitatem ejus partis sensit.

Sed hæ vomicæ modo a pulmone, modo a contraria parte nascuntur. Quod suppurat, ab ea parte, quam afficit, dolorem inflammationemque concitat; ipsum calidius est; et si in partem sanam aliquis decubuit, onerare eam ex pondere aliquo videtur. Omnis etiam suppuratio, quæ nondum oculis patet, sic deprehendi potest: si febris non dimitit, eaque interdiu levior est,

ORDO.

præcordiis, quam is, qui (est) in ventre; is, qui est supra umbili-cum, quam is, qui (est) infra. Etiam si est sensus lassitudinis in febre, aliquid abscedit vel in maxillis, vel in articulis. Inter-dum urina quoque fertur tenuis, et diu cruda, si et sint alia salu-taria signa; que ex eo casu ple-rumque abscessus fit infra trans-versum septum (quod Græci vo-cant *διάφραγμα* diaphragma).

Etiam dolor pulmonum, si finitus est neque per spnta, neque per detractionem sanguinis, neque per rationem virtus, inter-dum exeitat aliquas vomicas aut circa vicesimum diem, aut circa tricesimum, aut circa quadrage-simum, etiam nonnunquam circa sexagesimum. Autem numera-bimus ab eo die, quo aliquis febricitavit primum, aut inhoriuit, aut sensit gravitatem ejus partis.

Sed hæ vomicæ nascuntur modo a pulmone, modo a con-traria parte. Quod suppurat, concitat dolorem que inflamma-tionem ab ea parte, quam afficit; ipsum est calidus; et si aliquis deenbuit in sanam partem, vide-tur onerare eam ex aliquo pon-dere. Etiam omnis suppuratio, quæ nondum patet oculis potest deprehendi sie: si febris non di-mittit, que ea est levior interdin,

TRANSLATION.

the præcordia has a greater tendency to that issue, than that which is in the abdo-men; one above the umbiliens, more than one below it. Also, if there be a sensation of lassitude in fever, an abscess may form either in the maxillaries, or joints. Sometimes the urine is discharged for a long time in a thin, ernde state, yet the other symptoms may be salutary; and in such a case, an abscess is generally formed below the transverse septum, which the Greeks call diaphragm.

If peripnenmonia be neither removed by expectoration, blood-letting, nor by strict regimeu, it gives rise sometimes to imposthumies, either about the twentieth day, or thirtieth, or fortieth, and indeed sometimes about the sixtieth day. But we must reckon from that day, on which the patient became feverish, or shivered, or felt a sense of weight in the parts.

But these imposthumies are generated sometimes in the lung, sometimes in the parts opposite. Where the suppuration is going on, it excites pain and inflammation in the part which it affects; the heat is greater there; and if a person lie on the sound side, he will imagine that part oppressed with some weight. Also every suppuration, which is not evident, may be thus detected: if the fever do not renit, and it is

noctu increscit; multus sudor oritur; cupiditas tussiendi est, et pene nihil in tussi exscreatur; oculi cavi sunt; malæ rubent; venæ sub lingua inalbescent; in manibus fiunt adunei ungues; digitæ, maximeque summi, calent; in pedibus tumores sunt; spiritus difficultius trahitur; cibi fastidium est; pustulæ toto corpore oriuntur.

Quod si protinus initio dolor et tussis fuit, et spiritus difficultas, vomica vel ante vel circa vicesimum diem erumpet: si serius ista cooperint, necesse est quidem increscant; sed quo minus cito affecerint, eo tardius solventur. Solent etiam in gravi morbo pedes cum digitis unguibusque nigrescere; quod si non est mors consecuta, et reliquum corpus invalidit, pedes tamen decidunt.

ORDO.

increscit noctu; multus sudor oritur; est cupiditas tussiendi, et pene nihil exscreatur in tussi; oculi sunt cavi; malæ rubent; venæ sub lingua inalbescent; unguis in manibus fiunt adunei; digitæ que maxime summi, calent; sunt tumores in pedibus; spiritus trahitur difficultius; est fastidium cibi; pustulæ oriuntur toto corpore.

Quod si dolor et tussis fuit protinus initio, et difficultas spiritus, vomica erumpet vel ante, vel circa vicesimum diem: si ista cooperint serius, est necesse quidem increscant; sed quo minus cito affecerint, eo tardius solventur. TRANSLATION.

lighter by day, but increases at night; the perspiration is abundant; there is a provocative to cough, and scarcely any thing expectorated with it; the eyes are sunk, the cheeks flushed, the sublingual veins become pale; the finger nails grow curved; the fingers, especially their extremities, are hot; the feet are œdematos; respiration becomes difficult; there is a loathing of food; and pustules arise over the whole body.

But if there have been pain, cough, and dyspnœa from the commencement, the imposthume will burst either before or about the twentieth day: if these symptoms have begun later, they must of necessity increase; but by how much more slowly they develop themselves, they are proportionately tardy in their resolution. Indeed the feet, toes, and nails, are liable to become black (*mortify*) in a severe disease; and if death ensue not, and the rest of the body recover, yet the feet fall off.

CHAP. VIII.

THE FAVOURABLE AND UNFAVOURABLE SYMPTOMS IN CERTAIN DISEASES.

THE next in order that I describe are the diagnostic symptoms which may denote either hope or fear in each genus of disease. If purulent urine be discharged after pain in the bladder, depositing a smooth white precipitate in it, it allays our fear.

If the pain in pulmonary disease be mitigated by expectoration, although that be purulent, yet if the patient breathe easily, and expectorate freely, and sustain the disease itself without difficulty, he may recover his health. Nor need we be alarmed, even in the beginning, if the sputum be mixed, as if it were muco-purulent blood, provided that it cease immediately.

Pleurisies are terminated by suppuration having taken place, and being purged within forty days. If there be an imposthume in the liver, and pure white pus be discharged out of it, the recovery is easy; for that malady is in the membrane. But those suppurations are supportable which point externally: of those which proceed inwardly, they are more mild which do not affect the super-adjacent skin,

contra se cutem non afficiunt, eamque et sinc dolore et ejusdem coloris, cuius reliquæ partes sunt, sinunt esse.

Pus quoque, quacumque parte erumpit, si cst lœve, album, et unius coloris, sine ullo metu cst; et quo effuso, febris protinus eonquievit, desieruntque urgere cibi fastidium et potionis desiderium. Si quando etiam suppuratione descendit in crura, sputumque ejusdem factum pro rufo purulentum est, periculi minus est.

At in tabe ejus, qui salvus futurus est, sputum esse debet album, æquale totum, ejusdemque coloris, sine pituita; eique etiam simile esse oportet, si quid in nares a capite destillat. Longe optimum est, febre non omnino non esse; secundum est, tantulum esse, ut neque eibum impedit, neque crebram sitim faciat. Alvis in hac valetudine ea tutam est, quæ quotidie coacta, eaque convenientia iis, quæ assumuntur, reddit; corpus id, quod minime tenuc, maximeque lati pectoris atque setosi cst, cuiusque cartilago exigua, et earnosa est.

Super tabem si mulieri suppressa quoque menstrua fuerunt, et circa pectus atque scapulas dolor mansit, subitoque sanguis erupit, levari morbus solet: nam

TRANSLATION.

and permit it to be free from pain, and of the same colour as that of the surrounding parts.

If pus, from whatever part discharged, be smooth, white, and of a uniform colour, no danger is to be apprehended; and which matter being effused, the fever ceases immediately, then the aversion from food and desire of drink cease to oppress. Also, if at any time a suppuration fall into the legs, and the expectoration of that person have become purulent instead of reddish, there is less danger.

But in the consumption of that person, who is likely to recover, the expectoration ought to be white, of an equal consistence and colour, without phlegm: and if any thing be dropt, (seereted,) from the head into the nostrils, it ought to resemble it. It is by far the best, where there is no fever at all, next to this, that there be so little, as neither to prevent food being taken, nor excite a frequent thirst. In this complaint, that state of the bowels is most proper, which is relieved daily, and that too in quantity and consistence proportioned to the food taken; that person who is not over slender, and who has a very broad hairy chest, and the cartilage (*sternum*) of which is small and fleshy.

If amenorrhœa supervene consumption, and the pain remain about the chest and shoulders, and the catamenia suddenly return, the disease is generally re-

TRANSLATION.

lieved: for both the cough is diminished, and the thirst and slight fever cease. But for the most part, the vomica breaks in those persons, unless the eatamena return, and the more sanguinous, by that it is so much the better.

Now, that dropsy is least alarming, which has come on antecedently to any other disease; the next in degree is that which supervenes a chronic disease; especially, if the viseera be healthy; if respiration be easy; if there be no pain; if the body be cool, and equally lean in its extremities; if the abdomen be soft; if there be no cough; no thirst: if the tongue do not become parched during sleep; if there be a desire for food; if the bowels be moved by medicines; if the secretions be spontaneous, soft, and of a natural consistenee; if the abdomen be extenuated (13); if the urine alter with a change of wine and some medicinal potions; if the body be free from lassitude, and sustain the disease (14) easily: therefore a patient in whom all these symptoms meet, is in no danger whatever; where many of them appear, he has good reason to hope.

But if diseases of the joints, such as gout in the feet or hands, attack young persons, without having induced an induration of parts, they may be removed: and indeed they are relieved principally by purgatives and every mode of keeping the bowels relaxed.

Also epilepsy, arising before puberty, is terminated without difficulty: so is that

tatem ortus, non ægre finitur: et in quo ab una parte corporis venientis accessionis sensus incipit, optimum est a manibus pedibusve initium fieri; deinde, a lateribus; pessimum inter hæc, a capite. Atque in his quoque ea maxime prosunt, quæ per dejectiones excernuntur. Ipsa autem dejectio sine ulla noxa est, quæ sine febre est; si celeriter desinit; si contrectato ventre nullus motus ejus sentitur; si extremam alvum spiritus sequitur.

Ae ne tormina quidem periculosa sunt, si sanguis et strigmenta descendunt, dum febris ceteræque accessiones hujus morbi absint: adeo ut etiam gravida mulier, non solum reservari possit, sed etiam partum reservare. Prodestque in hoc morbo, si jam ætate aliquis processit.

Contra, intestinorum lœvitas facilius a teneris ætatibus depellitur; utique, si ferri urina, et ali cibo corpus incipit. Eadem ætas prodest et in coxæ dolore, et humerorum, et in omni resolutione nervorum. Ex quibus coxa, si sine torpore est, si leviter frigit, quamvis magnos dolores habet, tamen et facile et mature sanatur: resolutumque membrum, si nihilo minus alitur, fieri sanum potest. Oris resolutio etiam alvo eita

ORDO.

finitur ægre: et in quo sensus accessionis venientis incipit ab una parte corporis, initium est optimum fieri a manibus ve pedibus; deinde a lateribus: pessimum inter hæc a capite. Atque in his quoque ea prosunt maxime, quæ excernuntur per dejectiones.

Autem dejectio ipsa, quæ est sine febre, est sine ulla noxa; si desinit celeriter; si ventre contrectato nullus motus ejus sentitur; si spiritus sequitur extremam (partem) alvum.

Ac ne quidem tormina sunt periculosa, si sanguis et strigmenta descendunt, dum febris que æteræ accessiones hujus morbi absint: adeo ut gravida mulier etiam, non solum possit reservari, sed etiam reservare partum. Que prodest in hoc morbo, si aliquis processit jam ætate.

Lœvitas intestinalis (lienteria) contra, facilius depellitur a teneris ætatibus; utique si urina incipit ferri, et corpus ali cibo. Et prodest eadem ætas in dolore coxæ, et humerorum, et in omni resolutione nervorum: ex quibus si coxa est sine torpore, si friget leviter; quamvis habet magnos dolores, tamen sanatur et facile et mature: que resolutum membrum, si nihilominus alitur, potest fieri sanum. TRANSLATION.

in which there is a sensation (or, *aura epileptica*,) indicative of its approach, from some part of the body, and it is most favourable when this sensation originates in the hands or feet; then the next favourable symptom is that from the sides, but the worst of all is from the head. Therefore, in these cases also, those medicines do most good which excite the alvine secretions.

But a *diarrhœa* itself is innocuous when there is no fever; if it cease expeditiously; if the abdomen upon being handled produce no sensation of this on the feelings of the patient; if the alvine evaenations terminate with flatus. Neither is a *dysentery* dangerous, although blood and slimy mucus pass by stool, provided that fever and its usual concomitants be absent: so that even a pregnant woman may not only be saved, but her offspring also. A more favourable prognosis may be given in this disease, if the patient be a little advanced in life.

On the other hand, *lienteria* is more easily checked in a tender age; especially if the urine begin to flow, and the body be nourished by food. The same age is favourable for the recovery of pains in the hip and shoulders, and in every paralytic affection. Of these the hip, for instance, if it be without torpor, if its coldness be slight, although it may have great pain, yet it is to be restored both easily and speedily: and a paralysed limb, if it continue to be nourished, may be made sound.

finitur. Omnisque dejectio lippienti prodest.

At varix ortus, vel per ora venarum subita profusio sanguinis, vel tormina, insaniam tollunt. Humerorum dolores, qui ad scapulas vel manus tendunt, vomitu atræ bilis solvuntur: et quisquis dolor deorsum tendit, sanabilior est. Singultus sternutamento finitur. Longas dejectiones suppressit vomitus.

Mulier sanguinem vomens, profusis menstruis, liberatur. Quæ menstruis non purgatur, si sanguinem ex naribus fudet, omni periculo vacat. Quæ locis laborat, aut difficulter partum edit, sternutamento levatur. Aëstiva quartana fere brevis est. Cui calor et tremor est, saluti delirium est. Liconsis bono tormina sunt. Denique ipsa febris, quod maxime mirum videri potest, saepc præsidio est.

Nam et præcordiorum dolores, si sine inflammatione sunt, finit; et jocinoris dolori succurrit; et nervorum distentionem rigoremque, si postea coepit, ex toto tollit; et ex difficultate urinæ morbum tenuioris intestini ortum, si urinam per calorem movet, levat.

At dolores capitis, quibus oculorum caligo, et rubor cum quadam frontis

ORDO.

oris finitur cito alvo. Que omnis dejeetio prodest lippienti.

At varix ortus, vel subita profusio sanguinis per ora venarum, vel tormina, tollunt insaniam. Dolores humerorum qui tendunt ad scapulas vel manus, solvantur vomitu atræ bilis: et quisquis dolor tendit deorsum, est sanabilior. Singultus finitur sternutamento. Vomitus suppressit longas dejectiones.

Mulier vomens sanguinem liberatur, menstruis profusis. Quæ non purgatur menstruis, si fudit sanguinem ex naribus, vacat omni periculo. (Illa) quæ labrat loeis (uteri), aut edit partum difficulter, levatur sternutamento. Aëstiva quartana est fere brevis. Cui est calor et tremor, delirium est saluti. Tormina sunt bono lienosis. Denique, febris ipsa, quod potest videri maxime mirum, saepe est præsidio.

Nam finit et dolores præcordiorum, si sunt sine inflammatione; et sueurrit dolori jocinoris; et tollit distensionem que rigorem nervorum ex toto, si ecepit postea; et levat morbum tenuioris intestini ortum ex difficultate urinæ, si movet urinam per calorem.

At dolores capitis, quibus eas ligio oculorum, et rubor eum quadam prurigine frontis aeee-

TRANSLATION.

Paralysis of the mouth also, is cured by a loose state of the bowels. All relaxations of the bowels are advantageous to those having ophthalmia.

But a varix arising, or a sudden haemorrhage from the months of veins, or a dysentery, removes madness. Pains of the shoulders which tend to the scapulae, or the hands, are dissipated by vomiting of black bile: and whatever pain tends downwards is more curable. Hiccough is removed by sneezing. Vomiting suppresses chronic diarrhoea.

A vomiting of blood in a female is terminated by a return of the catamenia. A chlorotie female is freed from all danger by epistaxis. One who is hysterie (15), or brings forth her offspring with difficulty, is relieved by sneezing. A summer quartan is usually of short duration: to one who has heat and trembling, a delirium is salutary. Dysenteries are advantageous to the splenetic. Lastly, even fever itself, which may appear very wonderful, is often a *remedial* agent.

For it carries off pains of the præcordia, if these be without inflammation; and relieves pains of the liver; entirely removes convulsions and tetanus, if it supervene upon these: it alleviates that disease of the smaller intestine arising from stranguria, if it promote urine by heat. But pains of the head, accompanied by dimness of the

prurigine aeedunt, sanguinis profusione, vel fortuita, vel etiam petita, summoventur. Si eapitis, ac frontis dolores ex vento, vel frigore, aut æstn sunt, gravedine et sternutamentis finiuntur. Febrem autem ardente, quam Græci *καυσώδην* vocant, subitus horror exsolvit. Si in febre aures obtusæ sunt, si sanguis e naribus fluxit, aut venter resolutus est, illud malum desinit ex toto.

Nihil plus adversus surditatem, quam biliosa alvus potest. Quibus in fistula urinæ minuti abcessus, quos φύματα Græci vocant, esse cœperunt, iis, ubi pus ea parte profluxit, sanitas redditur. EX QUIBUS CUM PLERAQUE PER SE PROVENIANT, SCIRE LICET, INTER EA QUOQUE, QUÆ ARS ADHIBET, NATURAM PLURIMUM POSSE.

Contra, si caput febre continentidolet, neque quidquam reddit, malum atque mortiferum est; maximeque id perieulum est pueris, a septimo anno ad quartumdecimum. In pulmonis morbo, si sputum primis diebus non fuit, deinde a septimo die cœpit, et ultra septimum mansit, perieulosum est; quantoque magis mistos, neque inter se diductos colores habet, tanto deterius.

TRANSLATION.

eyes and redness, with a certain itching of the forehead, are removed by a discharge of blood, either fortuitous or extracted.

If pains of the head and forehead arise from wind, or cold, or heat, they are carried off by a catarrheum and sneezing. But a sudden shivering terminates that ardent fever which the Greeks call *kausode* (*καυσώδην*). If the auditory organs be obtuse in fever, an epistaxis or diarrhoea puts an end to the malady entirely.

Nothing can be more advantageous against deafness than biliary stools. Those who have minute abscesses forming in the urethra, which the Greeks call phymata, (*φύματα*,) are cured when a puriform discharge takes place from that part (16). BY WHICH CHANGES, SINCE MANY OF THEM ARISE SPONTANEOUSLY, WE MAY FAIRLY CONCLUDE THAT NATURE CAN ALSO GIVE GREAT EFFECT TO THOSE REMEDIES ADMINISTERED BY ART.

On the contrary, if the head be painful in continued fever without any remission (17), it is a bad and mortal symptom: and children from their seventh to their fourteenth year are particularly liable to this danger. In pneumonia, if there have been no expectoration on the first days, but this arises on the seventh day, and continues beyond that time*, it is dangerous: and the more intimately mixed the excretions seem to be, assuming a uniform colour and consistence, so much the worse.

ORDO.

dunt, submoventur profusione sanguinis, vel fortuita, vel etiam petita. Si sunt dolores capitis ac frontis ex vento, vel frigore, aut æstn, finiuntur gravedine et sternutamentis. Autem subitus horror exsolvit ardente febrem, quam Græci vocant *καυσώδην* (*kausode*). Contra, si caput dolet continentidolet febre, neque reddit quidquam, est malum atque mortiferum; que id periculum est maxime pueris a septimo anno ad quartumdecimum. Iu morbo pulmonis, si sputum non fuit primis diebus, deinde cœpit a septimo die, et mansit ultra septimum, est perieulosum: que quanto magis habet colores mixtos, neque diductos inter se tanto deterius.

* i. e. 14th day.

Et tamen nihil pejus est, quam sincerum id edi, sive rufum est, sive cruentum, sive album, sive glutinosum, sive pallidum, sive spumans: nigrum tamen pessimum est. In eodem morbo periculosa sunt tussis, destillatio; etiam, quod alias salutare habetur, sternutamentum: periculosissimumque est, si haec secuta subita dejectio est. Fere vero quae in pulmonis, eadem in lateris doloribus, et mitiora signa, et asperiora esse consuerunt.

Ex jocinore si pus cruentum exit, mortiferum est. At ex suppurationibus eae pessimae sunt, quae intus tendunt, sic ut exteriorem quoque entem deo-
lorent: ex iis deinde, quae in exteriorem partem prorumpunt, quae maximae, quaeque planissimae sunt. Quod si, ne
rupta quidem vomica, vel pure extrinse-
cus emissio, febris quieverit, aut quamvis quieverit, tamen repetit; item si sitis est, si cibi fastidium, si venter liquidus,
si pus est lividum et pallidum, si nihil æger exscreat nisi pituitam spumantem,
periculum certum est. Atque ex iis quidem suppurationibus, quas pulmonum morbi concitarunt, fere senes moriuntur; ex ceteris juniores.

At in tabe sputum mistum purulen-

ORDO.

Et tamen nihil est pejus quam id edi sincerum; sive est rufum, sive cruentum, sive album, sive glutinosum; sive pallidum, sive spumans; tamen nigrum est pessimum. In eodem morbo, tussis et destillatio sunt perien-
losa; etiam sternutamentum, quod alias habetur salutare; que est periculosissimum, si dejectio subito est secuta haec. Vero fere signa quae eosuerunt esse et mitiora, et asperiora in doloribus pulmonis (sunt) eadem in lateris.

Si cruentum pus exit ex jocinore, est mortiferum. At ex suppurationibus pessimae sunt eae, quae tendunt intus, si ne de-
colorent entem exteriorem quoque: deinde ex iis quae prorumpunt in exteriorem partem, sunt quae maxime, que quae (sunt) planissimae. Quod si febris qui-
evit, ne quidem vomica rupta, vel pure emissio extrinsecus, aut quamvis quieverit, tamen re-
petit; item si est sitis, si fastidi-
um cibi, si venter (sedes sunt)
liquidus, si pus est lividum et pallidum, si æger exscreat nihil nisi spumantem pituitam, est certum periculum. Atque ex his suppurationibus quidem, quas morbi pulmonum concitarunt, se-
nes fere moriuntur: juniores ex cæteris.

At in tabe, mixtum purulen-

TRANSLATION.

And yet nothing can be worse than for it to be expectorated in one homogeneous mass; whether it be reddish, or bloody, or white, or glutinous, or pale, or frothy; yet black is the worst. When cough and catarrh meet in the same disease, they are dangerous; also sneezing, which in other cases is accounted salutary; and it is most dangerous if sudden purging have followed. But, generally, the symptoms which are accustomed to be held favourable or unfavourable in *Pneumonia* are applicable to *Pleurisies* also.

If bloody pus be discharged from the liver, it is mortal. But of these suppurations, the worst are those which tend inwards, and discolour the opposite external surfaces: then, those which break externally, the largest and flattest are the most dangerous. But if the fever have subsided, the vomica not being burst, or the matter discharged externally; or, although it shall have subsided, yet return; also, if there be thirst, loathing of food, or liquid stools, if the matter be livid and pale, if the patient expectorate nothing but frothy phlegm, the danger is inevitable. Consequently, old persons generally die of these suppurations, which arise from diseases of the lungs: younger persons from other kinds.

But, in consumption, a muco-purulent expectoration, constant fever which

tum, febris assidua, quæ et cibi tempora eripit, et siti affigit, in corpore tenui periculum subesse testantur. Si quis etiam in eo morbo diutius traxit, ubi capilli fluunt; ubi urina quædam araneis similia subsidentia ostendit, atque in his odor foedus est; maximeque ubi post hæc orta dejectio est, protinus moritur: utique si tempus autumni est, quo fere, qui cetera parte anni traxerunt, resolvuntur. Item pus expusse in hoc morbo, deinde ex toto spuere desissee, mortiferum est. Solent etiam in adolescentibus ex eo morbo vomicæ fistulæque oriri; quæ non facile sanescunt, nisi si multa signa bonæ valetudinis subsecuta sunt. Ex reliquis vero minime facile sanantur virgines, aut cæ mulieres, quibus super tabem menstrua suppressa sunt.

Cui vero sano subitus dolor capitis ortus est, dein somnus oppressit, sic ut stertat, neque expurgiscatur, intra septimum diem pereundum est; magis, cum alvus cita non antecesserit, si palpebræ dormientis non coeunt, sed album oculorum appetet. Quos tamen ita mors sequitur, si id malum non est febre discussum.

TRANSLATION.

leaves no intermission for food, and distressing thirst, are the prognoses of danger being not far off, if they occur in a delicate frame. Also, if a patient have lingered long in the same disease, and then the hair fall off; when the urine deposits something resembling cobwebs, and gives off a fetid smell, and, particularly, when purgings supervene these symptoms, he soon dies: especially if in autumn, which season generally carries off those who have lingered through the rest of the year. Also, to have expectorated pus in this disease, afterwards to have entirely ceased to do so, is a fatal symptom. It is not uncommon for this disease to arise from tubercles or fistulae in young people (18); which are very difficult of recovery, unless accompanied by many favourable symptoms. But young females, and others who have suppression of the catamenia accuring upon consumption, are least easily cured.

A healthy person having a sudden pain arise in his head, and falling into a deep sleep, with stertorous breathing, and cannot be awakened, must die within the seventh day; more especially if the bowels have not been previously relaxed; if the eyelids do not close in sleep, but leave the white of the eyes apparent: but he whom death pursues in this manner, may escape that catastrophe by fever.

ORDO.

tum sputum assidua febris, qua eripit tempora cibi, et affigit siti, in temni corpore testatur periculum subesse. Etiam si quis traxit diutius in eo morbo, ubi capilli fluunt; ubi urina ostendit quædam subsidentia similia araneis; atque foedus odor est in his; que maxime ubi dejectio orta est post hæc moritur protinus; utique si est tempus autumni, quo fere (iis) resolvuntur qui traxerunt cætera parte anni. Item expusse pus in hoc morbo, deinde desissee spuere ex toto, est mortiferum. Etiam vomieæ ve fistulæ solent oriri in adolescentibus ex eo morbo; quæ non sanescunt facile, si nisi multa signa bonæ valetudinis subsecuta sunt. Vero ex reliquis virgines sanantur minime facile, aut eæ mulieres super quibus tabem menstrua sunt suppressa.

Vero sano eni subitus dolor capitis ortus est, dein somnus oppressit, sic ut stertat, neque expurgiscatur, percundum est intra septimum; magis cum cœta alvus non antecesserit, si palpebræ dormientis non coeunt, sed album oculorum appetet. Tamen quos mors sequitur ita, si id malum non est discussum febre.

At aqua inter cutem, si ex acuto morbo cœpit, ad sanitatem raro perducitur: utique si contraria iis, quæ supra posita sunt, subsequuntur. Æquic in ea quoque tussis spem tollit: item, si sanguis sursum dcorsumque erupit, et aqua medium corpus implevit. Quibusdam etiam in hoc morbo tumores oriuntur, deinde desinunt, deinde rursus assurgunt. Hi tutiores quidem sunt, quam qui supra comprehensi sunt, si attendunt; sed fere fiducia secundæ valetudinis opprimuntur.

Illud jure aliquis mirabitur, quomodo quedam simul et affligant nostra corpora, et parte aliqua tueantur. Nam, sive aqua inter cutem quem implevit, sive in magno abscessu multum puris coiit, simul id omne effudisse, æque mortiferum est, ac si quis sani corporis vulnere factus exsanguis est.

Articuli vero cui sic dolent, ut super eos ex callo quedam tubercula innata sint, numquam liberantur: quæque eorum vitia vel in senectute cœperunt, vel in senectutem ab adolescentia pervenerunt, ut aliquando leniri possunt, sic numquam ex toto finiuntur.

Morbus quoque comitialis post annum quintum et vicesimum ortus ægre

ORDO.

At aqua inter cutem, si cœpit ex acuto morbo, perducitur raro ad sanitatem: utique si (signa) contraria iis, quæ posita sunt supra subsequuntur. Quoque tussis in ea aquæ tollit spem: item si sanguis erupit sursum que deorsum, et aqua implevit medium corpus (id est venter). Quibusdam etiam in hoc morbo tumores oriuntur, deinde desinunt, deinde assurgunt rursus. Hi quidem sunt tutiores, si attendunt, quam (iis) qui sunt comprehensi supra; sed fere opprimuntur fiducia secundæ valetudinis.

Aliquis mirabitur illud jure, quomodo quedam et simul affligant nostra corpora, et tueantur aliqua parte. Nam, sive aqua inter cutem implevit quem, sive multum puris coiit in magno abscessu, (que) effudisse omne id simul est æque mortiferum, ac si quis sani corporis est factus exsanguis vulnere.

Vero enī articuli dolent, sic ut quedam tubercula ex callo sint innata super eos, nunquam liberantur: que vitia eorum quæ vel cœperunt in senectute, vel pervenerunt ab adolescentia in senectutem, ut possunt leniri aliquando, sic nunquam finiuntur ex toto.

Quoque morbus comitialis ortus (*Epilepsia*) post quintum et

TRANSLATION.

But a dropsy originating from an acute disease is rarely cured; especially if followed by the contrary symptoms to those which have been stated above.

A cough is equally hopeless in this also: if hemorrhage take place either upwards or downwards, and water accumulate in the abdomen (*Ascites*). Swellings also arise in this disease with some persons, which afterwards subside, and then appear again. These, indeed, are safer, if they take care, than those who have been comprehended above; but they are generally betrayed by a confidence of their recovery.

Some persons will wonder at this, and with reason too, how some maladies both afflict our bodies, and at the same time protect them in some part. For, whether one be distended with water, or a quantity of pus be collected in a large abscess, to discharge all this or that, at once, is equally as dangerous as if a healthy person were to lose all his blood by a wound.

But if the joints be affected to that degree, so as to exhibit the form of indurated tubercles upon them, they are never cured: and those vitiated parts, which have either commenced in old age, or have continued from their youth upwards, although they may be sometimes alleviated, yet they can never be entirely removed.

Epilepsy also arising after the twenty-fifth year, is cured with difficulty; and

curatur; multoque ægrius is, qui post quadragesimum annum eccepit; adeo ut in ea ætate aliquid in natura spei, vix quidquam in medicina sit. In eodem morbo, si simul totum corpus affieitur, neque ante in partibus aliquis *venientis* mali sensus est, sed homo ex improviso coneidit, eujuseumque is ætatis est, vix saneseit: si vero aut mens læssa est, aut nervorum facta resolutio, medicinæ loens non est.

Dejectionibus quoque si febris aeeedit; si inflammatio jœinoris, aut præcordiorum, aut ventris; si immodeia sitis; si longius tempus; si alvus varia; si eum dolore est, etiam mortis perieulum subest: maximeque, si inter hæc tormina vetera esse eæperunt. Isque morbus maxime pueros absumit usque ad annum decimum: cæteræ ætates facilius sustinent. Mulier quoque grava ejusmodi easu rapi potest; atque etiamsi ipsa convaluit, partum tamen perdit. Quin etiam tormina ab atrabile orsa mortifera sunt; aut si sub his, extenuato jam corpore, subito nigra alvus profluxit.

At intestinorum lævitas perieulosior est, si frequens dejectio est; si venter omnibus horis et eum sono et sine hoe profluit; si similiter noctu et interdiu;

ORDO.

vicesimum annum ægre enratur; que is, qui cœpit post quadragesimum annum, multo ægrius; adeo, ut in ea ætate aliquid spei sit in natura, vix quidquam in medicina. In eodem morbo, si totum corpus afficitur simul, neque est sensus ante mali aliquis partibus *venientis*, sed homo, concidit ex improviso, eujuscunque ætatis is est, vix saneseit: vero, si ant mens est hesa, aut resolutio nervorum (paralysis) facta, non est locns medicinæ.

Qnoque si febris aecessit dejectionibus; si inflammatio jœinoris, aut præcordiorum, aut ventris; si sitis (est) immodica; si tempus (sunt) longius; si alvus (faeces sunt) varia; si est (sunt) cum dolore; etiam periculum mortis subest: que maxime si tormina inter hæc eæperunt esse vetera. Que is morbus absumit maxime pueros, usque ad decimum annum: cæteræ ætates facilius sustinent. Gravida mulier quoqne potest rapi easu ejusmodi; atque etiamsi convaluit ipsa, tamen perdit partum. Quin etiam tormina orsa ab atrabile sunt mortifera; aut si sub his, corpore jam extennato, nigra alvus (scds) subito profluxit.

At lævitas intestinalis (lienaria) est perienlosior, si dejeetio est frequens; si venter profluit omnibus horis et cum sono, et sine hoc; si similiter noctu et inter-

TRANSLATION.

that which has begun after the fortieth year, is much more so; therefore, at this age, there may be some hope in (the efforts of) nature, but none in (the efficacy of) medicine. If the whole of the body be affected in the same disease simultaneously, without any premonitory sensation of the approaching fit coming from any part, but the man falls unawares, whatever his age may be, he scarcely can recover; but if either the mind be injured, or (the body) paralysed, no medicine can avail.

If fever accede on diarrhoea; if inflammation of the liver, or of the præcordia, or of the abdomen; if the thirst be immoderate; if the disease have become chronic; if the motions be variegated and expelled with pain, a fatal termination may be looked for; and particularly if tormina, with other symptoms, have become chronic. This disease mostly carries off children under ten years of age: the other ages sustain it more easily. A pregnant woman may be snatched off by an accident of this sort; and, although she should recover her health, yet she loses her offspring. So also is a dysentery fatal, arising from atrabilis; or a sudden black alvine discharge, the body being previously wasted by the disease.

But lienteria is more dangerous, if the purging be frequent; if the evacuations take place at all hours with or without flats; if it continue equally night and day;

si quod excernitur, aut crudum est, aut nigrum, et praeter id, etiam lœvc, et mali odoris; si sitis urget; si post potionem urina non redditur (quod evenit, quia tunc liquor omnis non in vesicam, sed in intestina descendit); si os exulceratur, rubet facies, et quasi maculis quibusdam colorum omnium distinguitur; si venter est quasi fermentatus, pinguis atque rugosus; si et cibi cupiditas non cst. Inter quæ cum evidens mors sit, multo evidentior est, si jam longum quoque id vitium est; maxime etiam si in corpore senili est. Si vero in tenuiore intestino morbus est, vomitus, singultus, nervorum distentio, delirium, mala sunt.

At in morbo arquato, durum fieri jecur, perniciosissimum est. Quos licnis male habet, si tormina prehenderunt, deinde versa sunt vel in aquam inter cutem, vel in intestinorum lœvitatem, vix ulla medicina periculo subtrahit.

Morbus intestini tenuioris nisi resolutus est, intra septimum diem occidit. Mulier ex partu, si cum febre vehementibus et assiduis capitatis doloribus premitur, in periculo mortis est.

ORDO.

diu; si (id) quod excernitur, est aut erudum aut nigrum, et præter id, etiam lœve, et mali odoris; si sitis urget; si urina non redditur post potionem; quod evenit quia tunc omnis liquor non descendit in vesicam, sed in intestina; si os exulceratur, facies rubet, et distinguitur quasi quibusdam maculis omnium colorum; si venter est quasi fermentatus, pinguis atque rugosus; et si est non epiditas cibi. Inter quæ (signa) eum mors sit evidens, est multo evidentior, si id vitium est quoque jam longum; etiam maxime, si est in senili corpore. Vero si est morbus in tenuiore intestino, vomitus, singultus, distentio nervorum, delirium, sunt mala.

At in morbo arquato (iecterns) est perniciosissimum, jecur fieri durum. Si tormina (dysenteria) prehenderunt quos licnis habet male, deinde sunt versa vel in aquam inter cutem, vel in lœvitatem intestinalium, vix illa medicina subtrahit periculo.

Nisi morbus tenuioris intestini est resolutus intra septimum diem oecidit. Mulier ex (post) partu est in periculo mortis, si cum febre premitur, etiam vehementibus et assiduis doloribus ca-

TRANSLATION.

if that which is excreted be either ernde or black, and also smooth and fœtid; if thirst oppress; if the urine be not promoted after drink, which happens, because then all the fluids pass not into the bladder, but into the intestines; if the mouth be ulcerated, the face red, and marked as if by some spots of all colors; if the abdomen appear puffed, as if tympanitic, fat and wrinkled (19); if there be no appetite for food. Since death may be very evident among these symptoms, it will be much more apparent if the disease have existed long; and particularly in an aged person. But if there be a disease of the smaller intestines, vomiting, hiccough, convulsions, and delirium are bad symptoms.

In iecterns, the most unfavorable symptom is induration of the liver. Those who have splenitis, being seized with dysentery, which afterwards give origin to dropsy and lienteria, it is scarcely in the power of medicine to rescue them from danger.

The disease of the smaller intestine destroys the patient unless resolution takes place within the seventh day. A woman, after parturition, is in imminent danger if she be seized with fever, and with violent and constant pains of the head. If

Si dolor atque inflammatio est in iis partibus, quibus viscera continentur, frequenter spirare, signum malum est.

Si sine causa longus dolor capitis est, et in cervicibus ac scapulas transit, rursusque in caput revertitur, aut a capite ad cervicibus scapulasque pervenit, pernicio-sus est : nisi vomieam aliquam excitavit, sic ut pus extussiretur ; aut nisi sanguis ex aliqua parte prorupit ; aut nisi in capite multa porrigo, totove corpore pustulae ortae sunt.

Æque magnum malum est, ubi torpor atque prurigo pervagantur, modo per totum caput, modo in parte; aut sensus alienus ibi quasi frigoris est; eaque ad summam quoque linguam perveniunt. Et cum in iisdem abscessibus auxilium sit, eo tamen difficilior sanitas est, quo minus saepe sub his malis illi subsequuntur.

In coxae vero doloribus, si vehemens torpor est, frigescitque erus et coxa; alvus nisi coaeta non reddit, idque quod exereenit, mueosum est; jamque ætas ejus hominis quadragesimum annum excessit; is morbus erit longissimus, minimumque annus; neque finiri poterit, nisi aut vere, aut autumno. Difficilis æque curatio est, in eadem ætate,

ORDO.

pitis. Si est dolor atque inflammatio in iis partibus, quibus viscera continentur, est malum signum spirare frequenter.

Si est longus dolor capitis sine causa, et transit in eervicibus que scapulas, que rursus revertitur in caput, aut pervenit a capite ad cervicibus que scapulas, est perniciosus : nisi excitavit aliquam vomicam, sic ut pus extussiretur ; aut nisi sanguis prorupit ex aliqua parte, aut nisi multa porrigo (apparet) in capite, ve pustulae ortae sunt toto corpore.

Est æque magnum malum, ubi torpor atque prurigo pervagantur, modo per totum caput, modo in parte; aut est sensus quasi alicuius frigoris ibi; que ea perveniunt quoque ad summam lingnam. Et cum sit auxilium in iisdem abscessibus, tamen sanitas est difficilior eo, quo minus saepe illi subsequuntur sub his malis.

Vero in doloribus coxae, si torpor est vehemens, que crns et coxa frigescit; nisi alvus non reddit, nisi coaeta, que id quod exereenit, est micosum; que ætas jam ejus hominis excessit quadragesimum annum; is morbus erit longissimus, que (ad) minimum annus; neque finiri poterit, nisi aut vere, aut autumno. Curatio est æque difficilis, in ea-

TRANSLATION.

there be pain and inflammation in those parts, which contain the viscera, hurried respiration is a bad symptom.

If there have been a long continued pain in the head without any evident cause, and this migrate to the neck and shoulders, and again revert to the head, or passing from the head to the neck and shoulders, it is dangerous; unless it excite a vomita, so that pus may be expectorated; or unless haemorrhage take place from some part, or a copious porrigo appear on the head, or pustules arise over the whole body.

It is an equally formidable disease when torpor and itching wander about; sometimes over the whole head, sometimes in a part of it; or a sensation of cold is felt there, and that also reaches to the tip of the tongue. But although in these cases abscesses may prove beneficial, yet the recovery of health is the more difficult by these means, in proportion, as they seldom succeed those diseases.

But in pains of the hip, if the torpor be great, and the leg and thigh be cold, the bowels constipated, unless they be assisted, and that which is excreted is mucus, and the age of the patient have exceeded his fortieth year; the disease will be very long, and will last a year at least; neither will it be possible to remove it, unless it be either in the spring, or autumn. A cure will be equally difficult in the same age,

ubi humerorum dolor vel ad manus per-
venit, vel ad scapulas tendit, torporem-
que et dolorem creat, neque bilis vomi-
tu levatur.

Quacumque vero parte corporis mem-
brum aliquod resolutum est, si neque

TRANSLATION.

when there is some affection of the shoulders tending towards the hands or the shoulder blades; and produces a numbness and pain, neither is it relieved by a bilious vomiting.

Whatever limb becomes paralysed, if it have no motion, and waste away, it will not regain its former condition, and the probability of recovery will be proportioned to the term occupied by the disease and the age of the patient. The autumn and winter are improper seasons for the treatment of paralysis of every kind; there may be some hope in spring and summer: when this disease is moderate, it may be cured with difficulty, but when violent it cannot be cured at all. Also every pain which moves upwards is less under the control of treatment.

If the mammae of a pregnant woman become suddenly shrunk, there is danger of abortion. If a woman, who have neither given birth to a child, nor being pregnant, have milk in her breasts, her monthly courses have been suppressed. An autumnal quartan is generally chronic, especially that which begins on the approach of winter. If dementia and convulsions follow upon haemorrhage, there is danger of death: also if convulsion seize a person purged by medicine, and as yet empty or if the extremities be cold during great pain. Neither can he be re-

CHAP. IX.

OF THE TREATMENT OF DISEASES.

THE symptoms being made known, which may either console us with hope, or terrify us with fear, we must now proceed to the treatment of diseases. Of these some are common, some particular: the common are those which relieve several diseases; the particular are adapted to one only. In the first place I shall speak of the common; some of which relate to the preservation of health as well as the recovery of the sick.

Now every remedial agent applied to the body, either abstracts some material from it, or adds to it, or calls it forth, or represses it, or cools, or warms, and at the same time either hardens, or softens it. Some things assist not only in one mode, but also in two, not incompatible with each other. The abstraction of ma-

guinis detractione, cueurbitula, dejectione, vomitu, frictione, gestatione, omniue exercitacione corporis, abstinentia, sudore. De quibus protinus dieam.

CHAP. X.

OF BLOOD-LETTING.

IT is not a new praetice to let blood by the incision of a vein: but it is new, to embrace this remedy in almost every disease. Again, to extract blood from younger persons, and non-pregnant women, is of ancient date: for indeed the ancients adjudged the two extremes of life ineapable of supporting this remedy; and they had persuaded themselves, that a pregnant woman, who might have been treated in this manner would misarry. But subsequent praetice has proved, that none of these precepts are infallible; and that some other eircumstances were rather to be regarded, and to which the aim of the physician ought to be directed. *For we*

ENIM, NON QUÆ ÆTAS SIT, NEQUE QUID IN CORPORE INTUS GERATUR, SED QUÆ VIRES SINT. Ergo si juvenis imbecillus est, aut si mulier, quæ gravida non est, parum valet, male sanguis mittitur : emoritur enim vis, si qua supererat, hoc modo crepta.

At firmus puer, et robustus senex, et gravida mulier valens, tuto euratur. Maxime tamen in his medieus imperitus falli potest: quia fere minus roboris illis ætatibus subest; mulierique prægnanti post eurationem quoque viribus opus est, non tantum ad se, sed etiam ad partum sustinendum. Non quidquid autem intentionem animi et prudentiam exigit, protinus ejiciendum est; eum præcipua in hoc ars sit, quæ non annos numeret, neque conceptionem solam videat, sed vires aestimet, et ex eo colligat, possit neene superesse, quod vel puerum, vel senem, vel in una muliere duo corpora simul sustineat.

Interest etiam inter valens corpus, et obesum; inter tenuem, et infirmum: tenuioribus magis sanguis, plenioribus magis caro abundat. Facilius itaque illi detractionem ejusmodi sustinent; celeriusque ea, si nimium est pinguis, aliquis affligitur. Ideoque vis corporis

ORDO.

non quæ sit ætas, neque quid geratur intus in corpore, sed quæ sint vires. Ergo si juvenis est imbecillus, aut si mulier, quæ non est gravida, valet parum, sanguis male mittitur: enim vis, si qua superaret, crepta hoc modo, emoritur.

At firmus puer, et robustus senex, et valens gravida mulier, curatur (in hoc modo) tuto. Tamen imperitus medieus potest falli maxime in his: quia fere minus roboris subest illis ætatibus; que est quoque opus prægnanti mulieri viribus post eurationem, non tantum ad se, sed etiam ad sustinendum partum. Antem quidquid exigit iutentiuem animi et prudentiam, non est ejiciendm; eum præcipua ars in hoc sit quæ non numeret annos, neque vidcat conceptionem solam, sed aestimet vires, et colligat ex eo, necne possit superesse quod sustineat vel puerum, vel senem, vel duo corpora simul in una muliere.

Etiam interest inter valens et obesum corpus; inter tempe et infirmum; sanguis abundant magis tenuioribus, caro magis plenioribus. Itaque illi sustinent detractionem ejusmodi facilius; que aliquis, si est nimium pinguis, celerius affligitur ea. Quæ

TRANSLATION.

are not to regard what the age may be; nor whether there be pregnancy, but the strength of the patient. Therefore if a young person be weak, or if a non-pregnant woman be in a languid state, the extraction of blood is improper: for the *vis vitæ*, if any were remaining, being thus exhausted, dics entirely.

While on the other hand a strong child, a robust old man, a vigorous pregnant female are treated in this manner with safety. Yet in these cases, an unskillful physician may be very much deceived, because, there is generally a proportionate depletion of the vital powers at those periods of life; and a pregnant female requires strength after parturition, not only for herself, but for the sustenance of her offspring. Therefore we are not to reject whatever requires intense application of the mind and prudence hastily: since the excellency of the art here, is, not in the enumeration of the patient's years, nor to regard conception alone, but (to form a correct) estimate of his physical powers, and to collect from thence, whether there be sufficient stamina over and above to support either a child, or an old man; or two bodies at the same time in one female.

There is a difference also between a strong and a fat body; between a spare and a weak: the blood is more abundant in thinner persons, flesh more in fuller habits. Therefore the former sustain depletion of this kind more easily, while he, who is

melius ex venis, quam ex ipsa specie aestimatur.

Neque solum hæc consideranda sunt, sed etiam morbi genus quod sit: utrum superans, an deficiens materia læscrit; corruptum corpus sit, an integrum. Nam si materia vel dcest, vel integra est, istud alicnum est: at si vel copia sui male habet, vel corrupta est, nullo modo melius sueurritur. Ergo vellemens febris, ubi rubet corpus, plenæque venæ tument, sanguinis detractionem requirit: item viscerum morbi, nervorumque resolutio, et rigor, et distentio: quidquid denique fauces difficultate spiritus strangulat; quidquid subito suppressit vocem; quisquis intolerabilis dolor est; et quacunque de causa ruptum aliquid intus atque collisum est: item malus corporis habitus, omnesque acuti morbi, qui modo, ut supra dixi, non infirmitate, sed onere noeunt.

Fieri tamen potest, ut morbus quidem id desideret, eorū autem vix pati posse videatur: sed si nullum tamen appareat aliud auxilium, periturusque sit qui laborat, nisi temeraria quoque via fuerit adjutus; in hoc statu boni medici est ostendere, quam nulla spes sit sine san-

ORDO.

ideo vis corporis aestinatur melius ex venis, quam ex specie.

Neque sunt hæc solum consideranda, sed etiam quid sit genus morbi: utrum superans materia læserit, an deficiens; (an) corpus sit corruptum, an integrum. Nam si materia vel dcest, vel est integra, istud est alienum: at si vel copia sui male habet, vel est corrupta, succurrirunt nullo modo melius. Ergo vellemens febris, ubi corpus rubet, que venæ plenæ tument, requirit detractionem sanguinis: item morbi viscerum, resolutio (paralysis) et rigor (tetanus,) et distentio nervorum (convulsio) denique, quidquid strangulat fauces difficultate spiritus; quidquid suppressit vocem subito; quisquis dolor est intolerabilis; et de quacunque causa aliquid est ruptum atque collisum intus; item malus habitus corporis, que omnes acuti morbi, qui, ut dixi supra, non nocent infirmitate, sed onere.

Tamen potest fieri, ut morbi quidem desideret id, autem corpus videatur posse vix pati: sed tamen si nullum auxilium appareat, que qui laborat sit periturus, nisi fuerit adjutus quoque temeraria via; in hoc statu est (officium) boni medici ostendere quam sit nulla spes sine

TRANSLATION.

very fat, is sooner affected by it. For this reason the strength of the body is estimated better by the state of the blood vessels, than from its appearance.

Nor are these the only things to be considered, but also the nature of the disease. Whether a redundancy or a deficiency of matter have been the offending cause; whether the body be corrupted or sound. For if the material be either deficient or sound, in this case blood-letting would be injurious: but if its own redundancy be prejudicial (to health), or vitiated, no other remedy will be more eligible. Therefore in a state of high fever, the body being red, the veins full and turgid, the extraction of blood is indicated: also diseases of the viscera, paralysis, tetanus, and convulsion; in short all diseases which affect the fauces, by difficult respiration; whatever suddenly suppresses the voice; whatever pain may be intolerable, such as internal ruptures and briniscs from whatever cause arising: also, a vitiated habit of body, and all acute diseases, which, as I have said above, are injurious, not by debility, but from excess.

Yet it may happen, that the disease itself may require this treatment, while the body seems scarcely able to support it: yet if no other remedy be apparent, and the patient be about to die, unless he shall have been relieved, even by a hazardous expedient: in this case it is the duty of a conscientious physician to intamate

guinis detractione, faterique, quantus in hac ipsa metus sit: et tum demum, si exigetur, sanguinem mittere.

D E Q U O D U B I T A R E I N E J U S M O D I R E N O N O P O R T E T : S A T I U S E S T E N I M A N C E P S A U X I L I U M E X P E R I R I , Q U A M N U L L U M . Idque maxime fieri debet, ubi nervi resoluti sunt; ubi subito aliquis obmutuit; ubi angina strangulatur; ubi prioris febris accessio pene confecit, paremque subsequi verisimile est, neque eam videntur sustinere ægri vires posse.

Cum sit autem minime crudo sanguis mittendus, tamen ne id quidem perpetuum est: neque enim semper concoctionem res exspectat. Ergo si ex superiori parte aliquis decidit, si contusus est, si ex aliquo subito casu sanguinem vomit; quamvis paulo ante sumpsit cibum; tamen protinus ei demenda materia est, ne, si subsederit, corpus affligat. Idemque etiam in aliis casibus repentinis, qui strangulabunt, dictum erit. At si morbi ratio patiatur, tum demum nulla cruditatis suspicione remanente id fiet. Ideoque ei rci videtur aptissimus adversæ valetudinis dies secundus, aut tertius. Sed ut aliquando etiam primo die sanguinem mittere necesse est, sic

ORDO.

detractione sanguinis, que fateri, quantus metus sit in hae ipsa: et tum demum, si exigetur mittere sanguinem.

De quo oportet non dubitare in re ejusmodi; enim est satius experiri aneps auxilium, quam nullum. Que id debet fieri maxime, ubi nervi sunt resoluti; ubi aliquis subito obmutuit; ubi strangulatur angina; ubi accessio prioris febris pene confecit, que est verisimile parem subscnii, neque vires ægri videntur posse sustinere eam.

Autem cum sanguis sit minime mittendus crudo, tamen ne quidem est id perpetuum: enim neque res exspectat concoctionem semper. Ergo si aliquis decidit ex superiori parte, si est contusus, si vomit sanguinem ex aliquo subito casu; quamvis sumpsit cibum paulo ante, tamen materia (sanguis) est demunda ei protinus, ne si subsederit, affligat corporis. Idemque erit dietum etiam in aliis repentinis casibus, qui strangulabunt. At si ratio morbi patiatur, tum demum, nulla suspicione cruditatis remanente, id fiet. Que ideo secundus, aut tertius dies adversæ valetudinis videtur aptissimus ei rei. Sed ut aliquando est necesse mittere sanguinem etiam primo die, sic

TRANSLATION.

that there is no hope without bleeding, and to admit how great the danger may be in this itself: and then to bleed if it shall be required.

In a case of such vital importance, there will be no time for hesitation, for it is preferable to try a doubtful remedy, than none. This ought to be practised particularly in paralysis; when the patient has become speechless; when he is (almost) strangulated with angina; when the paroxysm of a former fever had nearly carried him off, and another equally severe about to follow, although the strength of the patient seem incapable of sustaining it.

But although the extraction of blood ought not to be performed on a patient in a state of crudity, yet even that, is not without exception: for the case may not always admit of delay for concoction. Therefore if a person have been precipitated from some eminence, and bruised, if he vomit blood, caused by some sudden accident; although he may have taken food a little before, yet blood must be taken away immediately from him, lest, having subsided, it afflict the body. The same rule will apply also in all other sudden accidents, which (*are likely to*) produce strangulation. But if the nature of the disease admit of delay, then let it be done when a suspicion of crudity no longer remains: and for this reason, the second or third day of a malady seems the best adapted for that purpose. But as it is necessary sometimes to let blood on the first day, yet it is pernicious after the

numquam utile post diem quartum est, cum jam spatio ipso materia et exhausta est, et corpus corruptum: ut detractio imbecillum id facere possit, non possit integrum. Quod si vehemens febris urget, in ipso impetu ejus sanguinem mittere, hominem jugulare est.

Exspectanda ergo remissio est; si non decrescit, sed crescere desiit, neque speratur remissio, tum quoque, quamvis pejor, sola tamen occasio non omittenda est.

Fcre etiam ista medicina, ubi necessaria est, in biduum dividenda est: satius est enim, primum levare ægrum, deinde perpurgare, quam simul omni vi effusa fortasse præcipitare. Quod si in pure quoque aquaque, quæ inter cutem est, ita respondet, quanto magis necesse est in sanguine respondat? Mitti vero is debet, si totius corporis causa fit, ex brachio; si partis alicujus, ex ea ipsa parte, aut certe quam proxima: quia non ubique mitti potest, sed in temporibus, in brachiis, juxta talos.

Neque ignoro, quosdam dicere, quam longissime sanguinem inde, ubi laedit, esse mittendum: sic enim averti materiae cursum; at illo modo in idipsum,

ORDO.

est numquam utile post quartum diem, enī et materia est exhausta jam spatio ipso, et corruptum corpus, ut detractio possit facere id imbecillum, non possit integrum. Quod si vehemens febris urget, mittere sanguinem in impetu ipso ejus, est jugulare hominem.

Ergo remissio est exspectanda; sed si non decreaserit, desiit crescere, tum quoque, neque remissio speratur, tamen sola occasio non est omittenda, quamvis pejor.

Etiam ista medicina est fere necessaria, ubi est dividenda in biduum: enim est satius, primum levare ægrum, deinde perpurgare, quam fortasse simul præcipitare omni vi effusa. Quod si quoque ita respondet in pure que aqua, quæ est inter cutem, quanto magis est necesse respondeat in sanguine? Vero is debet mitti ex braehio, si causa fit totius corporis; si alienus partis, ex ea parte ipsa, aut ecrite quam proxima: quia non potest mitti ubique, sed in temporibus, in brachiis, juxta talos.

Neque ignoro, quosdam dieere, sanguinem esse mittendum quam longissime inde, ubi laedit: enim sie cursum materiae averti; at idipsum evocari in illo modo,

TRANSLATION.

fourth, since the material has either been exhausted by the time itself, or it has vitiated the body, so that extraction may produce debility, but cannot make it sound. But during the violence of a fever, to let blood then, in the acmè of its paroxysm, is deliberate homicide. Therefore a remission is to be waited for; if it do not remit, but have ceased to increase, and no remission to be expected; then although the circumstances be less favourable, yet the only chance is not to be omitted.

When this medicinal agent becomes necessary, it would be preferable, were it to be divided, generally, into the space of two days; for it is better at first to relieve the patient, and afterwards to purge him thoroughly, than to dissipate all his strength at once, perhaps to destroy him. Therefore if it succeed in the evacuation of pus from an abscess, or in paracentesis; how much more necessary is it when applied to the extraction of blood?

But if it be intended to relieve the whole body, in that case it ought to be taken from the arm; if for some local affection, it should be drawn from that part itself, or at least as near to it as possible; because it cannot be taken every where, but only in the temples, in the arms, and near the ankles. Neither am I ignorant, that some say it ought to be drawn as far as possible from the injured part; for by this plan the course of the blood being averted; whilst by that mode, it is directed

quod gravat evocari. Sed id falsum est: proximum enim locum primo exhaerit; ex ulterioribus autem eatenus sanguis sequitur, quatenus emittitur; ubi is suppressus est, quia non trahitur, ne venit quidem.

Videtur tamen usus ipse docuisse, si eaput fractum est, ex brachio potius sanguinem esse mittendum; si quod in humero vitium est, ex altero brachio: eredo, quia si quid parum eesserit, opportuniores eae partes injuriæ sunt, quæ jam male habent. Avertitur quoque interdum sanguis, ubi alia parte prorumpens, alia emittitur: desinit enim fluere qua nolumus, inde objectis quæ prohibeant, alio dato itinere.

Mittere autem sanguinem eum sit expeditissimum, usum habenti; tamen ignaro difficultimum est. Juneta enim est vena arteriis, his nervi: ita, si nervum scalpellus attingit, sequitur nervorum distentio, eaque hominem erudititer consumit. At arteria incisa neque coit, neque saneseit; interdum etiam, ut sanguis vehemente crumpat, efficit. Ipsius quoque venæ, si forte præeisa est, capita comprimuntur, neque sanguinem emittunt. At si timide scalpellus demittitur, summam eutem la-

ORDO.

quod gravat. Sed id est falsum: enim primo exhaustum proximum locum; autem sanguis sequitur ex ulterioribus eatenus, quatenus emittitur; ubi is est suppressus, quia non trahitur, quidem ne venit.

Videtur tamen usus ipse docuisse, si eaput est fractum, sanguinem esse mittendum potius ex brachio; si est quod vitium in humero, ex altero brachio: quia credo si quid eesserit parum, eae partes quæ jam habent male, sunt opportuniores ioxiriae. Quoque sanguis interdum avertitur, ubi prorumpens alia parte, emittitur alia: enim desinit fluere (iu ea parte) qua volvuntur, inde objectis quæ prohibeant, alio itinere dato.

Autem cum sit expeditissimum habenti usum mittere sanguinem; tamen est difficillimum ignaro. Enim vena est juncta arteriis, nervi his: ita, si scalpellus attingit nervum, distentio nervorum sequitur, que ea consumit hominem crudeliter. At incisa arteria neque coit, neque sanescit; interdum etiam efficit, ut sanguis erumpat vehementer. Quoque capita venæ ipsius, si forte est præeisa, comprimitur, neque emittunt sanguinem. At si scalpellus demittitur timide, lacerat suumam eutem, neque

TRANSLATION.

to that part which is affected. But that is false; for it first empties the nearest part of its blood; but that is immediately supplied from the more distant parts, as long as the evaenation is continued; when that is suppressed, it ceases, being no longer attracted to that part.

Yet practice itself seems to have taught us, that if the skull be fractured, blood ought to be taken rather from the arm; if there be any disease in the humerus, a vein is to be opened in the other arm: and I suppose, because, if any thing untoward shall have happened, those parts are more susceptible of injury, which are already diseased. Sometimes also an haemorrhage is averted, when bursting out in some part, by letting blood in another: for it ceases to flow in that part where we do not wish, means being opposed, (*styptics*); and another outlet being given.

But although venesection be very easy to a practised man, yet to the unskilful it is most difficult. For the vein being joined to the arteries, and the nerves to these; therefore if the lancet should touch the nerve, convulsions ensue, and that cruelly destroys the man. But a wounded artery neither unites, nor heals; sometimes it causes profuse haemorrhage. Also, if the vein itself happen to be divided, the extremities perchance being compressed, emit no blood. But if the lancet be thrust timidly, it lacerates the skin without opening the vein. Also the vein some-

cerat, neque venam incidit. Nonnumquam etiam ea latet, neque facile reperitur. Ita multæ res id difficile inscio faciunt, quod perito facillimum est.

Incidenda autem ad medium vena est: ex qua cum sanguis erumpit, colorem ejus habitumque oportet attendere. Nam si is crassus et niger est, vitiosus est; ideoque utiliter effunditur: si rubet et pellucet, integer est; eaque missio sanguinis adeo non prodest, ut etiam noceat; protinusque is supprimendus est. Sed id evenire non potest sub eo medico, qui scit ex quali corpore sanguis mittendus sit. Illud magis fieri solet, ut æque niger assiduc primo die profluat: quod quamvis ita est, tamen si jam satis fluxit, supprimendus est; semperque ante finis faciendus est, quam anima deficiat. Deligandumque brachium superimposito expresso ex aqua frigida penicillo: et postero die adverso medio digito vena ferienda, ut recens coitus ejus resolvatur, iterumque sanguinem fundat. Sive autem primo, sive secundo die sanguis, qui crassus et niger initio fluxerat, et rubere, et pellucere cœpit, satis materiae detractum est, atque quod superstest, sincerum est: ideoque protinus brachium deligandum, habendumque ita

Antem sive sanguis qui fluxerat niger et crassus initio, cœpit et rubere, et pellucere primo, sive secundo die, satis materiae est adjectum, atque quod superest, est sincerum: que ideo brachium est deligandum protius, que habendum ita,

TRANSLATION.

times lies hidden, neither is it easily discovered. Thus many things concur to render this a difficult operation to the tyro, which is very easy to a scientific man.

The vein is to be opened at the middle: and as the blood flows from it, (*the surgeon*) ought to attend to its colour and consistence. For if it be thick and black, it is impure: and in that case profitably removed: if it be red and clear, it is sound; and that bleeding is so far from being salutary, that it may even be injurious; and it must be stopped immediately. But that cannot happen to the physician who knows, from what state of body blood is to be taken. It frequently happens, that the blood flows uniformly black on the first day: which although this be so, it must be stopped, when enough has been obtained; and the operation ought always to terminate before synope. The arm then is to be bound up with a pledget expressed out of cold water laid over it: and on the following day the vein is to be struck with the middle finger, that the recent union may be resolved, and bleed afresh. But blood, whether drawn on the first or second day, which, at first, is thick and black, begins to look red and pellucid, (shows) that a sufficieney has been taken away, and what remains is pure: therefore the arm is to be bound

OF CUPPING.

Now there are two kinds of CUPPING INSTRUMENTS; one made of brass, the other of horn. The brazen is open at one end, and close at the other; that of horn is likewise open at one end, and a small foramen in the other. Burning lint is thrown into the brass one, and then its mouth applied to the body, and there pressed until it adhere.

The horn one is applied to the body by itself; and afterwards the air being exhausted by the mouth at that part where the small opening is, and the small orifice immediately closed with wax, it adheres as well as the other. Each of these may be made very properly not only of these materials, but of any other. If nothing else can be had, a small ewp, or a narrow-mouthed pipkin will answer the purpose. When it adheres, if the skin have been scarified previously with a lancet,

nem extrahit ; si integra est, spiritum. Ergo ubi materia, quæ intus est, lædit, illo modo ; ubi inflatio, hoc imponi solet.

Usus autem cucurbitulæ præcipuus est, ubi non in toto corpore, sed in parte aliqua vitium est, quam exhaudiri ad confirmandam valetudinem satis est. Idque ipsum testimonium est, etiam scalpello sanguinem, ubi membro succurritur, ab ea potissimum parte, quæ jam læsa est, esse mittendum, quod uemo cueurbitulam diversæ parti imponit, nisi cum profusionem sanguinis eo avertit ; sed ei ipsi, quæ dolet, quæque liberanda est.

Opus etiam esse cucurbitula potest in morbis longis, quamvis et iis jam spatium aliquod accessit ; sive corrupta materia, sive spiritu male habente : in aequali quoque quibusdam, si et levare corpus debet, et ex vena sanguinem mitti vires non patiuntur. Idque auxilium ut minus vehemens, ita magis tutum ; neque umquam perieulosum est, etiamsi in medio febris impetu, etiamsi in cruditate adhibetur. Ideoque ubi sanguinem mitti opus est, si ineisa vena præceps periculum est, aut si in parte corporis etiam vitium est, hue potius configiendum

ORDO.

extrahit sanguinem ; si est integra, spiritum. Ergo ubi materia, quæ est intus, lædit, solet imponi illo modo ; ubi (est) inflatio hoc (modo).

Autem præcipuus usus encurbitula est, ubi vitium non est in toto corpore, sed in aliqua parte, quam exhaudiri est satis ad confirmandam valetudinem. Que id ipsum est testimonium, sanguinem esse mittendum, etiam scalpello, ubi succurritur membro, potissimum ab ea parte quæ est jam læsa, quod nemo imponit cucurbitulam diversæ parti, nisi eum avertit profusionem sanguinis eo; sed ei ipsi, quæ dolet, que quæ est liberanda.

Etiam potest esse opus encurbitula in longis, morbis et quamvis jam aliquod spatium accessit iis; sive habente corrupta materia, sive male spiritu: quoque in quibusdam acutis, si et corpus debet levare, et vires noui patiuntur sanguinem mitti ex vena. Que ut id auxilium (est) minus vehemens, ita (est) magis tutum; neque est umquam periculosum, etiamsi adhibetur in medio impetu febris, etiamsi in cruditate. Que ideo ubi est opus sanguinem mitti, si est præceps periculum vena ineisa, aut etiam si est vitium in parte corporis, est potius configiendum hoc : tamen

TRANSLATION.

the blood exudes, if the skin be entire, only air. Therefore when the mass of blood is vitiated, it is usual to apply the cup by the former method, when only inflation, by the latter.

But the principal use of the cupping instrument is, when the malady is not general, but local, which being exhausted, is sufficient to restore that part to health: which is of itself a proof that blood ought to be drawn even with the lancet in order to relieve a limb, and especially from the part already injured: because no one applies it to a different part, unless to avert the flux of blood thither, but to the part itself which is affected, and which he ought to relieve.

The cupping apparatus may be usefully applied in chronic diseases, although they may have existed for some considerable time; whether the blood be vitiated or flatulent: also in some acute diseases, if the body ought to be relieved, yet the strength seems insufficient to support venesection: and as this remedy is less violent, so it is more safe; nor is it ever dangerous, although it be applied in the height of a febrile paroxysm, or even in crudity. Therefore when there is a necessity for the abstraction of blood, if venesection be attended with much danger, or if the disease be confined to a part, then we must have recourse to this (*instru-*

CHAP. XII.

OF PURGING.

THE ancients administered various cathartic medicines, and repeated ENEMAS in almost all diseases: and they gave either black hellebore, or polypodium (*malefern*), or the dross (oxide) of copper, which the Greeks call *lepidæ chalkou*; or the milk of the marine lettuce (spurge), one drop of which taken on bread, purges copiously; or ass's milk, or that of the cow, or goats, to which they added a little salt, and boiled it down; having abstracted the curds, they compelled their patients to drink the whey.

But medicine is generally offensive to the stomach; and if the bowels be violently purged, or glystered too often, it debilitates the patient. Therefore, in sickness, medicine ought never to be administered with that view, unless the disease be

datur, nisi ubi is morbus sine febre est; ut eum veratrum nigrum aut atra bile vexatis, aut eum tristitia insanientibus, aut iis, quorum nervi parte aliqua resoluti sunt, datur. At ubi febres sunt, satius est ejus rei causa cibos potionesque assumere, qui simul et alant, et ventrem molliant. Suntque valetudinis genera, quibus ex lacte purgatio convenit.

2. Plerumque vero alvus potius duocenda est; quod ab Asclepiade quoque sic temperatum, ut tamen servatum sit, video plerumque saeculo nostro praeteriri. Est autem ea moderatio, quam is secutus videtur, aptissima: ut neque saepe ea medicina tentetur, et tamen semel, vel sumnum bis, non omittatur, si caput grave est; si oculi caligant; si morbus majoris intestini est, quod Graeci κόλον nominant; si in imo ventre, aut in coxa dolores sunt; si in stomachum quedam biliosa concurrunt, vel etiam pituita eo se, humorve aliquis aquae similis confert; si spiritus difficultius redditur; si nihil per se venter excernit; utique, si juxta quoque stereus est, et intus remanet; aut si stereoris odorem nihil dejiciens æger ex spiritu suo sentit; aut si corruptum est, quod

without fever; as when black hellebore is given to those affected with atrabilis, or melancholy madness, or to those who may have paralysis in some part. But where there are fevers, it is preferable to take such foods and drinks of that kind, which will at the same time nourish the patient and mollify the bowels. There are some maladies, to which the milk purgatives are adapted.

2. But generally, the bowels are preferably opened by INJECTIONS; a mode in some degree reprehended by Asclepiades, although admitted by him, yet I see it has fallen into disuse in our age. But that restriction which he seems to have followed, is very proper; that this remedy should neither be too often repeated, nor entirely omitted, but used once, or at most twice, if there be heaviness of the head, or dimness of the eyes; if there be disease of the greater intestine which the Greeks call colon; if there be pain in the pubic region, or in the hip; if there be any bilious accumulation in the stomach, or even phlegm, or some aqueous fluid collected there; if respiration be performed with difficulty; if the bowels do not act spontaneously; if there be sputa retained within the rectum; or if the patient feel a stridoraneous factor arising from his own breath, whilst his bowels are constipated; or if the excrements be foul; or if the first abstinence have not

exeernitur; aut si prima inedia febrem non sustulit; aut si sanguinem mitti, cum opus sit, vires non patiuntur, tempusve ejus rei præterit; aut si multum ante morbum aliquis potavit; aut si is, quæ sœpe vel sponte, vel easu purgatus est, subito habet alvum suppressam.

Servanda vero illa sunt: ne ante diem tertium dueatur; ne ulla cruditate substante; ne in corpore infirmo, diuque in adversa valetudine exhausto; neve in eo, eui satis alvus quotidie reddit, quive eam liquidam habet; neve in ipso accessionis impetu, quia, quod tum infusum est, alvo continetur, regestumque in caput, multo gravius periculum efficit. Pridie vero abstineri debet æger, ut aptus tali eurationi sit: eodem die ante aliquot horas aquam ealidam bibere, ut superiores ejus partes madeseant. Tum immittenda in alvum est, si levi medieina contenti sumus, pura aqua; si paulo valentiori, mulsa; si leni, ea in qua fœnum Græcum, vel ptisana, vel malva decocta sit; si reprimendi eausa, ex verbenis. Aeris autem est marina aqua, vel alia sale adjeeto: atque utraque decocta eommodior est.

removed a fever; or if the strength be inadequate to sustain the loss of blood, when necessary, or the time for this operation having passed by; or if a patient have drank to excess antecedently to the disease; or if he, who has often been purged naturally, or accidentally, have his bowels suddenly suppressed.

But these precepts are to be observed: that an injection is not to be used before the third day; lest there be indigestion existing; not in a debilitated frame, and exhausted by protracted illness; nor to him whose bowels act daily, in sufficient quantity, nor whose motions are liquid; nor in the acme of a febrile exacerbation, because that which is then injected, is retained in the bowels, and being thrown back upon the head, produces very serious danger. But the patient ought to abstain one day previously that he may be prepared for such a remedy: to drink warm water some hours before on the same day, that the superior parts may be moistened. Then pure water is to be injected into the bowels, if we be content with a gentle medicine; if a little more powerful, hydromel (20); if it be desirable to have a lenient effect, then a decoction of fœnugreek, or ptisan (21), or mallows; if an astringent, then with vervains. But sea-water, or any other with the addition of salt, is aerid; and both are better when boiled. It may be made more stimu-

Acrior fit, adjecto vel oleo, vel nitro, vel melle: quoque acrior est, eo plus extrahit, sed minus facile sustinetur. Idque quod infunditur, neque frigidum esse oportet, neque calidum; ne alterutro modo laedat.

Cum infusum est, quantum fieri potest, continere se in lectulo debet æger, nec primæ cupiditati dejectionis protinus cedere: ubi necesse est, tum demum desidere. Fereque eo modo dempta materia, superioribus partibus levatis, morbum ipsum mollit. Cum vero, quoties res coegit, desidendo aliquis se exhausit, paulisper debet conquiescere; et, ne vires deficiant, utique eo die cibum assumere: qui plenior, an exiguum sit dandus, ex ratione ejus accessionis, quæ exspectabitur, aut in metu non erit, æstimari oportebit.

TRANSLATION.

laut, by adding either oil, nitre, or honey: and the more acrid it is, the more it evacuates, but is less easily supported. Enemata ought neither to be cold nor hot, lest they may offend either way.

When injected, the patient ought to confine himself as much as possible in bed, neither ought he to yield immediately to the first inclination of a motion: when at length pressed by necessity, let him deject. The matter carried off by this mode often alleviates the disease itself, by relieving the superior parts. But when a patient has exhausted himself by going to stool as often as he has been compelled, he ought to rest a little while, and, lest his strength may fail, he should take some food, especially on that day: which may be given more, or less, according to the nature of the expected paroxysm, or if there shall be none impending.

qui vexantur horrore et tremore ante febres ; omnibus, qui laborant cholera ; etiam omnibus insanientibus cum quadam hilaritate ; et quoque est necessarius oppressis comitali morbo. Sed si morbus est aetus, sicut in cholera ; si est febris, ut inter horrores, non est opus asperioribus medicamentis ; quoque sicut est dictum supra in dejectionibus : que satis est ea causa, vomitus sumi, esse que proposui sumenda quoque sanis. At ubi longi que valentes morbi sunt sine febre, ut comitalis aut insania, est quoque utendum albo veratro. Neque id datur recte hieme, neque aestate ; optime vere ; tolerabiliter autumno. Quisquis erat datus, debet agere id ante, ut corpus sit accepturi humidius. Oportet scire illud, omne medicamentum ejusmodi ; quod datur potui, non semper prodesse ægris, semper nocere sanis.

TRANSLATION.

to all those who are affected with shivering and trembling before fevers ; to all those who are subject to cholera ; and all those who are insane accompanied with high excitement : and also those who are affected with epilepsy. But if the disease be aente, as in cholera ; or if there be fever, while there are shiverings, the more violent medicines are unnecessary, as it has been observed above in purgings ; and it will be sufficient to take those things for a vomit, which I have proposed to be taken by persons in health.

But when diseases have become chronic, rebellious, and unattended with fever, such as epilepsy, or insanity, we must administer even white hellebore : but indeed this medicine would be improper either in winter or in summer ; it is given with most advantage in spring : tolerably in autumn. Whoever is about to administer it, ought first to prepare his patient, so that his body may be very moist. It is incumbent to know that every medicine of this kind, which is given by way of potion, is not always salutary to the sick, but to the healthy uniformly pernicious.

CAP. XIV.

DE FRICTIONE.

DE frictione vero adeo multa Aselepiades, tamquam inventor ejus, posuit in eo volumine, quod eommunium auxiliorum inscripsit, ut, eum trium tantum faceret mentionem, hujus et aquæ et gestationis, tamen maximam partem in hae econsumperit. Oportet autem neque reentiores viros in iis fraudare, quæ vel repererunt, vel reete seeuti sunt; et tamen ea, quæ apud antiquiores aliquos posita sunt, auctoribus suis reddere.

Neque dubitari potest, quin latius quidem, et dilueidius, ubi et quomodo frictione utendum esset, Aselepiades præepperit; nihil tamen repererit, quod non a vetustissimo auctore Hippocrate paucis verbis comprehendens sit: qui dixit, frictione, si vehemens sit, durari corpus; si lenis, molliri; si multa, minui; si modica, impleri.

Sequitur ergo, ut tum utendum sit, eum aut adstringendum corpus sit, quod hebes est; aut molliendum, quod

DE FRICTIONE.

VERO Asclepiades, tamquam inventor ejus, posuit adeo multa de frictione in eo volumine eommunium auxiliorum, quod inscripsit, nt, cum faceret mentionem trium tantum, hujus et aquæ et gestationis, tamen econsumperit maximam partem in hac. Autem neque oportet fraudare reentiores viros in iis, qnæ vel repererunt, vel sunt securi recte; et tamen reddere ea, quæ sunt posita apud aliquos antiquiores, suis auctoribus.

Neque potest dubitare, quin Asclepiades præceperit quidem latius, que dilueidius; ubi, et quomodo esset utendum frictione, tamen repererit nihil quod non sit comprehendens paucis verbis a vetustissimo auctore Hippocrates: qui dixit, corpus durari frictione, si sit vehemens; molliri si lenis; minui si multa, impleri si modica.

Ergo sequitur ut sit utendum autem corpus quod est hebes sit adstringendum, aut quod induruit molliendum, aut digerendum

TRANSLATION.

CHAP. XIV.

OF FRICTION.

ASCLEPIADES has said so much concerning FRICTION in that volume, which he has entitled "GENERAL REMEDIES," as if the inventor of it, that although he only mentioned three, namely this, water, and gestation, yet he has employed the greater part of his treatise upon the first. Now as it is but a duty incumbent upon us, not to rob the moderns of those things which they have discovered, or judiciously followed, so it is but an act of justice to render up those inventions which have been described by some of the ancients to their proper authors.

Nor can it be doubted, that Aselepiades has explained more fully, and more clearly, when, and in what manner we ought to use friction: but he has discovered nothing which has not been comprehended by the most ancient author, Hippocrates, in a few words: who has said, that the body may be hardened by violent friction; if gentle, it softens it; if it be much, it extenuates; if moderate, it increases; therefore it follows, that it may be used to brace up a sluggish

induruit; aut digerendum in eo, quod copia noect; aut alendum id, quod tenue et infirmum est. Quas tamen species si quis curiosius aestimat (quod jam ad medicum non pertinet) facile intelliget, omnes ex una causa pendere, quae demit. Nam et adstringitur aliquid, eo dempto, quod interpositum, ut id laxaretur, effecerat; et mollitur, eo detracto, quod duritiem crebat; et impletur, non ipsa fritione, sed eo cibo, qui postea usque ad cutem, digestione quadam relaxatam, penetrat.

Diversarum vero rerum in modo causa est. Inter unctionem autem et frictionem multum intercest. Ungi enim, leniterque pertractari corpus, etiam in acutis et recentibus morbis oportet; in remissione tamen, et ante eibum: longa vero fritione uti, neque in acutis morbis, neque in crescentibus convcnit; præterquam cum phrenctieis somnus caueritur. Amat autem hoc auxilium valetudo longa, et jam a primo impetu inclinata.

Neque ignoro, quosdam dicere, omne auxilium necessarium esse in crescentibus morbis, non cum jam per se finiuntur. Quod non ita se habet. Potest

ORDO.

in eo quod copia nocet. Ant id alendum quod est tenui et infirmum. Tamen quas species si quis aestimat curiosius, (quod jam non pertinet ad medicum,) intellegit facile, omnes pendere ex una causa, quae demit. Nam et alignid adstringitur, eo dempto, quod interpositum, effecerat ut id laxaretur; et mollitur, eo detracto, quod crebat duritiem, et non impletur, fritione ipsa, sed eo cibo qui postea penetrat usque ad cutem, relaxatum quadam digestione.

Vero causa diversarum rerum est in modo. Autem interest multum inter unctionem et fritionem. Enim oportet corpus ungi, que pertractari leniter, etiam in acutis et recentibus morbis, tamen in remissione, et ante eibum. Vero, neque convenit nisi longa fritione, in acutis neque in crescentibus morbis; præterquam cum somnus caueritur phreneticis ea. Autem longa valetudo et jam inclinata a primo impetu, amat hoc auxilium.

Neque ignoro quosdam dicere, omne auxilium esse necessarium in crescentibus morbis, non cum finiuntur jam per se. Quod non habet se ita. Enim morbus, qui

TRANSLATION.

body; or to soften that which has become indurated; or to discuss superfluity in that body where it is noxious; or to improve that which is delicate and weak.

Now if a person examine more carefully those different species, which is not the province of a physician at present, he will easily comprehend, that all those effects depend on one cause, that is, depletion. For a body becomes braced, by the removal of that, whose interposition, had caused it to be relaxed; and that is softened, by removing the cause which produced the hardness; and that body is filled, not by friction itself, but by that nourishment, which afterwards pervades (*all parts*) as far as the surface, which become relaxed by some digestion. But the cause of these different (and opposite) effects, is in the *modus agendi*.

But there is much difference between **UNCTION** and **FRITION**. For it is necessary to anoint and rub the body gently, even in acute and recent diseases; but this is to be done in the remission and before food: yet, to use long friction, in either acute or increasing diseases, would be improper: except when we employ it to procure sleep on a phrenetic patient. But a chronic disease, and one just inclining to convalescence after the first attack is benefited by this remedy. Nor am I ignorant, that some physicians say that every remedy becomes necessary in progressing diseases, not when they are retrograding spontaneously. But this is

enim morbus, etiam qui per se finem habiturus est, citius tamen adhibito auxilio tolli: quod duabus de causis necessarium est; et ut quam primum bona valetudo contingat; et ne morbus, qui remanet, iterum, quamvis levi de causa, exasperetur. Potest morbus minus gravis esse, quam fuerit, neque ideo tamen solvi, sed reliquis quibusdam inhærere, quas admotum aliquod auxilium discutit.

Sed ut, levata quoque adversa valetudine, recte frictio adhibetur; sic numquam adhibenda est fæbre increscente: verum, si fieri poterit, eum ex toto corpus ea vacabit; sin minus, certe cum ea remiserit. Eadem autem modo in totis corporibus esse debet, ut eum infirmus aliquis implendus; modo in partibus, aut quia ipsius ejus membra imbecillitas id requirit, aut quia alterius. Nam et capitis longos dolores ipsius frictio levat; non in impetu tamen doloris: et membrum aliquod resolutum ipsius frictione confirmatur. Longe tamen saepius aliud perficandum est, eum aliud dolet; maximeque cum a summis, aut a mediis partibus corporis evocare materiam volumus; ideoque extremas partes per-

ORDO.

est habiturus finem etiam per se, tamen potest tolli citius, auxilio adhibito, quod est necessarium de duabus cansis; et ut bona valetudo contingat quam primum; et ne morbus qui remanet, exasperetur iterum quamvis de levi causa. Morbus potest esse minus gravis, quam fuerit, neque tamen ideo solvi, sed inhærere quibusdam reliquis, quas aliquod auxilium admotum dissentit.

Sed ut, frictio adhibetur recte, quoque levata adversa valetudine recte, sic est nunquam adhibenda febre inercente: verum, si poterit fieri cum corpus vacabit ea ex toto; sin minus certe cum ea remiserit. Autem eadem debet esse modo in totis corporibus, ut cum aliquis infirmus (est) implendus; modo in partibus, aut quia imbecillitas ejus membra ipsius aut quia alterius requirit id. Nam et frictio levat longos dolores capitis ipsius, tamen non in impetu doloris, et aliquod resolutum membrum confirmatur frictione ipsius. Tamen longe saepius aliud est perficandum, quem aliud dolet: que maxime quem volumus evocare materiam a summis aut a mediis partibus corporis; que ideo perficamus extremas partes. Neque sunt

TRANSLATION.

not so: for a disease which is about to terminate of itself, may still be accelerated by the application of a remedy, which is necessary for two reasons; both that health may be restored as soon as possible; and lest the disease, which still remains, may be exasperated again, although from a slight cause. For a disease may be less violent than it has been, yet not so far removed, but remains lurking in the system, which some applicable remedy might discuss.

But as friction is very properly exhibited for the relief of convalescent persons; it never ought to be employed in progressing fevers: but if it can be done, when the body enjoys entire freedom from it; if otherwise, certainly, when it has remitted. The same ought to be done over the whole body, as for instance, when we wish to improve the habit of some infirm person; sometimes partial, either because the weakness of that limb itself, or of some other may require it. For friction mitigates chronic pains of the head itself, but not to be applied in the paroxysms of pain; and sometimes the strength of a paralysed limb is restored by rubbing of it. Yet when one limb is to be rubbed for the relief of another, it must be done often: and most especially when we wish to effect a revulsion of the matter from the upper or middle parts of the body; and for this intention we rub the extremities.

fricamus. Neque audiendi sunt, qui numero finiunt, quoties aliquis perfri-
candus sit. Id enim ex viribus homi-
nis collendum est: et si is perinfirmitas
est, potest satis esse quinquagies; si
robustior, potest ducenties esse facien-
dum; inter utrumque deinde, prout
vires sunt. Quo fit, ut etiam minus

TRANSLATION.

Nor are those persons to be regarded, who define the number of times a patient ought to be rubbed: for that is to be determined by the man's strength; so, that fifty times may be sufficient, if the person be very infirm; if more robust, it may be done two-hundred times: and so on, proportioned to the strength of each. Which must be done, so, that the motions of the hands be less rapid on a female, than on a man; less frequent on a child, or an old person, than on a young man. Finally, if certain limbs are to be rubbed, they require much and powerful friction: for the whole body cannot be debilitated rapidly by a part, and there is a necessity for dissipating as much as possible of the matter, whether we believe that limb itself, or another by this. But when general debility of the system requires the employment of this treatment, it ought to be of shorter duration, and more gentle in application; so that it may only soften the surface of the skin, and render it more capacious for the reception of new material formed from fresh nourishment. I have stated above, that the patient is in a bad way when the surface of his body is cold, while internally he is hot and thirsty. But even then, the only safeguard is in friction, which, if it have promoted a warmth on the skin, it may facilitate the employment of other means.

CAP. XV.

DE GESTATIONE.

GESTATIO quoque longis et jam inelinatiis morbis aptissima est: utilisque est et iis corporibus, quæ jam ex toto febre earent; sed adhuc exerceri per se non possunt; et iis, quibus lentæ morborum reliquæ remanent, neque aliter eliduntur. Aselepiades etiam in reeenti vehementique, præeipueque ardente febre, ad discentiendam eam, gestatione dixit utendum: sed id perieulose fit; meliusque quiete ejusmodi impetus sustinetur. Si quis tamen experiri volet, sic experiatur, si lingua non erit aspera, si nullus tumor, nulla durities, nullus dolor viseeribus, aut capiti, aut præcordiis suberit. Et ex toto numquam gestari corpus dolens debet, sive id in toto, sive in parte est; nisi tamen solis nervis dolentibus; neque umquam inerescente febre, sed in remissione ejus.

Genera autem gestationis plura sunt; quæ adhibenda sunt et pro viribus eu-jusque, et pro opibus; ne aut imbecillum hominem nimis digerant, aut hu-

DE GESTATIONE.

GESTATIO quoque est aptissima longis morbis et jam inelinatiis: que est utilis et in iis corporibus quæ jam earent febre ex toto sed adhuc non possunt exerceri per se; et iis quibus lentæ reliquæ morborum remanent, neque eliduntur aliter. Aselepiades dixit utendum gestatione, etiam in recenti que vehementi, que præcipue ardente febre, ad discentiendam eam; sed id fit periculose; que impetus ejusmodi sustinetur melius quiete. Tamen siquis volet experiri, experiatur sic, si lingua non erit aspera, si nullus tumor, nullo durities, nullus dolor suberit viseeribus, aut capiti, aut præcordiis. Et ex toto corpus dolens, nunquam debet gestari, sive id est in toto, sive in parte. Nisi tamen nervis solis dolentibus: neque umquam, febre inerescente, sed in remissione ejus.

Autem sunt plura genera gestationis; quæ sunt adhibenda, et pro viribus et opibus eu-jusque; ne digerant imbecillum hominem nimis, aut ne desint

TRANSLATION.

CHAP. XV.

OF GESTATION.

GESTATION also is well adapted to chronic and regressing diseases: and it is also useful to those who are entirely free from fever, but are unable to be exercised by their own efforts; and to those in whom the lingering sequelæ of diseases still remain, nor can they be excoriated otherwise. Aselepiades said that gestation is to be used even in a recent and violent fever; and especially in an ardent one, in order to shake it off: but that is attended with danger, and an impetus of that disease is better sustained by rest. Yet if any one wish to try it, let him do it when the tongue is not rough, when there is no swelling, no induration, no pain, either in the viseera, the head, or præcordia. Henee, a body in pain ought never to be carried, whether it be in the whole, or in a part, unless the nerves alone be in pain: nor in the increase of a fever, but in the remission of it.

There are many kinds of gestation: which are to be employed both according to the strength and the resources of each individual; lest they over-exhaust the weak

mili desint. Lenissima est navi, vel in portu, vel in flumine; vehementior vel in alto mari nave, vel leetica; etiamnum acrior vehiculo. Atque haec ipsa et intendi et leniri possunt. Si nihil horum est, suspendi leetus debet, et moveri: si ne id quidem est, at certe uni pedi subjiciendum fulmentum est, atque ita leetus hue et illue manu impellendus.

Et levia quidem genera exercitatio-
nis infirmis convenient: valentiora
vero iis, qui jam pluribus diebus febre
liberati sunt; aut iis, qui gravium
morborum initia sie sentiunt, ut ad-

TRANSLATION.

man, nor be beyond the reach of the poor man. The most gentle gestation, is that of a ship, either in a harbour or in a river; the more violent is on the high sea, or in a suspension-couch; more violent still is that of a carriage. Indeed each of these may be rendered more or less gentle. If there be none of these things within a man's reach, a bed ought to be suspended, and agitated from side to side, if there be not even that, a prop is to be put under one foot (22), and by this fulcrum, the bed is to be propelled backwards and forwards by the hand.

Indeed the lighter kinds of exercise are adapted to the infirm: but more vehement to those who have already been freed from fever for several days; or to those who feel the first indications of severe diseases, although they may be as yet free from fever, (which happens both in consumption, in complaints of the stomach, in drop-sies, and sometimes in jaundice;) or when some maladies, such as epilepsy (23) or insanity, although they remain for a long time without fever. In which affections, those kinds of exercises are also necessary, which we have comprehended in that place, where we have prescribed rules for the management and conduct of healthy, but delicate persons.

CAP. XVI.

DE ABSTINENTIA.

ABSTINENTIÆ vero duo genera sunt : alterum, ubi nihil assumit æger ; alterum, ubi non nisi quod oportet. Initia morborum primum famem, sicutimque desiderant : ipsi deinde morbi, moderationem, ut neque aliud quam expedit, neque ejus ipsius nimium sumatur. Neque enim convenit juxta inediā protinus satietatem esse. Quod si sanis quoque corporibus inutile est, ubi aliqua necessitas famem fecit ; quanto inutilius est in corpore etiam ægro ? Neque illa res magis adjuvat laborantem, quam tempestiva abstinentia.

Intemperantes homines apud nos, ipsi cibi tempora curantibus dant. Rursus alii, tempora medicis pro dono remittunt, sibi ipsis modum vindicant. Liberaliter agere se credunt, qui cetera illorum arbitrio relinquunt, in genere

CHAP. XVI.

OF ABSTINENCE.

Now there are two kinds of **ABSTINENCE**; one when the patient takes nothing; another when he only takes what is barely necessary for him. First, the commencement of diseases requires hunger and thirst as an indispensable prerequisite: afterwards the diseases themselves require *dietetic* regulation, so that nothing but what is proper may be taken, nor too much of that itself. For it is not fit that satiety, should be immediately followed by hunger. But if it prove hurtful even to healthy persons, when by some necessity hunger has become expedient; how much more hurtful is it in a body already diseased? Nor can any thing alleviate the sick more than seasonable abstinence.

Intemperate men among us, prescribe for themselves the times of eating, but leave the quantity (24) to their attendants. Others again surrender the times to the discretion of the physicians for a fee, but reserve to themselves the privilege of determining the quantity. There are some who imagine themselves to act liberally, who relinquish every thing else to the judgement of their physicians, but are at liberty to choose the kind of food, as if it were asked—*What is the extent of a physician's*

cibi liberi sunt ; quasi quæratur, quid medieo lieeat, nou quid ægro salutare sit. Cui vehementer noeet, quoties in ejus, quod assumitur, vel tempore, vel modo, vel genere preeatur.

TRANSLATION.

CHAP. XVII.

OF PERSPIRATION.

Now sweating is elicited in two ways, either by a dry heat, or by a bath. Dry heat is produced by hot sand, the Laeonium, (25) and Clibanum, and some natural sweating places where the hot vapour exhaled from the earth is inclosed by a building, such as we have in the Myrtle-groves above Baiæ (26). Besides these, it is also excited by the sun and exercise : and these last kinds are useful when the vitiated humour within offends, and must be dispersed. Also some complaints of the nerves are treated best in this manner. But the other methods are best adapted for the weak : the sun and exercise alone for the more robust ; who, being free from fever, yet they are held under the influence of incipient diseases, or

tenantur. Cavendum autem est, ne quid horum vel in febre, vel in cruditate tentetur.

At balnei duplex usus est. Nam modo, discussis febribus, initium cibi plenioris, vinique firmioris, valetudini facit; modo febrem ipsam tollit. Fereque adhibetur, ubi summam cutem relaxari, evocarique corruptum humorem, et habitum corporis mutari expedit. Antiqui timidius eo utebantur: Asclepiades audacius. Neque terrere autem ea res, si tempestiva est, debet: ante tempus, nocet. Quisquis febre liberatus est, simulatque ea uno die non accessit, eo qui proximus est, post tempus accessionis, tuto lavari potest. At si circuitum habere ea febris solita est, sic ut tertio, quartove die revertatur, quandocumque non accessit, balneum tutum est.

Manentibus vero adhuc febribus, si haec sunt lentae, lenesque jamdiu male habent, recte medicina ista tentatur: cum eo tamen, ne praecordia dura sint, neve ea tumeant, neve lingua aspera sit, neve aut in medio corpore, aut in capite dolor ullus sit, neve tum febris increscat. Et in iis quidem febribus, quae

ORDO.

Vero febribus adhuc manentibus, si haec sunt leutea que lenes, habent male jam diu, ista medicina tentatur recte: tameu ne praecordia sint dura cum eo, neve ea tumeant, neve lingua sit aspera, neve sit ullus dolor, aut in medio corpore aut in capite, neve tum febris increscat. Et quidem in iis febribus quae habent certum

TRANSLATION.

even in severe diseases (27). But we must be guarded against trying any of these, either in fever or in crudity.

But the use of the bath is twofold. For sometimes, the fever being removed, it prepares the patient for a fuller diet, and stronger wine for the convalescent: sometimes it even carries off a fever itself. It is employed generally when it is expedient to relax the surface of the skin, to excoriate the corrupt and peccant humour, and a *bad* habit of body to be changed. The ancients used it with much timidity: Asclepiades more fearlessly. But it ought not to alarm any one, if it be employed seasonably; it is injurious when prematurely applied. If a person have been relieved of a fever, and experience no accession for one entire day, on the succeeding day he may bathe with safety, after the usual time of the accession. But if that fever have been accustomed to run a circuitous course, making a periodical return on the third, or fourth day, if that be passed over without an accession; the bath is safe.

But during the continuance of fever, if these be slow, and there be chronic disease of the spleen, this remedy may be rightly employed, but upon this condition, that the praecordia be not hard, or swollen, or the tongue rough, and that there be no pain either in the trunk of the body, or the head, and that the fever be not then progressing. Indeed in those fevers which have a certain round, there are

certum circuitum habent, duo balnei tempora sunt; alterum, ante horrorem; alterum, febre finita: in iis vero, qui lentis febriulis diu detinentur, cum aut ex toto recessit accessio; aut, si id non solet, certe lenita est, jamque corpus tam integrum est, quam maxime esse in eo genere valetudinis solet.

Imbecillus homo, iturus in balneum, vitare debet, ne ante frigus aliquod experietur: ubi in balneum venit, paulisper resistere, experiri, num tempora adstringantur, et an sudor aliquis oriatur: illud si incidit, hoc non secutum est, inutile eo dic balneum est; perungendusque is leniter, et auferendus est, vitandumque omni modo frigus, et abstinentia utendum.

At si temporibus integris, primum ibi, deinde alibi sudor incipit, foven-
dum os aqua calida; tum in solio desi-
dendum est; atque ibi quoque viden-
dum, num sub primo contactu aquæ

TRANSLATION.

two periods of bathing; the one before shivering; the other when the paroxysm is over: but those who have had lingering fevers for a long time, ought to use it, either when the accession has entirely subsided; or, if that be not regular, at least when it has been alleviated, and the body has now become as sound as usual in that state of illness.

A weak man, about to enter the bath, should guard against previous cold; and when he has come into the bath he ought to wait a little, and ascertain whether his temples be constricted, and whether he begin to perspire: if the former have taken place, and the latter not followed, the bath on that day would be injurious; he is to be anointed gently and borne away; to avoid cold by all means, and to practise abstinence.

But if his temples be sound, and perspiration first appear there, afterwards in other parts, he should in that ease foment his mouth with warm water, then descend into the solium, and even there to observe whether the first contact with the hot water on the skin produce shivering: which can scarcely happen, if the former circumstances have occurred favourably: hence it is a certain sign of a bath being injurious. Now a person may know from the nature of his constitution, whether he ought to anoint before or after going into the warm bath. Yet generally, (unless it shall be

nisi ubi nominatim, ut postea fiat, præcipietur, moto sudore leniter corpus perungendum; deinde in aquam calidam demittendum est. Atque hic quoque habenda virium ratio est, neque committendum, ut per aestum anima deficiat; sed maturius is auferendus, curioseque vestimentis involvendus est, ut neque ad eum frigus aspiret, et ibi quoque, antequam aliquid assumat, insudet.

Fomenta quoque calida sunt, milium, sal, arena; quodlibet eorum calefactum, et in linteum conjectum; si minore vi opus est, etiam solum linteum; at si majore, extineti titiones, involutique panniculis, et sic circumdati. Quin etiam calido oleo replentur utriculi; et in vasa fietilia, a similitudine quas lentieulas vocant, aqua conjicitur; et sal saeo linteo excipitur, demittiturque in aquam bene calidam, tum super id membrum, quod fovendum est, collocatur. Juxtaque ignem, ferramenta duo sunt, capitibus paulo latioribus: alterumque ex his demittitur in eum salem, et aqua super leviter aspergitur; ubi frigere coepit, ad ignem refertur, et idem in altero fit; deinde invicem in utroque: inter quae descendit salsus et calidus succus, qui contractis aliquo morbo ner-

Que duo ferramenta sunt juxta ignem, capitibus paulo latioribus; que alterum ex his demittitur in eum salem et aqua aspergitur leviter super; ubi coepit frigore, refratur ad ignem, et idem fit in altero; deinde invicem in utroque: inter quæ salsus et calidus succus descendit, qui opitulatur nervis contractis aliquo morbo.

TRANSLATION.

prescribed particularly,) it may be done afterwards, the perspiration having been excited, the body is to be anointed gently, then he is to descend into the hot bath. Here again regard must be had to the strength, nor ought he to be committed to himself, lest fainting take place from the heat: but he is to be borne away quickly, and enveloped carefully in a garment, that the cold may not affect him, and there too he ought to perspire before he takes any thing.

There are also warm fomentations of millet-seed, of salt, or of sand: any one of these being made hot, and put into a linen cloth; if less heat be required, even a linen towel alone; but if much heat be desired, then extinguished fire-brands wrapt up in cloths, and so applied around. Besides these, small leather-bottles are filled with hot oil, and water poured into earthen vessels, which from the resemblance, they call "little lentils:" and salt is put into a linen bag, and dipped in very hot water; then laid on that limb which is to be fomented. Again two irons are to be put into the fire with broad heads; and one of these is to be inserted into that salt, and the water lightly sprinkled over it; when it has begun to cool, it is to be replaced in the fire again, and the same is to be done with the other; and so on alternately: during which a hot saline juice exudes, which relieves contractions of the nerves from some disease.

vis opitulatur. His omnibus communis est, digerere id, quod vel præcordia onerat, vel fauces strangulat, vel in aliquo membro nocet. Quando autem quoque utendum sit, in ipsis morborum generibus dicetur.

TRANSLATION.

All of them have one property in common, to disperse that which either oppresses the præcordia or suffocates the fauces, or injures any limb. But the time of using each of these will be pointed out in the species of diseases themselves.

Quo est minus mirum, opus pistorium esse valentissimum, quod constat ex frumento, adipe, melle, caseo: vero ex oleribus ea debere numerari in media materia, radices, vel bulbos quorum assumimus; ex quadrupedibus leporem; omnes aves a minimis ad phœnicopterum; item omnes pisces, qui patiuntur non salem ve saliuntur solidi. Vero imbecillissimam materiam esse, omnem eaulem oleris, et quicquid nascitur in caule, qualis est eucubita, et eucumis, et capparis: omnia poma, oleas, cochlearia, que item conchylia. Sed quamvis haec ita sint discreta, tamen etiam quæ sunt sub eadem specie, recipiunt magna diserima: que alia res est vel valentior, vel infirmior (quam) alia.

Siquidem est plus alimenti in pane, quam in ullo alio: triticum est firmius quam millium; id ipsum, quam hordeum, et ex tritico siligo (est) firmissima, deinde simila, deinde cui nihil ademptum

TRANSLATION.

nutriment:) also every quadruped animal reared at home; all large wild animals, such as the roe, the stag, the boar, the wild-ass; all large fowl, such as the goose, the peacock and the crane; all the great sea fish, among which is the whale (28), and those of a similar kind; also honey and cheese. Therefore, it is the less wonderful, that that compound of the baker is so strong, which is composed of grain, lard, honey and cheese.

But pot-herbs ought to be enumerated in the second class or intermediate materials, whose roots, or bulbs, we use for food: of quadrupeds, the hare; all birds, from the least up to the phœnicopter (29); also all kinds of fish, that cannot bear salt, or are salted whole. But the weakest materials are the stems of all pot-herbs, and whatever grows on a stalk, such as the gourd, the cucumber, and the caper; all fruits, olives, periwinkles (30), and also conchylia (31). But although these are thus distinguished, yet there is a great difference in those even under the same species, one containing either more or less nutriment than another.

Therefore, there is more aliment in bread than in any thing else: wheat is stronger than millet; and that again is stronger than barley: of the wheats, the strongest is the siligo (32); the next is simila, afterwards that from which no

est, quod *αὐτόπυρον* Graeci vocant; infirmior est, ex polline; infirmissimus, cibarius panis. Ex leguminibus vero valentior faba, vel lenticula, quam pisum. Ex oleribus valentior rapa, napique, et omnes bulbi (in quibus eepam quoque, et allium numero) quam pastinaca, vel quae specialiter radieula appellatur: item firmior brassica, et beta, et porrum, quam lactuca, vel cucurbita, vel asparagus.

At ex fructibus surculorum valentiores uvæ, ficus, nuces, palmulæ, quam quæ poma proprie nominantur: atque ex his ipsis firmiora, quæ succosa, quam quæ fragilia sunt. Item ex iis avibus, quæ in media specie sunt, valentiores eæ, quæ pedibus, quam quæ volatu magis nituntur; et ex iis, quæ volatu fidunt, firmiores quæ grandiores aves, quam quæ minutæ sunt; ut ficedula et turdus. Atque eæ quoque, quæ in aqua degunt, leviorem eibum præstant, quam quæ natandi scientiam non habent.

Inter domesticas vero quadrupedes, levissima suilla est; gravissima, bubula: itemque ex feris, quo majus quodque animal, eo robustior ex eo cibus est. Pisciumque eorum, qui ex media

ORDO.

est, quod Graeci vocant *αὐτόπυρον* (autopyron): ex polline est infirmior; cibarius panis infirmissimus. Vero ex leguminibus faba, vel lenticula est valentior quam pisum. Ex oleribus rapa, que napi, et omnes bulbi (in quibus numerio quoque eepam et allium) valentior quam pastinacea, vel quæ appellatur specialiter radieula: item brassica, et beta, et porrum, firmior quam lactuca, vel eneurbita vel asparagus.

At ex fructibus surculorum, uvæ, fiens, nuees, palmulæ (sunt), valentiores quain quæ nominantur proprie poma: atque ex his ipsis quæ suecosa sunt firmiora quam quæ sunt fragilia. Item ex iis avibus quæ sunt in media speie, eæ valentiores quæ nituntur pedibus, quam quæ magis volatu, et ex iis quæ fidunt volatu, quæ grandiores aves firmiores quam quæ sunt minutæ ficedula et turdus. Atque quoque eæ quæ degunt in aqua præstant leviorem cibum quam quæ non habent scientiam natandi.

Vero inter domesticas quadrupedes, suilla est levissima; bubula gravissima, que item ex feris, quo majus quodque animal, eo robustior est eibus ex eo. Que eorum piscium qui sunt ex

TRANSLATION.

(husks) have been removed, which the Greeks call autopyros (33): that of pollen is weaker: household-bread the weakest of all. But of the leguminous class (34) the bean or lentil is stronger than the pea. The culinary vegetable, such as the rape and turnips, and all bulbous roots, (among which I number the onion and garliek,) are more nutritive than the parsnip, or that which is called by way of distinction, the garden radish: also the cabbage, beet, and leek, are stronger than the lettuce, gourd, or asparagus.

But the surculous fruits, such as the grape, figs, nuts, and dates, are stronger than those fruits properly named apples: and even of these, the succulent are better than the fragile and mealy. The birds which are in the middle class, are more nutritious which are supported on their feet, than those which fly; and of those who trust to flight, the larger birds are stronger, than those which are small, such as the beeafico and the thrush. Those also which live on water afford a lighter food than those who cannot swim.

But among the domestic quadrupeds, pork is the lightest, beef is the strongest, and of the ferine class, the larger the animal, so much stronger is the food of it. Those fish also, of the middle class, which are most in use, the heaviest are those of

materia sunt, quibus maxime utimur, tamen gravissimi sunt ex quibus salsa menta quoque fieri possunt, qualis lacertus est; deinde qui, quamvis teneriores, tamen duri sunt, ut aurata, corvus, sparsum, oculata; tum plani; post quos etiamnum leviores lupi, mullique; et post hos, omnes saxatiles.

Neque vero in generibus rerum tantummodo diserimen est, sed etiam in ipsis: quod et ætate fit, et membro, et solo, et cœlo, et habitu. Nam quadrupes omne animal, si laetens est, minus alimenti praestat: itemque quo tenerior pullus cohortalis est: in pisibus quoque media ætas, quæ nondum summam magnitudinem implevit. Deinde ex eodem sue, ungulæ, rostrum, aures, cerebellum; ex agno, hœdove, eum petiolis totum caput aliquanto, quam cetera membra, leviora sunt: adeo ut in media materia poni possint. Ex avibus, peitora, colla, alæve recte infirmis annumerantur.

Quod ad solum vero pertinet, frumentum quoque valentius est collinum, quam campestre: levior pisibus inter saxa editus, quam in arena; levior in arena, quam in limo: quo fit, ut ex stagno, vel lacu, vel flumine eadem genera graviora sint: leviorque, qui in

ORDO.

media materia, quibus utimur maxime, tamen gravissimi sunt ex quibus salsa menta possunt quoque fieri, qualis lacertus est, deinde, qui quamvis teneriores, tamen sunt duri, ut aurata, corvus, sparsum, oculata; tum plani, post quos etiamnum leviores, lupi que nulli; et post hos omnes saxatiles.

Vero neque est diserimen tantummodo in generibus rerum, sed etiam in ipsis, quod fit et ætate et membro, et solo, et cœlo, et habitu. Nam omne quadrupes animal si est lactens, praestat minus alimenti; que item pullus cohortalis quo tenerior est: in pisibus quoque media ætas quæ implevit nondum summam magnitudinem, deinde ex eodem sue ungulæ, rostrum, aures, cerebellum: ex agno, ve hœdo, totum caput cum petiolis, sunt aliquanto leviora quam cetera membra; adeo ut possint ponit in media materia. Ex avibus colla, pectora, ve alæ recte adnumerantur infirmis.

Vero quod pertinet ad solum frumentum collinum est quoque valentius quam campestre, pisibus editis inter saxa levior quam in arena: levior in arena quam in limo: quo fit ut eadem genera sint graviora ex stagno, vel lacu vel flumine: que qui vixit in

TRANSLATION.

which salsa menta (35) may be made, such as the lacertus (36); after those, although more tender, yet they are hard, such as the aurata, corvus, sparsus, oculata; then come the flat fish, after which are lighter still, the lupi, and nulli, and after these all fish found among rocks.

But there is not only a difference in the classes, but in the individual species themselves, which arises from their age, the part, the soil, climate, and condition. For every quadruped animal, if suckling, affords less nutriment; and also a cooped-fed chicken, the more tender it is: in fish also, the middle age, before they acquire their full growth. Of swine, the feet, snout, ears and brain: of the lamb or the kid, the whole head with the pettitoes are somewhat lighter than the other parts; so that they may be ranked in the middle class. Of birds, the breasts, necks and wings are correctly considered the weakest.

But what relates to soil, that corn which is reared on high grounds, is firmer than that which is produced upon a plane: fish caught among rocks are lighter than those found in sand; lighter in sand, than in mud; hence it happens that the same species are heavier reared in a pond, lake or river: and a fish living in deep water is lighter

alto, quam qui in vado vixit. Omne etiam ferum animal domestico levius; et quodecumque humido cœlo, quam quod siceo natum est.

Deinde eadem omnia pinguia, quam maera; recentia, quam salsa; nova, quam vetusta, plus alimenti habent. Tum res eadem magis alit jurulenta, quam assa; magis assa, quam elixa. Ovum durum valentissimæ materiae est; molle, vel sorbile, imbecillissimæ. Cumque panificia omnia firmissima sint, elota tamen quædam genera frumenti, ut aliea, oryza, ptisana, vel ex iisdem facta sorbitio, vel pultieula, et aqua quoque madens panis, imbecillissimis annumerari potest.

Ex potionibus vero, quæcumque ex frumento faeta est, itemque lae, mulsum, defrutum, passum, vinum aut dulee, aut vehemens, aut mustum, aut magnæ vetustatis, valentissimi generis est. At aeetum, et id vinum quod pauorum annorum, vel austерum, vel pingue est, in media materia est: ideoque infirmis numquam generis alterius dari debet.

Aqua omnium imbecillissima est. Firmiorque ex frumento potio est, quo firmius fuit ipsum frumentum: firmior ex eo vino, quod bono solo, quam quod tenui; quodque temperato cœlo,

ORDO.

alto, levior quam qui in vado. Etiam omne ferum animal levius quam ilōmesticus, et quodecumque est natum humido cœlo, quam quod siceo.

Deinde omnia eadem pinguia, habent plus alimenti quam maera; recentia quam salsa, nova quam vetusta. Tum eadem res alit plus, jurulenta quam assa: magis assa quam elixa. Durnum ovum est valentissimæ materiae, molle, vel sorbile imbecillissimæ. Que eum oūnia panificia sint firmissima, tamen quædam genera frumenti elota; ut aliea, oryza, ptisana vel sorbitio vel pultieula facta ex iisdem et quoque panis madens aqua potest administerari imbecillissimis.

Vero ex potionibus quæcumque est faeta ex frumento que item lae, mulsum, defrutum, passum, vinum aut dulee, aut vehemens, aut mustum, aut magnæ vetustatis, est valentissimi generis. At aeetum et id vinum quod est pauorum annorum, vel austereum vel pingue est in media materia, que ideo alterius generis debet nunquam dari infirmis.

Aqua est imbecillissima omnium. Que potio ex frumento est firmior, quo frumentum ipsum fuit firmius: firmior ex eo vino quod natum est bono solo, quam quod tenui: que quod temperato cœlo quam quod aut ni-

TRANSLATION.

than one in a shallow. Also every ferine animal is lighter than one domesticated; and whatever is reared in a humid climate (*is lighter*) than those in a dry.

In the next place, all these being fat have more nourishment than the lean; fresh, more than salted; new, than stale. Then the same article nourishes more, when made into soup than roasted; more roasted, than boiled. Hard boiled eggs are of the strongest class; soft or poached eggs are of the weakest. Yet although all bread-grains are the strongest, there are some species of corn being washed, such as aliea (37), riee, strnek-barley (38), or gruel, or pottage (39) made of these, and also bread moistened with water, may be placed in the weakest class.

But of drinks, whatever is prepared from grain, also milk, nurse, defrutum (40), raisin-wine, wine, either sweet or strong, new wine or very old, are of the most nutritive kind. But vinegar, and wine a few years old, whether austere or rich, are in the middle class: and on that account the other kind ought never to be given to the weak.

Water is the weakest of drinks. All drinks prepared from grain, have a correspondent strength with that grain: and the wine produced on a good soil is stronger than that of a thin light soil; and that which has been cultivated in a

quam quod aut nimis humido, aut nimis sieeo, nimirumque aut frigido, aut ealido natum est. Mulsum, quo plus mellis habet; defrutum, quo magis incoetum; passum, quo ex sieiore uva est, eo valentius est.

Aqua levissima pluvialis est; deinde fontana; tum ex flumine; tum ex puto; posthae ex nive, aut glacie; gravior his, ex laeu; gravissima, ex palude. Faeilis etiam, et necessaria cognitio est naturam ejus requirentibus. Nam levis, pondere appetat; et ex iis, quæ pondere pares sunt, eo melior quæque est, quo eelerius et calefit et frigescit, quoque eelerius ex ea legumina percoquuntur.

Fere vero sequitur, ut, quo valentior quæque materia est, eo minus faeile concoquatur; sed si coneocita est, plus alat. Itaque utendum est materiae genere pro viribus; modusque omnium pro genere sumendus. Ergo imbecillis hominibus, rebus infirmissimis opus est; mediocriter firmos, media materia optime sustinet; et robustis apta validissima est. Plus deinde aliquis assumere ex levioribus potest; magis in iis, quæ valentissima sunt, temperare sibi debet.

TRANSLATION.

temperate atmosphere, than the production of an air either too moist or too dry, too cold or too hot. Hydromel is the stronger, in proportion to the honey contained in it: defrutum, the longer it is boiled: raisin-wine, by how much dryer the grapes of which it is made.

Rain water is the lightest; next is spring water, then river water; and lastly that from a well; after these, that from snow or ice; lake-water is heavier than these. The heaviest is marsh-water. The knowledge also, is both easy and necessary to those desirous of searching into the nature of it. For light water is apparent by the weight; and of those which are of equal weights, by how much the sooner any of them become hot or cold, by so much are they the more preferable, and the sooner leguminous articles are boiled in it.

But for the most part, the more substantial each article may be, it is boiled less easily; but if concocted, it is the more nutritious. Therefore the nature of each article must be determined by the strength of the patient and the quantity to be taken proportioned to the kind. Thus a weak man must make use of the weakest things; the middle class support best the moderately strong; and the strongest is fit for the robust. Lastly, a person may take more of that which is lighter; but in those things which are more substantial he ought to moderate his desires.

ORDO.

mis humido aut nimis sieco, que aut nimirum frigidio, aut calido. Mulsum est eo valentius, quo habet plus mellis: defrutum quo magis incoctum: passum quo est sieiore uva.

Pluvialis aqua est levissima: deinde, fontana; tum ex flumine; tum ex puto: post haec ex nive, aut glacie; gravior his ex laeu: gravissima ex palude. Etiam cognitio est facilis, et necessaria requirentibus naturam ejus. Nam levis appetat pondere, et ex iis quæ sunt pares pondere, quæque est eo melior, quo eelerius et calefit et frigescit, que quo eelerius legumina percoquuntur ex ea.

Vero fere sequitur, ut, quo valentior quæque materia est, co minus facile concoquatur; sed si est concocta alat plus. Itaque est utendum genere materiae pro viribus: que modus omnium sumendus pro genere. Ergo imbecillis hominibus est opus infirmissimis rebus: media materia sustinet optime medicriter firmos; et validissima est apta robustis. Deinde a quis potest assimilare plus ex levioribus; debet temperare sibi magis in iis quæ sunt valentissima.

CAP. XIX.

QUÆ NATURA, AC PROPRIETAS CUJUSQUE REI SIT, QUA VESGINUR.

NEQUE hæc sola discrimina sunt; sed etiam aliae res boni succi, aliae mali sunt; quas *εὐχύλους* vel *κακοχύλους* Græci vocant; aliae lenes, aliae acres; aliae crassiorem pituitam in nobis faciunt, aliae tenuiorem; aliae idoneæ stomacho, aliae alienæ sunt: itemque aliae inflant, aliae ab hoc absunt; aliae calefaciunt, aliae refrigerant; aliae facile in stomacho accescunt, aliae non facile intus corrumpuntur; aliae movent alvum, aliae suppressunt; aliae citant urinam, aliae tardant; quædam somnum movent, quædam sensus excitant. Quæ omnia idco noscenda sunt, quoniam aliud alii, vel corpori, vel valetudini, conuenit.

ORDO.

CAP. XIX.

QUÆ SIT NATURA AC PROPRIETATIS CUJUSQUE REI, QUA VESGINUR.

NEQUE sunt hæc sola discrimina, sed etiam aliae res sunt boni succi, aliae mali; quas Græci vocant *εὐχύλους* (*enclinulous*) vel *κακοχύλους* (*cacochulous*) aliae lenes; aliae acres; aliae faciunt crassiorem pituitam in nobis; aliae tenuiorem; aliae acescant facile in stomacho; alienæ: que item aliae inflant, aliae absunt ab hoc; aliae calefaciunt; aliae refrigerant; aliae acescant facile in stomacho; aliae non corrumpuntur facile intus; aliae movent alvum; aliae suppressunt, aliae citant urinam; aliae tardant, quædam movent somnum, quædam excitant sensus. Omnia quæ sunt noseenda, ideo quoniam aliud conveuit aliud vel corpori valetudini.

TRANSLATION.

CHAP. XIX.

GENERAL PROPERTIES OF DIFFERENT FOODS.

Nor are these the only differences; for some things afford good juices, others bad; these the Greeks call *euchulous* or *cacochulous*: some are mild, others aerid; some generate a thicker phlegm in us, others more fluid; some are proper for the stomach, others are improper; and also, some produce flatus, others do not. Some warm, others refrigerate; some readily generate acid in the stomach, others are not so easily decomposed; some move the bowels, others suppress them; some promote the urine, others retard it; some induce sleep, others rouse the senses. All these things ought to be known, on this account, that one thing may be proper, either for the constitution of a patient, or some peculiarity in another.

CAP. XX.

ORDO.

DE HIS, QUÆ BONI SUCCI SUNT.

BONI succi sunt, triticum, siligo, alica, oryza, amyllum, tragum, ptisana, lac, caseus mollis, omnis venatio, omnes aves, quæ ex media materia sunt; ex majoribus quoque eæ, quas supra nominavi: medii inter teneros durosque pisces, ut mullus, et lupus: verna lactuca, urtica, malva, cucumis, cucurbita, ovum sorbile, portulaca, cochleæ, palmulae: ex pomis quodecumque neque acerbum, neque acidum est: vinum dulce, vel lene, passum, defrutum, oleæ, quæ ex his duobus in alterutro servatæ sunt: vulvæ, rostra, trunculique suum, omnis pinguis caro, omnis glutinosa, omne jecur.

CAP. XX.

DE HIS, QUÆ SINT BONI SUCCI.

TRITICUM, siligo, alica, oryza, amyllum, tragum, ptisana, lac, mollis caseus, omnis venatio, omnes aves qnæ sunt ex media materia sunt boni succi; quoque eæ ex majoribus, quas nominavi supra: medii inter teneros que duros pisces, nt mullus, et lupus, verna lactuca, urtica, malva, cucumis, cucurbita, ovum sorbile portulaca, cochleæ, palmulae: ex pomis quodecumque est neque acerbum neque acidum: vinum dulce, vel lene, passum, defrutum, oleæ quæ servatæ sunt in alterutro ex his duobus: vulvæ, rostra, que trunculique suum, omnis pinguis caro, omnis glutinosa, omne jecur.

TRANSLATION.

CHAP. XX.

OF THOSE THINGS CONTAINING GOOD JUICES.

HEALTHY juices are produced by wheat, siligo, alica, rice, starch(41), tragum(42), struck-barley, milk, soft cheese, all venison, all birds of the middle class; and of the larger birds, those I have mentioned above: of fish, those between the tender and hard, such as the barbel, and the pike; the spring lettuce, the nettle, the mallow, the cucumber, the gourd, poached-eggs, purslane, periwinkles, dates; whatever fruits are neither bitter nor acid: sweet or mild wine, raisin wine, defrutum, olives which have been preserved in either of the two last mentioned liquors: the wombs, cheeks, and pettitoes of swine, all fat flesh, all glutinous substances, and all livers.

CAP. XXI.

DE HIS, QUÆ MALI SUCCI SUNT.

MALI vero sueei sunt, milium, panicum, hordeum, legumina, caro domestica permacula, omnisque caro salsa, omne salsamentum, garum, vetus eascus, siser, radieula, rapa, napi, bulbi, brassica, magisque etiam eyma ejus, asparagus, beta, cucumis, porrum, eruca, nasturtium, thymum, nepeta, satucia, hyssopum, ruta, anethum, foeniculum, cuminum, anisum, lapathum, sinapi, allium, eepa, lienes, renes, intestina, pomum quodecumque acidum vel acerbum est, acetum, omnia aeria, acida, acerba, oleum, pisces quoque saxatiles, omnesque, qui ex tenerrimo genere sunt, aut qui rursus nimium duri virosique sunt, ut fere quos stagna, lacus, limosique rivi ferunt, quique in nimiam magnitudinem excesserunt.

ORDO.

CAP. XXI.

CAP. XXVII.

DE HIS, QUÆ CALEFACIUNT, AUT
REFRIGERANT.DE HIS, QUÆ AUT CALEFACIANT,
AUT REFRIGERANT.

AT calefaciunt, piper, sal, caro omnis jurulenta, allium, cepa, ficus arida, salsamentum, vinum, et quo meracius est, eo magis. Refrigerant olera, quorum crudi caules assumuntur, ut intubus, et laetuca: item coriandrum, cucumis, elixa cucurbita, beta, mora, cerasa, mala austera, pira fragilia, caro elixa, præcipueque acetum, sive cibus ex eo, sive potio assumitur.

AT piper, sal, omnis jurulenta earo, allium, cepa, arida fieus, salsamentum, vinum, et eo magis, quo est meracius calefaciunt. Olera refrigerant, crudi eaules quorum assumuntur, ut intubus, et laetuea: item eoriandrum, enemmis, elixa cuerbita, beta, mora, eerasa, austera mala, fragilia pira, elixa earo, que præcipue acetum, sive cibus, sive potio assumitur ex eo.

TRANSLATION.

CHAP. XXVII.

OF THE CALEFACIENTS AND REFRIGERANTS.

Now the following excite warmth, pepper, salt, all stewed meat, garlick, onion, dry figs, salt provision, wine, and the more so, in proportion to its purity. Refrigerants are such culinary plants whose stalks are eaten raw, as endive, and lettuce, also eoriander, euember, boiled gourd, beet, mulberries, cherries, austere apples, mealy pears, boiled flesh, and especially vinegar taken either with the food or drink.

CAP. XXVIII.

DE HIS, QUÆ FACILE INTUS CORRUM-
PUNTUR.

FACILE autem intus eorumpuntur, panis fermentatus, et quisquis alius quam ex tritieo est, lac, mel; ideoque etiam laetentia atque omne pistorium opus; teneri pisees, ostrea, olera, caseus et reeens et vetus, crassa vel tenera earo, vinum dulce, mulsum, defrutum, passum; quidquid deinde vel jurulentum est, vel nimis dulce, vel nimis tenuer.

At minime intus vitiantur, panis sine fermento, aves, et eæ potius duriiores, duri pisees; neque solum aurata puta, aut scarus, sed etiam lolligo, loeusta, polypus: item bubula, omnisque dura earo; eademque aptior est, si macra, si salsa est; omniaque salsa menta; coheleæ, murices, purpuræ; vinum austrum, vel resinatum.

ORDO.

CAP. XXVIII.

DE HIS, QUÆ CORRUMPUNTUR
FACILE INTUS.

AUTEM fermentatus panis, et quisquis alius quam ex tritico, lac, mel, corrumpuntur facile intus; que ideo etiam laetentia atque omne pistorium opus; teneri pisces, ostrea, olera, et reeens et vetus casens, crassa vel tenera caro, dulce vinum, mulsum, defrutum, passum; deinde quidquid est vel jurulentum, vel nimis dulce, vel nimis tenuer.

At panis sine fermento, aves, et potius eæ duriores, duri pisces, vitiantur minime iutus; neque aurata puta, aut searsus solum, sed etiam lolligo, loeusta, polypus: item bubula, que omnis dura earo; que eadem est aptior, si est maera, si (est) salsa; que omnia salsa menta; cochleæ, murices, purpuræ; ansterum, vel resinatum vinum.

TRANSLATION.

CHAP. XXVIII.

OF THOSE THINGS WHICH ARE EASILY DECOMPOSED IN THE STOMACH.

FERMENTED bread is easily corrupted in the stomach, and any other, except that which is made of wheat, milk, honey; therefore all milky substauces, and the productions of the pastry cook: tender fish, oysters, pot-herbs, both new and old cheese, coarse or tender flesh, sweet wine, hydromel, defrutum, raisin wine; finally, whatever is either succulent, or too sweet, or too thin.

But unfermented bread is least easily corrupted in the stomach, also birds, and especially the harder kind, hard fish; not only, for instance the aurata, or the sears (49), but even the ealamary, lobster, polypus; also beef and all hard flesh; and the same is more preferable if lean and salted, and all salsa menta; periwinkles, murices, purpuræ; austere or resined wine.

CAP. XXIX.

DE HIS, QUÆ ALVUM MOVENT.

AT alvum movent, panis fermentatus, magisque si cibarius vel hordeaceus est ; brassica, si suberuda est, lactuca, aene-thum, nasturtium, ocimum, urtica, portulaca, radicula, capparis, allium, cepa, malva, lapathum, beta, asparagus, cucurbita, cerasa, mora, poma omnia mitia, ficus etiam arida, sed magis viridis, uvæ recentes, pingues minutæ aves, cochleæ, garum, salsamentum, ostrea, pelorides, echini, musculi, et omnes fere conchulæ, maximeque jus earum ; saxatiles, et omnes teneri pisces, sepiarum atramentum ; si qua caro assumitur pinguis, eadem vel jurulenta, vel elixa ; aves, quæ natant ; mel crudum, lac, lactentia omnia, mulsum, vinum dulce vel salsum, aqua, tenera omnia, tepida, dulcia, pinguia, elixa, jurulenta, salsa, diluta.

ORDO.

CAP. XXIX.

DE HIS, QUÆ MOVENT ALVUM.

AT fermentatus panis, que magis si est cibarius vel hordeaceus movent alvum ; brassica, si est suberuda, lactuca, anethum, nasturtium, ocimum, urtica, portulaca, radicula, capparis, allium, cepa, malva, lapathum, beta, asparagus, cucurbita, cerasa, mora, omnia mitia poma, etiam arida ficus, sed viridis magis, recentes uvæ, minutæ pingues aves, cochleæ, garum, salsamentum, ostrea, pelorides, echini, musculi, et fere omnes conchulæ, que maxime jus earum ; saxatiles, et omnes teneri pisces, atramentum sepiarum ; si qua pinguis caro assumitur, eadem (esse) vel jurulenta, vel elixa ; aves, quæ natant ; crudum mel, lac, omnia lactentia, mulsum, dulce vel salsum vinum, aqua, omnia tenera, tepida, dulcia, pinguia, elixa, jurulenta, salsa, diluta.

CHAP. XXXIII.

OF SUCH THINGS AS DRAW AND SOFTEN THE BODY.

NOW there are many things capable of forwarding matter; but as these principally consist of exotic medicines, and may assist other cases, more than those which are intended to be relieved principally by diet, I shall defer them for the present: but I will describe those which are ready at hand, and applicable to those diseases; having a digestive power, and thus extracting offending matter from the body,

eo, quod mali est, extrahunt. Habent autem hauc facultatem, semina crueæ, nasturtii, radiculæ; præcipue tamen omnium, sinapi. Salis quoque et fici eadem vis est.

Leniter vero simul et reprimunt et molunt, lana succida ex aceto vel vino, cui oleum adjectum est; contritæ palmulæ, furfures in salsa aqua vel aceto decocti.

At simul reprimunt et refrigerant, herba muralis, παρθένιον vel περδίκιον appellant, serpyllum, pulegium, ocimum, herba sanguinalis, quam Græci πολύγονον vocant, portulaca, papaveris folia, capreolique vitium, coriandri folia, hyoscyamum, muscus, siser, apium, solanum, quam στρύχον Græci vocant, brassicæ folia, intubus, plantago, fœniculi semen, contrita pira vel mala, præcipueque cotonea, lenticula, aqua frigida, maximeque pluvialis, vinum, acetum, et horum aliquo madens vel panis, vel farina, vel spongia, vel cinis, vel lana succida, vel etiam lintelolum, creta Cimolia, gypsum, melinum, myrtleum, rosa, acerbum oleum, verbenarum contusa cum teneris caulibus folia; cuius generis sunt olea, cypressus, myrtus, lentiscus, tamarix, ligustrum, rosa, rubus, laurus, hedera, Punicum

ORDO.

eo quod est mali. Antem habent hauc facultatem, semina erneæ, nasturtii, radiculæ; tamen præcipue omnium, sinapi. Quoque vis salis et fici est eadem.

Vero simul et reprimunt leniter et molunt, succida lana ex aceto vel vino, cui oleum est adiectum; contritæ palmulæ, furfures decocti in salsa aqua vel aceto.

At simul reprimunt et refrigerant, muralis herba, appellant παρθένιον (parthenium) vel περδίκιον (perdicium), serpyllum, pulegium, ocimum, sanguinalis herba, quam Græci vocant πολύγονον (polygonum), portulaca, folia papaveris, que capreoli vitium, folia coriandri, hyoscyamum, muscus, siser, apium, solanum, quam Græci vocant στρύχον (struchnon), folia brassicæ, intubus, plantago, semen fœniculi, contrita pira vel mala, que præcipue cotonea, lenticula, frigida aqua, que maxime pluvialis, vinum, acetum, et vel panis, vel farina, vel spongia, vel cinis, vel succida lana, vel etiam lintelolum, madens aliquo horum, Cimolia creta, gypsum, melinum, myrtleum, rosa, acerbum oleum, folia verbenarum contusa cum teneris caulibus; cuius generis sunt olea, cypressus, myrtus, lentiscus, tamarix, ligustrum, rosa, rubus, laurus, hedera, Pu-

TRANSLATION.

concerning which I am about to speak presently. Now these things have this power, the seeds of rocket, of cresses, radish, but the principal is mustard. The same properties reside in salt and figs.

Sordid-wool (53) dipped either in vinegar, or wine to which oil has been added, is both gently disengaged and at the same time emollient, also bruised dates, bran boiled in salt water or vinegar.

But these things at the same time repress and cool, viz. Wall-pellitory, (they call it parthenion or perdikion,) wild thyme, pennyroyal, basil, blood-herb, (which the Greeks call polygonon,) purslane, poppy leaves, and the tendrils of vines, coriander leaves, henbane, moss, skirret, parsley, nightshade, (which the Greeks call struchnon,) cabbage leaves, endive, plantain, fennel seed, bruisèd pears or apples, and especially quinces, small lentils, cold water, and especially rain water, wine, vinegar, and bread, or flour, or sponge, or pieces of cloth, or sordid wool, or even linen moistened in any of these liquors: Cimolian chalk, gypsum, quince oil, myrtle oil, oil of roses, bitter oil, the leaves and tender stalks of vervains bruised together; such as the olive, the cypress, myrtle, mastich-tree, tamarisk, privet, rose, bramble, laurel, ivy, pomegranate.

malum. Sine frigore autem reprimunt, cocta mala cotonca, malicorum, aqua calida, in qua verbenæ coctæ sunt, quas supra posui, pulvis vel ex fæce vini, vel ex myrti foliis, amaræ nuces.

Calefacit vero, ex qualibet farina cataplasma, sive ex tritici, sive ex farris, sive hordei, sive ervi, vel lolii, vel milii, vel panici, vel lenticulæ, vel fabæ, vel lupini, vel lini, vel fœni græci, ubi ea deferbuit, calidaque imposita est. Valentior tamen ad id omnis farina est ex mulso, quam ex aqua cocta. Præterea cyprinum, irinum, medulla, adeps ex fele, oleum, magisque si vetus est, juncta que oleo sal, nitrum, gith, piper, quinquefolium.

Fereque, quæ vehementer et reprimunt et refrigerant, durant; quæ calefaciunt, digerunt et emolliunt: præcipue ad emolliendum potest cataplasma ex lini vel fœni græci semine.

His autem omnibus, et simplicibns, et permistis, varie medici utuntur; ut magis, quid quisque persuaserit sibi, appareat, quam quid evidenter comperebit.

ORDO.

ninem malum. Antem reprimunt sine frigore, cocta cotonea mala, malicorum, calida aqua, in qua verbenæ sunt cocta, quas posui supra, pulvis vel ex fæce vini, vel ex foliis myrti, amarae nuces.

Vero cataplasma ex qualibet farina calefaicit, sive ex tritici, sive ex farris, sive hordei, sive ervi, vel lolii, vel milii, vel panici, vel lenticulæ, vel fabæ, vel lupini, vel lini, vel fœni græci, ubi ea deferbuit, que imposta est calida. Tamen omnis farina est valentior ad id, cocta ex mulso, quam ex aqua. Præterea cyprinum, irinum, medulla, adeps ex fele, oleum, que magis, si est vetus, que sal juncta oleo, nitrum, gith, piper, quiunquefolium.

Que fere quæ et reprimunt et refrigerant vehementer, durant; quæ calefaciunt, digerunt et emolliunt: que cataplasma ex semine lini vel fœni græci potest præcipue ad emolliendum.

Antem medicintuntur omnibus his et simplicibus et permistis varie; ut appareat quid quisque persnaserit sibi, magis quam quid empererit evidenter.

TRANSLATION.

But these repress without cooling, viz. boiled quinces, pomegranate rind, hot water, in which vervains have been boiled, which I have mentioned above, wine lees or myrtle leaves reduced to powder, bitter almonds.

Calefacients are cataplasms made of any flour, whether that of wheat, or of far (54), or of barley, of vetches, or of darnel, or of millet, or of panem, or of small lentils, or of beans, or of lupines, or of lint-seed, or of fennugreek, being boiled and then laid on hot. Indeed all kinds of meal are rendered more efficient for this purpose, by being boiled in hydromel, rather than water. Besides these, privet oil, oil of iris, marrow, fat of a eat, oil, especially if it be old, and salt mixed with oil, nitre, git, pepper, einknefoil.

For the most part those things, which both repress and cool violently, *at the same time* harden; those things which excite warmth, digest and soften; but a cataplasm of lint seed, or fennugreek is the most powerful emollient.

But physieians use them all, both simple and compound, varionsly; so that we see what each persuaded himself of, rather than what he might have discovered to be evidently useful.

AURELIUS CORNELIUS CELSUS

ON MEDICINE.

CHAP. I.

OF THE DIFFERENT KINDS OF DISEASES.

HAVING premised all these things, which pertain to diseases in general, I shall proceed to the treatment of each. Now the Greeks have divided these into two species: one they termed acute, the other chronic: and on this account, because they did not always assume the same form, some referred the same diseases to the acute, which others classed among the chronic. By which it is manifest, that there are many species of them.

For some are short and acute, which either carry off the patient in a short time, or are themselves soon terminated: some are chronic, under which, there is

exitium est; tertiumque genus corum est, qui modo aeuti, modo longi sunt; idque non in febribus tantummodo, in quibus frequentissimum est, sed in aliis quoque fit. Atque etiam, praeter hos, quartum est; quod neque aeustum dici potest, quia non perimit; neque utique longum, quia, si ocurrirrit, facile sanatur. Ego, eum de singulis dieam, ejus quisque generis sit, indicabo. Dividam autem omnes in eos, qui in totis corporibus consistere videntur, et eos, qui oriuntur in partibus. Incepiam a prioribus, pauca de omnibus praefatus.

In nullo quidem morbo minus fortuna sibi vindicare, quam ars potest; utpote eum, repugnante natura, nihil medicina proficiat. Magis tamen ignoscendum medico est parum proficiunt in aeutis morbis, quam in longis. Hie enim breve spatium est, intra quod, si auxilium non profuit, æger extinguitur: ibi et deliberationi, et mutationi remediorum tempus patet; adeo ut raro, si inter initia medicus accessit, obsequens æger sine illius vitio pereat. Longus tamen morbus eum penitus insedit, quod ad difficultatem pertinet, aeuto par est. Et acutus quidem, quo vetustior est, longus autem, quo recentior, eo facilius curatur. Alterum illud ig-

ORDO.

tertium genus est eorum, qui sunt modo acuti, modo longi; que id fit non tantummodo in febribus, in quibus est frequentissimum, sed quoque in aliis. Atque etiam, praeter hos, est quartum, quod neque potest dici aeustum, quia non perimit; neque utique longum, quia, si ocurrirrit, sanatur facile. Ego indicabo ejus generis quisque sit, cum dicam de singulis. Autem dividam omnes in eos, qui videntur consistere in totis corporibus, et eos qui oriuntur in partibus. Incepiam a prioribus, praefatus pauca de omnibus.

In nullo morbo quidem fortuna potest vindicare minus sibi, quam ars; ntpote enim medicina proficiat nihil, natura repugnante. Tamen est ignoscendum magis medico proficiente parum in acutis morbis, quam in longis. Enim hic spatium est breve, intra quod, si auxilium non profuit, æger extinguitur: ibi tempus patet et deliberationi, et mutationi remediorum, adeo ut, si medicus accessit inter initia obsequens æger raro pereat sine vitio illius. Tamen cum longus morbus insedit penitus, quod pertinet ad difficultatem, est par acuto. Et acutus quidem eurat eo facilis, quo vetustior est, autem longus, quo recentior. Oportet illud alterum non ig-

TRANSLATION.

neither a speedy recovery, nor a speedy death; and there is a third kind of them, which are sometimes acute, sometimes chronic; and this not only happens in fevers, in which it is most frequent, but also in other diseases. Besides these there is a fourth, which can neither be called acute, because they do not prove fatal; neither are they truly chronic, because, if the means be employed, they are easily cured. I shall point out to what genera each may belong, when I come to treat of them severally. Now I shall divide them into those which seem to occupy the whole body, and those which arise in parts only. Having prefaced these by a few observations on all, I shall commence with the first.

Indeed there is no disease in which chance can claim less for itself, than art; inasmuch as medicine can avail nothing in opposition to nature. Yet it is more pardonable in a physician to fail in acute diseases, than in chronic. For in the first, the space is short, in which, if the remedies fail, the patient is lost: in the latter case, there is time both for deliberation, and for a change of remedies; so that if the physician have been applied to in the beginning, a tractable patient is rarely lost, unless it be the fault of his attendant. Yet when a chronic disease has become thoroughly incorporated, it is, comparatively, as difficult as an acute one. Therefore when an acute disease becomes chronic, and a chronic, recent, they are both more easily cured.

norari non oportet, quod non omnibus ægris eadem auxilia convenient. Ex quo incidit, ut alia atque alia summi auctores, quasi sola, vindicaverint, prout cuique cessrant.

Oportet itaque, ubi aliquid non respondet, non tanti putare auctorem, quanti ægrum, experiri que aliud atque aliud: sic tamen, ut in acutis morbis cito mutetur, quod nihil prodest; in longis, quos tempus, ut facit, sic etiam solvit, non statim condemnatur, si quid non statim profuit; minus vero removeatur, si quid paulum saltem juvat; quia profectus tempore expletur.

TRANSLATION.

There is another thing which one ought not to be ignorant of, that is, the same remedies do not benefit all patients. Hence it has happened that the highest authors have defended the efficacy, some of one thing, some of another, as if the only remedies, according as they had succeeded to each.

Therefore it is necessary, when any one of these (*highly recommended*) remedies fails, not to think the author of so much repute as the patient's life, but to try another and another remedy: yet so, that in acute diseases, that which appears to do no good, may be changed very soon: in chronic diseases, as they progress with time, so are they resolved by time, consequently if anything have not benefited immediately, it should not be condemned immediately: much less must that be removed which has at least given some relief; because the desired effects are completed by time.

CHAP. II.

GENERAL DIAGNOSTICS OF ACUTE AND CHRONIC, INCREASING AND DECREASING DISEASES; MODE OF TREATMENT; NECESSARY PRECAUTIONS ON THE APPREHENSION OF DISEASE.

It is easy to know even in the commencement, whether a disease be acute or

sit: non in iis solum, in quibus semper ita se habet; sed in his etiam, in quibus variat. Nam ubi sine intermissionibus accessiones et dolores graves urgent, acutus morbus est: ubi lenti dolores, lentæve febres sunt, et spatia inter acessiones porriguntur, aeeduntque ea signa, quæ in priore volumine exposita sunt, longum hunc futurum esse, manifestum est.

Videndum etiam est, morbus an increseat, an consistat, an minuatur: quia quædam remedia increasingentibus morbis, plura inclinatis convenient; eaque, quæ crescentibus apta sunt, ubi acutus increasingens urget, in remissionibus potius experienda sunt. Inerescit autem morbus, dum graviores dolores, acessionesque veniunt; hæque et ante, quam proximæ, revertuntur, et postea desinunt. Atque in longis quoque morbis, etiam tales notas non habentibus, seire licet, inerescere, si somnus incertus est, si deterior concoctio, si foediores dcjections, si tardior sensus, si pigrior mens, si percurrit corpus frigus aut calor, si id magis pallet. Ea vero, quæ contraria his sunt, decedentis ejus notæ sunt.

Præter hæc, in acutis morbis serius æger alendus est, nec nisi jam in-

ORDO.

tus, quis longus: non solum in iis in quibus habet se semper ita, sed etiam in his in quibus variat. Nam ubi graves accessiones et dolores urgent sine intermissionibus, morbus est acutus: ubi dolores sunt lenti, ve febres lentæ, et spatia inter acessiones porriguntur, que ea signa aeedunt, quæ exposita sunt in priore volumine, est manifestum hunc futurum esse longum.

Etiam est videndum, an morbus increseat, an eosistat, an minuatur: quia quædam remedia convenient increasingentibus morbis, plura inclinatis; que ea, quæ sunt apta crecentibus, ubi aetus increasingens urget, sunt experienda potius in remissionibus. Autem morbus inerescit dum graviores dolores que acessiones veniunt; que hæc et revertuntur ante, et desinunt postea, quam proximæ. Atque quoque in longis morbis, etiam non habentibus tales notas, licet seire inerescere, si somnus est incertus, si concoctio deterior, si dejectiones foediores, si sensus tardior, si mens pigrior, si frigus aut calor perecurrit corporis, si id magis pallet. Vero ea quæ sunt contraria his, sunt notæ ejus deeealentis.

Præter hæc in acutis morbis æger est alendus serius, nee nisi

TRANSLATION.

chronic: not only in those cases which are always so; but also in those which vary. For when violent aecessions and pains oppress the patient without intermission, the disease is acute: when the pains are moderate, or the fever slight, and the intervals between the paroxysms prolonged, and those symptoms aceede which have been explained in the preceeding book, it is manifest that the disease is about to become chronic.

It is necessary to observe also, whether the disease be progressing, stationary, or receding: because some remedies are proper for increasing diseases, much more for those which are declining; and those remedies which are applicable to increasing diseases, when an acute disorder is progressing, ought rather to be tried in the remissions. Now a disease increases as long as severe pains and paroxysms come on; when these return sooner, and cease later than the last accession. Even in chronic diseases not having those signs, it is held to increase, if the sleep be interrupted, if digestion be impaired, if the motions be more fetid, if the senses be more dull, if the mind be less active, if a sense of cold or heat thrill through the body, and, if that be more pallid than usual. But the symptoms which are the reverse of these, are the prognoses of its retrogression.

Besides these things, in acute diseases the patient is to have food at a more

clinatis; ut primo dempta materia impetum frangat: in longis maturius, ut sustinere spatium affecturi mali possit. Ac si quando is non in toto corpore, sed in parte est; magis tamen ad rem pertinet, vim totius corporis moliri, quam proprie partes ægræ samentur. Multum etiam interest, ab initio quis reete euratus sit, an perperam: quia eu-ratio minus iis prodest, in quibus assidue frustra fuit. Si quis temere habitus, adhuc integris viribus vivit, admota curatione momento restituitur.

Sed cum ab iis ceperim, quæ notas quasdam futuræ adversæ valetudinis exhibent, curationum quoque principium ab animadversione ejusdem temporis faciam. Igitur, si quid ex iis, quæ proposita sunt, incidit, omnium optima sunt, quies et abstinentia; si quid bibendum, aqua; idque interdum uno die fieri satis est; interdum, si terrentia manent, biduo: proximeque abstinentiam sumendus est cibus exiguum, bibenda aqua; postero die etiam vinum; deinde invicem alternis diebus, modo aqua, modo vinum, donec omnis causæ metus finiatur. Per hæc enim sæpe

ORDO.

jam inclinatis; ut materia dempta primo frangat impetum: in longis maturius, ut possit sustinere spatium mali affecturi. Ac si quando is non est in toto corpore, sed in parte, tamen pertinet magis ad rem, moliri vim totius corporis, quam partes ægræ proprie samentur. Etiam interest multum, quis curatus sit recte ab initio, an perperam: quia curatio prodest minus iis in quibus fuit assidue frustra. Si quis habitus temere vivit, vivit adhuc viribus integris, curatione admota, restituitur momento.

Sed cum ceperim ab iis quæ exhibent quasdam notas adversæ valetudinis futuræ, faciam principiū quoque curationum ab animadversione ejusdem temporis. Enim saepè gravis morbus

TRANSLATION.

distant period, except in those already receding; so that the first privation may break its violence: in chronic maladies earlier, that the patient may be able to sustain the duration of the disease that is about to affect him.

But if at any time, that disease be not in the whole body, but in a part; then it is more pertinent to the ease, to support the strength of the whole body, than that the diseased parts in particular should become the object of our care. It is also of great importance, whether a patient have been correctly treated, or maltreated from the beginning: because the subsequent treatment will be less successful with those on whom previous attempts have been assiduously frustrated. If any one, having been improperly treated, survive with his physical strength as yet unbroken, he may be restored in a short time, by the application of proper treatment.

But since I have begun with those symptoms which exhibit certain marks of future disease, I shall also commence the treatments by animadverting to the same time. Therefore if any of those things happen, which have been previously mentioned, the best of all remedies are rest and abstinence: if any thing be drunk it should be water; and sometimes it is sufficient to do that for one day: sometimes for two, when the alarming symptoms continue: and the next day after abstinence little food is to be taken, and water for the drink: on the following day even wine may be drunk, then every other day, alternately wine and water, until every cause

instans gravis morbus discutitur. Plurimi que falluntur, dum se primo die protinus sublaturos languorem, aut exercitatione, aut balneo, aut eaeta dejectione, aut vomitu, aut sudationibus, aut vino sperant. Non quod non interdum id ineidat, aut non decipiatur; sed quod saepius fallat, solaque abstinentia sine ullo perieulo medeatitur: cum praesertim etiam pro modo terroris moderari lieeat; et si leviora indicia fuerint, satis sit a vino tantum abstinere, quod subtractum plus, quam si eib[us] quid dematur, adjuvat: si paulo graviora, facile sit non aquam tantum bibere, sed etiam eib[us] carnem subtrahere; interdum panis quoque minus, quam pro consuetudine assumere, humidoque eib[us] esse contentum, et olere potissimum: satisque sit, tum ex toto a cibo, a vino, ab omni motu corporis abstinere, eum vehementes notae terruerunt.

Neque dubium est, quin vix quisquam, qui non dissimulavit, sed per haec mature morbo ocurrerit, ægrotet.

ORDO.

iustans discutitur per haec. Non quod id non ineidat interdum, aut non decipiatur; sed quod, fallat saepius, que abstinentia sola medeatur sine illo periculo: praesertim cum etiam lieeat moderari pro modo terroris; et si indicia fuerint leviora, sit satis tantum abstinere a vino, quod subtractum adjuvat plus, quam si quid dematur eib[us]; si paulo graviora, sit facile non tantum bibere aquam, sed etiam subtrahere carnem cibo; interdum quoque assumere minus panis, quam pro consuetudine, que esse contentum humidum cibo, et potissimum olere: que sit satis, tum ex toto abstinere a eib[us], a vino, ab omni motu corporis, cum vehementes notae terruerunt.

Neque est dubium, quin vix quisquam ægrotet, qui non dissimulavit, sed occurrit morbo mature per haec.

TRANSLATION.

of fear be removed. For by these means, a severe, impending disease is averted. Many persons are deceived, while they flatter themselves that the languor has been dissipated either by exercise on the first day, or by a bath, by purging, by vomiting, or by perspiration, or by wine. Not because that does not sometimes happen, or may not deceive, but very often it is fallacious, while abstinence alone may effect a cure without any danger: especially as this may be proportioned to the alarm; and if the symptoms be slight, it may be sufficient to abstain from wine only, which being withdrawn, assists more, than if some portion had been taken from the food; if the accessions be a little more severe, it will be easy, not only to drink water, but to withhold flesh also from the food: sometimes it will be necessary for him to take less bread than usual, and to be content with moist food, and more particularly with vegetables: and when violent symptoms have given the alarm, it may be sufficient then, to abstain entirely from food, wine, and every corporal exercise.

Neither can it be doubted, that scarcely any one falls ill, who has not disregarded these means, or those who have in due time opposed the disease by them.

CAP. III.

DE FEBRIUM GENERIBUS.

ATQUE hæc quidem sanis facienda sunt, tantum causam metuentibus. Sequitur vero curatio febrium, quod et in toto corpore, et vulgare maxime morbi genus est.

Ex his una quotidiana, altera tertiana, altera quartana est: interdum etiam longiore circuitu quædam redunt; sed id raro fit. In prioribus, et morbi sunt, et medicina.

Et quartanæ quidem simpliciores sunt. Incipiunt fere ab horrore; deinde calor erumpit; finitaque febre biduum integrum est: ita quarto die revertitur. Tertianarum vero duo genera sunt. Alterum eodem modo, quo quartana, et incipiens, et desinens; illo tantum interposito discrimine, quod unum diem præstat integrum, tertio reddit. Alterum longe perniciosius, quod tertio quidem die revertitur, ex octo autem et quadraginta horis fere sex et triginta per accessionem occupat, interdum etiam

CHAP. III.

OF THE SPECIES OF FEVERS

Now these cantions are to be attended to by persons in health, only apprehensive of illness. But now we come to the treatuent of fevers, a genus of diseases not only occupying the whole body, but very common.

Of these, one is QUOTIDIAN, another, TERTIAN, and a third QUARTAN: sometimes indeed they run a louger circuit, but that happens rarely. Under the former are comprehended, both the diseases and their treatment.

Now the quartan fevers indeed are the more simple. They begin generally with shivering, then a heat breaks out; and the paroxysm being over the patient is free for two days: and thus it returns on the fourth day. But there are two kinds of the tertians. The one hath beginning and terminating like the quartan; with this distinction only, that there is one clear day, interposing, and returns on the third. The other is by far more dangerous, because it returns indeed on the third day, but out of forty-eight hours, it occupies thirty-six of these in the paroxysm, some-

vel minus, vel plus; neque ex toto in remissione desistit, sed tantum levius est. Id genus plerique medici *ἡμιτριταῖον* appellant.

Quotidianæ vero variæ sunt, et multiplices. Aliæ enim protinus a calore incipiunt, aliæ a frigore, aliæ ab horrore. Frigus voco, ubi extremæ partes membrorum inalgescunt: horrorem, ubi totum corpus intremit. Rursus aliæ sic desinunt, ut ex toto sequatur integritas: aliæ sic, ut aliquantum quidem minuantur ex febre, nihilominus tamen quædam reliquæ remaneant, donec altera accessio accedat: ac sœpe aliæ vix quidquam aut nihil remittant, sed ita continent.

Deinde, aliæ fervorem ingentem habent, aliæ tolerabilem: aliæ quotidie pares sunt, aliæ impares; atque invicem altero die leniores, altero vehementiores: aliæ tempore eodem postridie revertuntur, aliæ vel serius vel celerius: aliæ diem noctemque accessione et decessione implet, aliæ minus, aliæ plus: aliæ, cum decadunt, sudorem movent, aliæ non movent; atque alias per sudorem ad integratem venitur, alias corpus tantum imbecillius redditur.

Accessiones etiam, modo singulæ singulis diebus fiunt, modo binæ plu-

ORDO.

minus vel plus; neque desistit ex toto in remissione, sed tantum est levius. Plerique medici appellant id genus *ἡμιτριταῖον* (semitemtiana).

Vero quotidianæ sunt variæ, et multiplices. Enim aliae incipiunt protinus a calore, aliae a frigore, aliae ab horrore. Voco frigus, ubi extremæ partes membrorum inalgescunt: horrorem, ubi totum corpus intremit. Rursus aliae desinunt sic, ut integratas sequatur ex toto: aliæ sic, ut aliquantum quidem minuantur ex febre, tamen nihilominus quædam reliquæ remaneant, donec altera accessio accedat: ac sœpe aliae remittant vix quidquam aut nihil, sed ita ut continguunt.

Deinde aliae habent ingentem fervorem, aliæ tolerabilem: aliæ sunt pares quotidie, aliæ impares, atque invicem leniores altero die, vehementiores alteri: aliæ revertuntur eodem tempore postridie, aliæ vel serius vel celerius: aliæ implet diem que noetem accessione et decessione, aliæ minus, aliæ plus: aliæ, cum decadunt, movent sudorem, aliæ non movent; atque alias venitur ad integratam per sudorem, alias corpus redditur imbecillius tantum.

Etiam acessiones modo fiunt singulæ singulis diebus, modo binæ ve plures concurrunt: ex

TRANSLATION.

times less or more; nor does it cease entirely in the remission, but is only mitigated. Most physicians call that genus the semi-tertian.

But the quotidiants are various and multiplex. For some begin at once with heat, others with cold, others with shivering. I call that cold, when the extreme parts of the limbs become cold: a shivering when the whole body trembles. Again some cease so, that a healthy intermission follows: others so, that although there be some diminution of the fever, yet nevertheless some relapses remain, until another accession comes on: and very often, others remit scarcely any thing, or none at all, but continue so.

Others again, have excessive heat, some more tolerable: some have similar, others dissimilar paroxysms daily; and alternately gentler on one day, more violent on another: some return at the same time on the following day, others either sooner or later: some complete a day and night in the accession and decession, some less, others more: some terminate by perspiration, others do not: and at one time a free intermission ensues perspiration, at another time it leaves the body weaker. Sometimes the paroxysms take place singly, at other times two,

resve concurrunt: ex quo saepe evenit, ut quotidie plures accessiones remissionsque sint; sic tamen, ut unaquaque alicui priori respondeat. Interdum vero accessiones quoque confunduntur, sic, ut notari neque tempora earum, neque spatia possint.

Neque verum est, quod dicitur a quibusdam, nullam febrem inordinatam esse, nisi aut ex vomica, aut ex inflammatione, aut ex ulcerre: facilior enim semper curatio foret, si hoc verum esset. Sed quod evidentes causae faciunt, facere etiam abditæ possunt.

Neque de re, sed de verbo controversiam movent, qui, cum aliter aliterque in eodem morbo febres accedunt, non easdem inordinate redire, sed alias aliasque subinde oriri dicunt. Quod tamen ad curandi rationem nihil pertineret, etiamsi vere diceretur. Tempora quoque remissionum modo liberalia, modo vix ulla sunt.

ORDO.

quo evenit saepe, ut sint plures accessiones que remissions quotidie: sic tamen, ut unaquaque respondeat alieni priori. Vero interdum quoque accessiones confunduntur, sie ut neque tempora, neque spatia earum possint notari.

TRANSLATION.

or even more occur: whence it happens, that there may be several accessiones and remissions daily: yet in such a manner that each accession corresponds with the preceding one. But sometimes the paroxysms are so confounded, that neither their time nor duration can be observed.

Neither is that true which is related by some persons, that no fever is irregular, unless there be vomica, or inflammation, or an ulcer: for the treatment would be always more easy, if this were true. But that which is produced by evident causes, may also be the result of latent.

Nor do they provoke a controversy concerning the matter itself, but about words only, who, maintain that when fevers return sometimes one way, sometimes another, in the same disease, that they are not the erratic returns of the same fever, but various others successively arising; which however would avail nothing to the mode of treatment, even if true. Also the remissions are sometimes considerable, sometimes scarcely any.

CAP. IV.

DE CURATIONUM DIVERSIS GENERIBUS.

ET febrium quidem ratio maxime talis est. Curationum vero diversa genera sunt, prout auctores aliquos habent. Asclepiades officium esse medici dicit, ut tuto, ut eeleriter, ut jucunde euret. Id votum est: sed fere periculosa esse nimia et festinatio et voluptas solet. Qua vero moderatione utendum sit, ut quantum fieri potest, omnia ista contingent, prima semper habita salute, in ipsis partibus curationum considerandum erit.

Et ante omnia quæritur, primis diebus æger qua ratione continentus sit. Antiqui, medicamentis quibusdam datis, concoctionem moliebantur; eo quod cruditatem maxime horrebat: deinde eam materiam, quæ lædere videbatur, ducendo sæpius alvum subtrahebant. Asclepiades medicamenta sustulit; alvum non toties, sed fere tamen in omni morbo, subduxit: febre vero ipsa præ-

CHAP. IV.

THE DIFFERENT MODES OF TREATMENT.

SUCH then is the general character of fevers. But there are various modes of treatment, according to the doctrine promulgated by various authors. Asclepiades says that it is the duty of a physician to cure his patient safely, speedily, and pleasantly. That is to be wished: but generally too much haste, and too great indulgence, are usually dangerous. But the treatment to be adopted, in order to obtain all those blessings, as far as it can be done, the safety of the patient being always held the principal essential, will be considered when we speak of the cures themselves.

First of all, let us inquire how the patient is to be restrained on the first days of the disease. The ancients essayed to effect concoction by administering certain medicines; for this reason, that they were much alarmed at crudity; afterwards they abstracted the matter which appeared to be the offending cause, by frequent enemas. Asclepiades withheld medicine; but he prescribed clysters in every disease although not so often; but he professed to use the fever itself as its own

cipue se ad remedium uti professus est. Convellendas enim vires ægri putavit, lñee, vigilia, siti ingenti, sic, ut ne os quidem primis diebus elui sineret. Quo magis falluntur, qui per omnia jueundam ejus disciplinam esse concipiunt. Is enim ulterioribus quidem diebus cùbantis etiam luxuriæ subscrispsit; primis vero tortoris vicem exhibuit.

Ego autem, medicamentorum dari potionis, et alvum duci non nisi raro debere, eoneedo: et id non ideo tamen agendum, ut ægri vires convellantur, existimo; quoniam ex imbecillitate sumnum periculum est. Minui ergo tantum materiam superantem oportet, quæ naturaliter digeritur, ubi nihil novi accedit. Itaque abstinentius a cibo primis diebus est, in luce habendus æger, nisi infirmus, interdiu est, quoniam corpus ista quoque digerit; isque cubare quam maximo eonclavi debet. Quod ad sitim vero somnumque pertinet, moderandum est, ut interdiu vigilet, noctu, si fieri potest, conquicseat: ac neque potet, neque nimium siti crueietur. Os etiam ejus elui potest, ubi et siecum est, et ipsi fœtet; quamvis id tempus aptum potionis non est. Commodeque Erasis-

ORDO.

Enim putavit vires ægri convellendas luce, vigilia, ingenti siti, sic, ut sineret nequidem os chi primis diebus. Quo falluntur magis, qui concipiunt disciplinam ejus esse jueundam per omnia. Enim is quidem ulterioribus diebus subscrispsit etiam luxuriæ cùbantis; vero primis exhibuit vicem tortoris.

Autem ego concedo potionis medicamentorum debere dari, et alvum duci non nisi raro: et tamen existimo id non agendum id co, ut vires ægri convellantur; quoniam est summum periculum ex imbecillitate. Ergo oportet tantum superantem materiam minoi, quæ digeritur naturaliter, ubi nihil novi accedit. Itaque æger est abstinentius a cibo primis diebus, est habendus in luce interdiu, nisi infirmus, quoniam ista quoque digerit corpus: que is debet enbare conlaci quan maximo. Vero quod pertinet ad sitim, que somnum, est moderandum, ut vigilet interdiu; conquiescat noctu, si potest fieri: ac neque potet, neque crucietur nimium siti. Etiam ejus os potest elui, et ubi est siccum, et fœtet ipsi; quamvis id tempus nou est aptum potionis. Que Erasistratus

TRANSLATION.

principal remedy. He imagined, that the strength of the patient ought to be reduced by light, watching, and intense thirst, so, that he would not even suffer the mouth to be washed on the first days. Therefore they are the more deceived, who believe his practice to have been pleasant in every respect. In the more advanced stage he even permitted the patient to indulge in luxuries, but at the commencement he acted the part of a torturer.

Now I concede, that medicinal potions, and injections ought to be given but sparingly: and yet I think, that this ought not to be done, in order to reduce the patient's strength; because in this there is the greatest danger. Therefore it is only necessary to diminish the superabundant material, which is naturally dispersed, when there is no new accession to it. For this reason the patient must abstain from food on the first days, to be kept in the light during the day, unless he be infirm, because that also wastes the body; and he ought to be in a very spacious chamber. But what pertains to thirst and sleep, it must be so regulated, that he may be awake in the day time, and sleep by night if possible: and neither to drink too much, nor to be tormented by too much thirst. His mouth may be rinsed out, both when it is dry and when there is a fœtid taste in it; although it be not a seasonable time for drinking. Erasistratus has very appropriately said, that

tratus dixit, saepc, interiore parte humorem non requirente, os et fauces requirere; neque ad rem, male haberri aegrum, pertinere.

Ac primo quidem sic tenendus est. Optimum vero medicamentum est, opportune cibus datus: qui quando primum dari debeat, quaeritur. Plerique ex antiquis tarde dabant, saepc quinto die, saepc sexto: et id fortasse vel in Asia, vel in Ægypto, cœli ratio patitur. Aselepiades, ubi aegrum triduo per omnia fatigaverat, quarto die cibo destinabat. At Themison nuper, non quando coepisset febris, sed quando desisset, aut certe levata esset, considerabat; et ab illo tempore exspectato die tertio, si non accesserat febris, statim: si accesserat, ubi ea vel desierat, vel, si assidue inhærebat, certe si se inclinaverat, eibum dabat. Nihil autem horum utique perpetuum est. Nam potest primo die primus cibus dandus esse, potest secundo, potest tertio, potest non nisi quarto, aut quinto; potest post unam accessionem, potest post duas, potest post plures. Refert enim, qualis morbus sit, quale corpus, quale cœlum, quæ ætas, quod tempus anni: minimeque, in rebus multum inter se differentibus, perpetuum esse præceptum temporis potest.

ORDO.
dixit commode, os et fauces saepc requirere humorem, interiore parte non requirente; neque pertinere ad rem, aegrum haberri male.

Ac primo quidem est tenendus sic. Vero optimum medicamentum est, cibus opportune datus; qui quando debeat primum dari, quaeritur. Plerique ex antiquis dabant cibum tarde, saepc quinto die, saepc sexto; et fortasse ratio cœli vel in Asia, vel in Ægypto, patitur id. Ubi Aselepiades fatigaverat aegrum per omnia triduo, destinabat quarto die cibo. At nuper Themison considerabat, non quando febris coepisset, sed quando desisset, aut certe esset levata; et tertio die ab illo tempore exspectato, dabat cibum, statim, si febris non accesserat; si accesserat ubi ea vel desierat, vel si inhærebat assidue, certe si inclinaverat se. Autem nihil horum est utique perpetuum. Nam primus eibus potest esse dandus primo die, potest secundo, non potest nisi quarto aut quinto; potest post unam accessionem, potest post duas, potest post plures. Eniñ refert, qualis morbus sit, quale corpus, quale cœlum, quæ ætas, quod tempus anni, que in rebus differentibus multum inter se, præceptum temporis potest minime esse perpetuum. In

TRANSLATION.

the mouth and fauces often require moisture, when the interior parts (*of the body*) do not want it; neither can it be advantageous to the patient to be maltreated.

Such then ought to be the management at first. BUT THE BEST MEDICINE IS, FOOD SEASONABLY GIVEN: the question is, when must that be given. Most of the ancients gave it late, often on the fifth or sixth day; and perhaps the nature of the climate in Asia or in Egypt admits of that practice. When Aselepiades had exhausted the patient in every way, he allowed him food on the fourth day. But Themison lately, did not regard when the fever had begun, but when it ceased, or at least was relieved; and having waited for the third day from that time, he gave food immediately, if the fever had not ceased; if it had, then when it either had ceased, or if it did continue constantly, at least when it was mitigated. But neither of these rules is infallible. For it may be necessary to give food on the first day, or on the second, or on the third, or not until the fourth or fifth: it may be given after one paroxysm, or after two, or after several. For the nature of the disease, constitution, climate, age, and season of the year will make some difference: for in things differing so much from each other, no fixed time, much less can an invariable principle be laid down. In that disease which consumes the

strength so much, food must be given earlier : and in that climate also which has a more decomposing tendency : and for this reason, in Africa, the patient seems very properly withheld from food on no day. It ought to be given to a boy earlier than to a young man ; in summer, sooner than in winter.

There is one thing which ought to be observed at all times, and in all places ; the assiduous physician should frequently inspect the vital powers of the patient, and as long as they abound, he may combat the disease by abstinence ; but if he begin to apprehend weakness, then he may allow nourishment. For it is his duty to exonerate his patient, if there be superfluous material, or to support him, if there be weakness from hunger. I find also in Erasistratus, who, although he has taught us but little, when the bowels and the body itself should be depleted, yet by saying that these things ought to be attended to, and that food ought to be given then, when the body stood in need of it, has evidently shewn, that it ought not to be given, while the strength abounds, still, he advises to guard against a deficiency.

From these considerations it may be inferred, that many patients cannot be attended by one physician : and that he is the most fit, if he be skilful in his art, who does not depart much from his patient. But those who are subservient for (*base*) gain, because that is greater in proportion to the number of people whom they attend, willingly embrace those precepts, which do not exact sedulous attend-

ut in hae ipsa re. Facile est enim dies vel acessiones numerare iis quoque, qui ægrum raro vident: ille assideat necesse est, qui, quod solum opus est, visurus est, quando nimis imbecillus futurus sit, nisi eibum aeeperit. In pluribus tamen ad initium eibi dies quartus aptissimus esse eonsuevit.

Est autem alia etiam de diebus ipsis dubitatio; quoniam antiqui potissimum impares sequebantur, eosque, tamquam tune de ægris judicaretur, *ηρισίμους* nominabant. His erat dies tertius, quintus, septimus, nonus, undecimus, quartusdecimus, unus et vicesimus; ita ut summa potentia septimo, deinde quarto-decimo, deinde uni et vicesimo daretur. Igitur sic ægros nutriebant, ut dierum imparium acessiones exspectarent; deinde postea eibum, quasi levioribus acessionibus instantibus, darent: adeo ut Hippocrates, si alio die febris desisset, reecidivam timere sit solitus.

Id Aselepiades jure ut vanum repudiavit; neque in ullo die, quia par imparve esset, iis vel majus vel miuus perieulum esse dixit. Interdum enim pejores dies pares fiunt; et opportunius

re ipsa. Enim est facile quoque iis qui raro vident ægrum numerare dies vel acessiones: est necesse ille assideat, qui est visurus, quod est solum opus, quando sit futurus nimis imbecillus, nisi acceperit eibum. Tamen in plurimis, quartus dics consuevit esse aptissimus ad initium cibi.

Autem est alia dubitatio etiam de diebus ipsis: quoniam antiqui sequebantur potissimum impares: que nominabant eos *χρισίμους* (chrisimous), tanquam judicaretur tunc de ægris. His erat, tertius dies, quintus, septimus, nonus, undecimus, quartusdecimus, unius et vicesimus; ita, ut summa potentia daretur septimo, deinde quarto decimo, deinde uniuerso et vicesimo. Igitur natriebant ægros sic, ut exspectarent acessiones imparium dierum: deinde postea darent cibum, quasi levioribus acessionibus instantibus: adeo ut Hippocrates, si febris desisset alio die, solitus sit timere reecidivam.

Asclepiades repudiavit jure id ut vanum; que dixit ne esse vel maius vel minus periculum iis in ullo die, quia, esset par vel imparve. Enim interdum pares dies fiunt pejores, et cibus datur op-

TRANSLATION.

ance; as in this case itself. For it is easy even to those, who seldom see the sick to enumerate the days and the acessiones: but he who would form a correct judgement, would do well to attend diligently, which is the most essential part, that he may see when it shall be necessary to administer food, lest his patient become too weak. Yet in most cases the fourth day is usually the fittest for the commencement of food.

But there is yet another doubt concerning the days themselves; for the ancients principally observed the odd days, and termed them *critical*, as if on these, a prognosis could be formed concerning the recovery of the sick. These days were, the third, the fifth, the seventh, the ninth, the eleventh, the fourteenth, and twenty-first; so that the greatest influence might be attributed to the seventh, the fourteenth, and then to the twenty-first. Therefore they nourished the sick in such a manner, that they waited for the acessiones of the unequal days: then they gave food, as if at this period they anticipated milder acessiones. So that even Hippocrates, was accustomed to fear a relapse, if the fever disappeared on any other day.

Asclepiades justly repudiated this as vain, and maintained that no day was more or less dangerous to the patient, by its being even or odd. For sometimes the even days happen to be the worst; and food is given more seasonably after

post eorum accessiones cibus datur. Nonnumquam etiam in ipso morbo diarium ratio mutatur; fitque gravior, qui remissior esse consueverat. Atque ipse quartusdecimus par est, in quo esse magnam vim antiqui fatebantur. Qui cum octavum primi naturam habere contenderent, ut ab eo secundus septenarius inciperet, ipsi sibi repugnabant, non octavum, neque decimum, neque duodecimum diem sumendo, quasi potentiores: plus enim tribuebant nono, et undecimo. Quod cum fecissent sine ulla probabili ratione, ab undecimo, non ad tertiumdecimum, sed ad quartumdecimum transibant. Est etiam apud Hippocratem, ei, quem septimus dies liberatus sit, quartum esse gravissimum. Ita, illo quoque auctore, in die pari et gravior febris esse potest, et certa futuri nota.

Atque idem alio loco quartum quemque diem, ut in utrumque efficacissimum apprehendit; id est quartum, septimum, undecimum, quartumdecimum, decimumseptimum. In quo et ab imparis ad paris rationem transit, et ne hoc quidem propositum conservavit; cum a septimo die undecimus, non quartus, sed quintus sit. Adeo apparent,

portunius post accessiones eorum. Etiam nonnumquam in morbo ipso ratio dicrum mutantur; que fit gravior, qui consueverat esse remissior. Atque quartusdecimus ipse, in quo antiqui fatebantur magnam vim esse, est par. Qui cum contenderent octavum habere naturam primi, ut secundus septenarius inciperet ab eo, ipsi repugnabant sibi non sumendo octavum, neque deeminum, neque duodecimum diem, quasi potentiores: enim tribuebant plus nono et undecimo. Quod cum fecissent sine ulla probabili ratione ab undecima transibant, non ad tertiumdecimum, sed ad quartumdecimum. Etiam est apud Hippocratem, quartum esse gravissimum ei quem septimus dies sit liberatus. Ita quoque illo auctore, et febris potest esse gravior in pari die et certa nota futuri.

Atque idem alio loco apprehendit, quemque quartum diem, ut efficacissimum in utrumque: id est, quartum, septimum, undecimum, quartumdecimum, decimumseptimum. In quo transit ab imparis ad rationem paris, et ne quidem, conservavit hoc propositum: cum undecimus non sit quartus, sed quintus a septimo die. Adeo appareat, quacum-

TRANSLATION.

their accessions. Sometimes also the order of the days is changed in the same disease; and that day becomes more severe, which had been accustomed to be more mild. But the fourteenth itself, which the ancients confessed to be highly critical, is an even day. Who, when they contended that the eighth day partook of the nature of the first, because, the second septenary begins from that, they contradict themselves, by not taking the eighth, nor the tenth, nor the twelfth day as the more influential: for they attributed importance to the ninth and eleventh. Which, when they had done this without any plausible reason, they passed over from the eleventh, not to the thirteenth, but to the fourteenth. Hippocrates observed the fourth day to be more severe on that sufferer, who was about to be relieved on the seventh. So that even on his authority, the fever may be more severe on an even day, and a certain prognostic of the future may be furnished.

The same author in another place considered every fourth day as highly important with regard to each event; that is, the fourth, the seventh, the eleventh, the fourteenth, and the seventeenth: in which he passes from the odd to the even, neither in this has he maintained his proposition; since the eleventh does not happen to be the fourth, but the fifth day from the seventh. Therefore in whatever

quaeumque ratione ad numerum respexerimus, nihil rationis, sub illo quidem auctore, reperi. Verum in his quidem antiquos tune celebres admodum Pythagoricei numeri fecellerunt: cum hie quoque medieus non numerare dies debeat, sed ipsas acessiones intueri; et ex his coniectare, quando dandus eis sit.

Illud autem magis ad rem pertinet, seire, tun oporteat dari, eum jam bene venæ conqueverunt, an etiamnum manentibus reliquiis febris. Antiqui enim quam integerrimis corporibus alimentum offerebant: Aselepiades, in clinata quidem febre, sed adhuc tamen inhærente. In quo vanam rationem seeutus est: non quod non sit interdum maturius eis dandus, si mature timetur altera acessionis; sed quod scilicet quam sanissimo dari debeat: minus enim corrumperit, quod integro corpori infertur. Neque tamen verum est, quod Themisoni videbatur, si duabus horis integer futurus esset æger, satius esse tum dare; ut ab integro corpore potissimum diduceretur. Nam si didue tam celeriter posset, id esset optimum: sed eum hoc breve tempus non præstet, satius est, principia eibi a decedente febre, quam

TRANSLATION.

manner we regard his calculations, no sound reasoning is to be found in his theory. But indeed at that time the Pythagorean numbers being very celebrated, deceived the ancients, whereas in this, the physician ought not to number the days, but to watch the paroxysms themselves; and from these alone, form his judgement when food may be given.

But this is of more importance to know, whether it ought to be given when the veins (*arteries*) have become completely tranquillized, or while some reliefs of fever yet remain. The ancients indeed administered aliment to patients in the soundest state possible: Aselepiades (*gave food*) when the fever began to decline, but was still remaining. In which he followed a vain theory: not that food may not be given sometimes more early, if another acession be apprehended soon; but because it ought to be given to the patient in the most healthy state possible: for that is less liable to be vitiated which is introduced into a sound body. Nor is it true which Themison proposed, that if the patient were about to have an intermission of two hours, it would be preferable to give food then; that it might be digested by the body during the absence of fever. For if it could be assimilated with so much celerity, it were best; but since this brevity of space cannot effect that, it is better that food should be commenced, when the fever abates, in order

reliquias ab incipiente excipi. Ita, si longius tempus secundum est, quam integrerrimo dandus est; si breve, etiam antequam ex toto integer fiat.

Quo loco vero integritas est, codem est remissio, quæ maxima in febre continua potest esse. Atque hoc quoque quæritur, utrum tot horæ exspectandæ sint, quot febrem habuerunt; an satis sit, primam partem earum præteriri, ut ægris jucundius insidat, quibus interdum non vacat. Tuttissimum est autem, ante totius accessionis tempus præterire: quamvis, ubi longa febris fuit, potest indulgeri ægro maturius, dum tamen ante minimum pars dimidia prætereatur. Idque non in ea sola febre, de qua proxime dictum est, sed in omnibus ita servandum est.

ORDO.

ab incipiente. Ita si secundum tempus est longius, est dandus quam integrerrimo; si breve, etiam antequam fiat ex toto integer.

Vero quo loco integritas est, codem remissio est, quæ potest esse maxima in continua febre. Atque hoc quoque quæritur, utrum tot horæ sint exspectandæ, quot habuerunt febrem: an sit satis primam partem earum præteriri, ut insidat jucundius ægris, quibus interdum non vacat. Autem est tutissimum tempus totius accessionis præterire ante: quamvis, ubi febris fuit longa, potest indulgeri ægro maturius, dum tamen minimam dimidia pars prætereatur ante. Que id est servandum, ita non in ea febre sola, de qua dietum est proxime, sed in omnibus.

TRANSLATION.

that digestion may be accomplished, before the next accession comes on. Thus, if the intermission be very long, food is to be given to the patient when he is most free from fever; if short, even before the cessation of the paroxysm.

But at what time the sound interval takes place, that is the remission, which may be of considerable duration in a continued fever. But there is another question; whether we should wait so many hours as have been occupied by the fever; or, whether it may be sufficient for the first few hours to be passed over, that it may settle more pleasantly with those patients whose intermissions are sometimes short. But it is the safest, for the whole of the paroxysm to pass over first, although, when the accession has been long, the patient may be indulged a little earlier, on condition that at least one half of the time be passed. These things are to be observed so, not only in such fevers as we have been just treating of, but in all others.

CAP. V.

DE FEBRIUM SPECIEBUS, ET SINGULARUM CURATIONIBUS: ET PRIMO,
QUANDO CIBUS FEBRICITANTIBUS DANDUS SIT.

CHAP. V.

THE TREATMENT OF EACH SPECIE OF FEVER, AND THE TIMES OF GIVING FOOD.

THESE observations are more applicable to all kinds of fevers: I shall now proceed to their several species. Therefore, if there have been but one accession only, which has afterwards ceased, and this has been excited either by a disease (1) of the groin, or from lassitude, or from heat, or any similar cause, so that the apprehension does not proceed from some internal cause, on the following day, when the time of the accession has passed over without any sensible disturbance, food may be given. But if the heat originate from some deep hidden cause, and a heaviness either of the head or præcordia follow, and there be no apparent cause for the disturbance of the body; although appyrexia have succeeded one accession; yet because a tertian may be feared, we must wait for the third day: and when the time of the accession has passed, food may be given, but sparingly; because a quartan also may be dreaded: but if the body at last be free from fever on

est, eo cum fiducia utendum. Si vero postero, tertiove, aut quarto die secura febris est; scire liet, morbum esse.

Sed tertianarum, quartanarumque, quarum et certus eireuitus est, et finis integer, et liberaliter quieta tempora sunt, expeditior ratio est: de quibus suo loco dicam. Nune vero eas explicabo, quae quotidie urgent. Igitur tertio quoque die eibus ægro commodissime datur: ut alter febrem minuat, alter viribus subveniat. Sed is dari debet, si quotidiana febris est, quæ ex toto desinat, simul atque corpus integrum factum est: si quamvis non accessiones, febres tamen junguntur, et quotidie quidem inereseunt, sed sine integritate tamen remittunt, eum corpus ita se habet, ut major remissio non expectetur: si altero die gravior, altero levior accessione est, post graviorem. Fere vero graviorem accessionem levior nox sequitur: quo fit, ut graviorem accessionem nox quoque tristior antecedat.

At si continuatur febris, neque levior cumquam fit, et dari eibum necesse est, quando dari debeat, magna dissensio est. Quidam, quia fere remissius ma-

ORDO.

ntendim eo cum fiducia. Vero si febris secura est postero, ve tertio, aut quarto die, liet seire esse morbum.

Sed ratio tertianarum, que quartanarum est expeditior, quarum est et certus circuitus, et integer finis et tempora, sunt liberaliter quieta: de quibus dicam suo loco. Vero nunc explicabo eas quæ urgent quotidie. Igitur quoque cibus datur ægro commodissime tertio die: ut alter minuat febrem, alter subveniat viribus. Sed si est quotidiana febris, quæ desinat ex toto, is dari, simul atque corpus factum est integrum: si quamvis non accessiones, tamen febres junguntur, et quidem inerescunt quotidie, sed tamen remittunt sine integritate, eum corpus habet se ita, ut major remissio non expectetur: si accessione est gravior altero die, levior altero, post graviorem. Vero fere levior nox sequitur graviorem accessionem: quo fit, ut quoque tristior nox antecedit graviorem accessionem.

At si febris continuatur, neque unquam fit levior, et est necesse cibum dari, est magna dissensio quando debeat dari. Quia matutina tempus est fere remissius

TRANSLATION.

the fourth day, food may be given with confidence. But if fever have followed on the next, or on the third, or fourth day, we may conclude it to be a disease.

Now the treatment of those tertians, and quartans is more easy, whose circuit is certain, the terminations healthy, and there are ample and quiet intermissions; of which I shall speak in their proper place. But at present I shall explain those fevers which return with daily exacerbation. Therefore in these, it is better to give food every third day: that the intervening day may abate the fever, the other support the strength. But if it be a quotidian, and cease entirely, food ought to be given as soon as the body becomes sound: for although there be not accessions immediately succeeding each other, yet they are connected, and increase daily; still they remit without a free interval, then food must be given, when the body is in that state, when it has got over the greater exacerbation: if the accession be more severe on one day, and milder on another, then let him have food after the more severe accession: whence it happens also, that a more restless night precedes a severe fit.

But if the fever be continued, and there be no mitigation, and there be a necessity for giving food, as to when this should be given, there is much difference of opinion.

tutinum tempus ægris est, tum putant dandum. Quod si respondet, non quia mane est, sed quia remissio est ægris, dari debet. Si vero ne tune quidem ulla requies ægris est, hoe ipso pejus id tempus est, quod cum sua natura melius esse debeat, morbi vitio non est: simulque insequitur tempus meridianum, a quo eum omnis æger fere pejor fiat, timeri potest, ne ille magis etiam, quam ex consuetudine, urgeatur. Igitur alii vespere tali ægro cibum dant. Sed eum eo tempore fere pessimi sint, qui ægrotant, verendum est, ne, si quid tune moverimus, fiat aliquid asperius. Ob hæc ad medianam noctem deeturro; id est finito jam gravissimo tempore, eodemque longissime distante: secturis vero antelueanis horis, quibus omnes fere maxime dormiunt; deinde matutino tempore, quod natura sua levissimum est.

Si vero febres vagæ sunt, quia verendum est, ne eibum statim subsequantur, quandoeumque quis ex accessione levatus est, tune debet assumere. At si plures acessiones eodem die veniunt, considerare oportet, pares ne per omnia sint, quod vix fieri potest, an impares.

ORDO.

ægris, quidam putant dandum tuue. Quo si respondet, debet dati, non quia est mane, sed quia est remissio ægris. Vero si nequidem est ulla reqnies ægris tune, id tempus est hoe ipso pejus, quod cum sua natura debeat esse melius, non est vitio morbi: que simul meridianum tempus insequitur, a quo cum omnis æger fere fiat pejor potest timeri, ne ille urgeatur etiam magis, quam ex consuetudine. Igitur alii dant cibum tali ægro, vespere. Sed eum, qui ægrotant, sint ferr pessimi eo tempore, est verendum ne, si moverimus quid tune, aliquid fiat asperius. Ob hæc decurro ad medianam noctem; id est, gravissimo tempore jam finito, que longissime distante: vero horis ante lueanis secturis, quibus fere omnes dormiunt maxime; deinde matutino tempore, quod sua natura est levissimum.

Vero si febres sunt vagæ, quia est verendum ne subsequantur statim cibum, quandoeunque quis levatus est ex accessione, tune debet assumere. At si plures acessiones veniunt codem die, oportet considerare ne sint pares per omnia, quod vix potest fieri, an impares. Si sunt pares

TRANSLATION.

Because the morning is for the most part easier to the patient, some think food ought to be given then. But if it succeed, it ought to be given, not because it is morning, but because there is a remission then. But if there be no mitigation then, that time is so much the worse, because, by its own nature, it ought to be better, yet owing to the malignancy of the disease it is not so: after this follows the meridian, after which, every patient becomes worse, it may be apprehended, that the patient may become worse than usual. Therefore some give food to such a patient in the evening: but since sick people are generally worse at that time, it is to be dreaded, lest by exciting any commotion, an aggravation of the disease may be the consequence. For these reasons, I defer it till midnight; that is, the evening exacerbation being over, and the next being at the greatest distance possible: and now the hours before dawn being about to follow, during which most people sleep sound; afterwards the morning, which is naturally the most favourable.

But if the accessions be erratic, for in such a case there is reason to apprehend, lest they follow immediately on food, then the patient ought to take food whenever he has been released from a paroxysm. But if several accessions come on the same day, it is necessary to consider whether they be similar during the whole

Si per omnia pares sunt, post eam potius accessionem cibus dari debet, quae non inter meridiem et vesperem desinit: si impares sunt, considerandum est, quo distent. Nam si altera gravior, altera levior est, post graviorem dari debet: si altera longior, altera brevior, post longiore: si altera gravior, altera longior est, considerandum est, utra magis affligat, illa vi, an haec tempore, et post eam dandus est. Sed plane plurimum interest, quantæ qualesque inter eas remissiones sint. Nam si post alteram febrem motio manet, post alteram integrum corpus est, integro corpore, cibo tempus aptius est.

Si semper febricula manet, sed alterum tamen longius tempus remissionis est, id potius eligendum est; adeo ut, ubi accessiones continuantur, protinus, inclinata priore, dandus cibus sit. Et enim perpetuum est, ad quod omne consilium dirigi potest; cibum quam maxime semper ab accessione futura reducere; et, hoc salvo, dare quam integerrimo corpore. Quod non inter duas tantum, sed etiam inter plures accessiones servabitur. Sed cum sit aptissimum, tertio quoque die cibum dare;

ORDO.

per omnia, cibus debet dari potius post eam accessionem, quæ non desinit inter meridiem et vesperem: si sunt impares, est considerandum quo distent. Nam si altera est gravior, altera levior, debet dari post graviorem: si altera longior, altera brevior, post longiore, si altera est gravior, altera longior, est considerandum utra affligat magis, illa vi, an haec tempore, et est dandus post eam. Sed plane interest plurimum, quantæ que quales remissiones sint inter eas. Nam si motio manet post alteram febrem, corpus est integrum post alteram: aptius est, tempus cibus corpore integro.

Si febricula semper manet, sed tamen alterum tempus remissionis est longius, id est potius eligendum: adeo ut ubi accessiones continuantur, cibus dandus protinus priore inclinata. Enim est perpetuum, ad quod omne consilium potest dirigi, redire cibum semper quam maxime ab accessione futura; et hoc salvo dare, corpore quam integerrimo. Quod servabitur, non tantum inter duas, sed etiam inter plures accessiones. Sed cum sit aptissimum dare cibum quoque tertio

TRANSLATION.

series, (which is scarcely possible) or dissimilar. If they be alike through all, food should be given rather after that accession which does not terminate between mid-day and evening: if they be unlike, then we ought to consider in what the difference consists. For if one be more vehement, the other milder, it ought to be given after the first; if the one should be longer, the other shorter, then after the longer: if the one be more severe, the other longer, then we should consider which of the two affect the patient most, the former by its violence, or the latter by its duration, and to give accordingly. But indeed it is of most importance, how great the remissions may be, and the nature of each, which may take place between the attacks. For if there happen to be any diseased action remaining after one paroxysm, and the body be entirely free after another, then the fittest time to give food is, when the patient is most free.

If a slight fever always remain, yet one remission may be longer than another, that is the most eligible; so that if the accessions be continued, food may be given immediately upon the decline of the first. For it is a perpetual rule, with which every other must coincide, to withhold food at the greatest possible distance from the impending paroxysm; and with this precaution being taken, to give it, when the patient is most free from pyrexia: which must be observed not only after two accessions, but after several. But although it may be very proper to give food

tamen, si corpus infirmum est, quotidie dandus est; multoque magis, si continentes febres sine remissione sunt, quanto magis corpus affligit; aut si duæ pluresve accessiones eodem die veniunt. Quæ res efficit, ut et a primo die protinus cibus dari quotidie debeat, si protinus venæ conciderunt; et sæpius eodem die, si inter pluræ accessiones subinde vis corpori deest. Illud tamen in his servandum est, ut post eas febres minus cibi detur, post quas, si per corpus licet, omnino non daretur.

Cum vero febris instet, incipiat, aug-
eatur, consistat, decedat, deinde in de-
cessione consistat, aut finiatur; scire
licet, optimum cibo tempus esse febre
finita; deinde, cum decessio ejus con-
sistit; tertium, si necesse est, quando-
cumque decedit; cetera omnia pericu-
losa esse. Si tamen propter infirmi-
tatem necessitas urget, satius esse, con-
sistentiæ jam incremento febris, aliquid
offerre, quam incremente; satius esse,
instante, quam incipiente: cum eo ta-
men, ut nullo tempore is, qui deficit,
non sit sustinendus.

Neque hercule satis est, ipsas tantum

TRANSLATION.

every third day; yet if the body be weak, it ought to be given daily; and the more necessary if the fevers be continuous without any remission, by which, the patient is so much the more affected; or, if two or more accessions come on the same day: which circumstance renders it necessary, that food should be given daily from the first day, if the arterial action have subsided in a short time; and repeatedly, on the same day, if the *vis vitæ* be deficient during a succession of many paroxysms. Yet this must be observed in these instructions, that less nourishment is to be given after those paroxysms; whereas, if the physical powers would permit, none at all should be given.

Now as every fever has its approach, onset, progress, acme, or decline, and again becomes stationary, although subdued, or entirely terminated; we may conclude that the best time to give food is when the paroxysm is over; next, when the decline terminates; thirdly, if necessary, whenever it begins to subside; all other times are dangerous. But if weakness urge the necessity, it is preferable to offer something, when the increment of the fever becomes stationary, than when it is increasing; it is better when approaching, than when beginning: yet with this understanding, that there is no time improper for him who is exhausted, in which he may not be sustained.

Nor indeed is it sufficient for the physician to attend only to the fevers them-

corporis habitum, et ad eum dirigere curationem ; seu supersunt vires, seu desunt, seu quidam alii affectus interveniunt. CHAP. VI.

THE TIMES PROPER FOR GIVING DRINK TO THE SICK.

BUT indeed the regulation of food is more easy with patients, for their stomachs generally eject this, even when the mind covets it : but the great struggle is for drink, and the more so, proportioned to the violence of the fever. For this excites thirst, and they require water most, at the very time that it is most dangerous to

est. Sed docendus æger est, ubi febris quieverit, protinus sitim quoque quieturam; longioremque accessionem fore, si quod ei datum fuerit alimentum: ita celerius eum desinere sitire, qui non bibit. Necesse est tamen, quanto facilius etiam sani famem, quam sitim sustinent, tanto magis ægris in potione, quam in cibo indulgere. Sed primo quidem die nullus humor dari debet; nisi subito sie venæ eoneiderunt, ut eibus quoque dari debeat: secundo vero, ceterisque etiam, quibus cibus non dabitur, tamen, si magna sitis urget, potio dari potest.

Ae ne illud quidem, ab Heraelide Tarentino dietum, ratione earet: ubi aut bilis ægrum, aut eruditas male habet, expedire quoque per modicas potionies misseerī novam materiam corruptæ. Illud videndum est, ut qualia tempora eibō leguntur, talia potionī quoque, ubi sine illo datur, deligantur aut cum ægrum dormire eupiemus; quod fere sitis prohibet; satis autem convenit, eum omnibus febricitantibus nimius humor alienus sit, tum præcipue esse fœminis, quæ ex partu in febres ineiderunt.

ORDO.

tosissima. Sed æger est docendus, ubi febris conquiererit, protinus sitim quoque quieturam; que accessionem fore longioram, si quod alimentum datum fuerit ei: ita enim desinere celerius sit re, qui non bibit. Tamen est necesse, quanto facilius etiam sani sustinent famem quam sitim, tanto magis indulgere ægris in potionē quam in cibo. Sed primo die, quidem, nullus humor debet dari, nisi venæ eoneiderunt subito, sic ut cibus quoque debeat dari: vero secundo que etiam ceteris quibus cibus non dabitur, tamen si magna sitis urget, potio potest dari.

Ae ne quidem illud dictum ab Heraelide Tarentino caret ratione. Ubi aut bilis, aut eruditas habet male ægrum, expedire novam materiam miseri corruptæ per modicas potionies. Illud est videndum, ut qualia tempora leguntur cibo, talia quoque diliguntur, potionī, ubi datur sine illo: ant cum eupiemus ægrum dormire: quod fere sitis prohibet. Etiam convenient satis, cum omnis humor sit alienus omnibus febricitantibus, tum præcipue esse fœminis, quæ incidernit in febres ex partu.

TRANSLATION.

them. But the patient must be informed, that when the fever shall have subsided, the thirst also will immediately abate: and that the accession will be protracted if any aliment be given to him: and he will the sooner cease to thirst, who does not drink. But as it is absolutely necessary, and in proportion as persons in health sustain hunger much more easily than thirst, so much the more ought the sick to be indulged with drink rather than food. But on the first day indeed, no fluid ought to be given, unless the arterial action have subsided so suddenly, that food also may be indicated; but on the second, and also on the following day on which no food shall be given, yet if the thirst be very oppressive, some drink may be given.

The observation of Heraclides of Tarentum is not without reason. *He says*, that when either bite, or indigestion disorders the patient, that it is expedient for fresh material to be admixed with the vitiated, by drinking moderately of fluids. This must be observed, that the times chosen for food, are also eligible for drink, when it is given without food; or when we wish the patient to sleep, which for the most part thirst prohibits. It is satisfactorily agreed upon, that all fluids are injurious to every person in a state of pyrexia, but especially to females who have puerperal fever.

Sed cum tempora cibo potionique febris et remissionis ratio det, non est expeditissimum scire, quando æger febricitet, quando melior sit, quando deficiat; sinc quibus dispensari illa non possunt. Venis enim maxime credimus, fallacissimæ rei; quia sæpe istæ leniores celeiores sunt, et ætate, et sexu, et corporum natura: et plerumque satis sano corpore, si stomachus infirmus est, nonnumquam etiam incipiente febre, subeunt et quiescent; ut imbecillus visideri possit, cui facile laturo gravis instat accessio.

Contra sæpe cas concitat et resolvit sol, et balneum, et exercitatio, et metus, et ira, et quilibet aliis animi affectus: adeo ut, cum primum medicus venit, solicitude ægri dubitantis, quomodo illi se habere videatur, eas moveat. TRANSLATION.

But although the nature of the fever and its remission indicate the times for food and drink, yet it is not very easy to know when the sick person is in fever, when he is better, and when he is exhausted: without a knowledge of which, those things cannot be advantageously administered. For we depend much on arterial action, and a most fallacious diagnosis it is; because these (*pulsations*) are often more gentle or more rapid, according to the age, sex, and nature of constitutions; and generally, when a person is in good health, if the stomach be weak, or sometimes even under incipient fever, the pulsations are diminished in number and volume; so that he may appear weak, who is sufficiently able to sustain a severe paroxysm.

On the other hand, very often the sun, a bath, exercise, fear, anger, or any other emotion of the mind accelerate the pulsations; so that when a physician first comes in, the solicitude of the patient, doubtful and apprehensive respecting what opinion the physician may have of his ease, is of itself sufficient cause to excite the pulse. FOR THIS REASON, IT IS THE PART OF A SKILFUL PHYSICIAN, NOT TO SEIZE THE PATIENT'S ARM IMMEDIATELY, AS HE ENTERS THE CHAMBER, BUT LET HIM SIT DOWN FIRST, WITH A CHEERFUL COUNTENANCE, AND TO ENQUIRE HOW HE FINDS HIMSELF, AND IF HE SEEM ALARMED, TO SOOTHE HIM WITH SOME PLAU-SIBLE OBSERVATIONS; THEN HE MAY APPLY HIS HAND TO THE BODY (2). But

medici movet, quam facile mille res turbant! Altera res est, cui credimus, calor, æque fallax: nam hie quoque excitatur æstu, labore, somno, metu, sollicitudine.

Igitur intueri quidem etiam ista oportet; sed his non omnia credere. Ac protinus quidem scire, non febrieitare cum, cuius venæ naturaliter ordinatae sunt, teporque talis est, qualis esse sanis solet: non protinus autem sub calore motuque febrem esse conceipere; sed ita, si summa quoque arida inæqualiter eutis est; si calor et in fronte est, et ex imis præcordiis oritur; si spiritus ex naribus cum fervore prorumpit; si color, aut rubore, aut pallore novo mutatus est; si oculi graves, et aut persicci, aut subhumidi sunt; si sudor eum fit, inæqualis est; si venæ non æquis intervallis moventur. Ob quam eausam medicus neque in tenebris, neque a capite ægri debet residere; sed illustri loco adversus eum, ut omnes notas, ex vultu quoque cubantis perspiciat. turbant venas quas conspectus medici movet! Altera res, cui credimus, calor, est æque fallax: nam hic quoque excitatur æstu, labore, somno, metu, sollicitudine.

Igitur oportet quidem etiam intueri ista: sed non credere omnia his. Ac quidem protinus scire cum non febicitare, venæ enjus sunt naturaliter ordinatae, que tepor est talis qualis solet esse sanis: autem non protinus concipere febrem esse sub calore, que motu; sed ita, si quoque summa entis est inæqualiter arida; si, et calor est in fronte, et oritur ex imis præcordiis; si spiritus prorumpit ex naribus cum fervore; si color mutatus est, aut novo rubore ant pallore; si oculi sunt graves, et aut persicci, aut subhumidi; si sudor est inæqualis, cum fit, si venæ moventur non æquis intervallis. Ob quam causam medicus debet residere, neque in tenebris, neque a capite ægri; sed illustri loco adversus eum, ut perspiciat omnes notas, ex vultu quoque cubantis. Vero ubi febris fuit, atque decrevit, oportet exspectare, num tempora ve aliæ partes corporis madescant paulum, quæ testentur sudorem esse ven-

TRANSLATION.

how easily might a thousand other incidents excite the veins (*heart's action*) as well as the sight of a physician! Another thing on which we depend, the temperature of the body, is equally fallacious: for this also is excited by the heat of the sun, labour, sleep, fear, solicitude.

Therefore it is necessary to weigh all those circumstances, but not to place implicit confidence on them alone. We may know immediately that a person is not in a fever, whose pulse beats naturally, and the temperature is such as is usual in healthy persons: but not to imagine hastily that fever exists under heat and vascular action; but it is much more confirmatory, if the surface of the skin be unequally arid; if there be a heat in the forehead, and at the same time arising from the bottom of the *præcordia*; if the breath rush out of the nostrils with fervor; if the colour be changed, either for an unusual redness or pallor; if the eyes be heavy, or either very dry, or rather moist; if partial diaphoresis take place; if the pulsations be not at equal intervals. For this reason the physician ought not to sit down in the dark, nor at the patient's head, but in a well lighted place opposite to him, that he may observe all the symptoms from the countenance of the patient as he lies. But when a paroxysm has taken place, and is just on the decline, it is proper to examine, whether the temples or any other parts of the body have become a little moist, which is the indication of a perspiration about to follow: and if

tentur: ac si qua nota est, tunc demum dare potui calidam aquam; cuius salubris effectus est, si sudorem per omnia membra diffundit. Hujus autem rei causa, continere æger sub veste satis multa manus debet; eademque crura, pedesque contegere: qua mole plerique ægros in ipso febris impetu, potissimum que ubi ardens ea est, male habent.

Si sudare corpus coepit, linteum tepefacere oportet, paulatimque singula membra detergere. At ubi sudor omnis finitus est, aut si is non venit, ubi quam maxime potuit, idoneus esse cibo æger videtur, sub veste leniter ungendus est, tum detergendus, deinde ei cibus dandus.

Is autem febricitantibus humidus est aptissimus, aut humoris certe quam proximus: utique ex materia quam levissima, maximeque sorbitio; eaque, si magnae febres fuerint, quam tenuissima esse debet. Mel quoque despumatum huic recte adjicitur, quo corpus magis nutritatur: sed id, si stomachum offendit, supervacuum est; sicut ipsa quoque sorbitio. Dari vero in vicem ejus potest, vel intrita ex aqua calida, vel alica elota; si firmus est stomachus,

TRANSLATION.

there be a prognosis of this kind, then we should give warm water to drink: the effect of which is salutary, if it diffuse a perspiration over all the limbs. But to accomplish this, the patient ought to keep his hands under a sufficient quantity of clothes, and to cover his legs and feet in the same manner: by which mass of clothing, many people maltreat their patients in the very height of the fever, and particularly if it be of the ardent kind.

When the body begins to perspire, it is necessary to warm a linen cloth and wipe every limb gradually. But when the diaphoresis is over, or if that have not come on, when the patient seems to be in a fit state to receive food, he is to be anointed gently under the clothes, then to be wiped, afterwards food is to be given to him.

Now liquid food is most proper for persons in fever, or at least as near as possible to liquids, especially that of the very lightest kind, particularly gruel; and if the fevers have been violent, even that ought to be as thin as possible. Also clarified honey may well be added to this, to render it more nutritive to the body; but that will be superfluous, if it offend the stomach: as also the gruel itself. But either panada(3) made with hot water, or washed alica may be given instead of

et compressa alvus, ex aqua mulsa; si vel ille languet, vel haec profluit, ex posea.

Et primo quidem cibo id satis est. Secundo vero aliquid adjici potest, ex eodem tamen genere materiae, vel olus, vel eonehylium, vel pomum. Et dum febres quidem inerescunt, hic solus idoneus cibus est. Ubi vero aut desinunt, aut levantur, semper quidem incependum est ab aliquo ex materia levissima, adjiciendum vero aliquid ex media, ratione habita subinde et virium hominis, et morbi.

Ponendi vero ægro varii eibi, sicut Aselepiades præcepit, tum deum sunt, ubi fastidio urgetur, neque satis vires sufficiunt; ut paulum ex singulis degustando, famem vitet. At si neque vis, neque cupiditas deest, nulla varietate sollicitandus æger est; ne plus assumat, quam coneoquat. Neque verum est, quod ab eo dicitur, facilius coneoqui eibos varios. Eduntur enim facilius: ad concoctionem autem materiae genus et modus pertinent. Neque inter magnos dolores, neque inerescente morbo, tutum est, ægrum eibo impleri; sed ubi inelinita jam in melius valetudo est.

ORDO.

est firmus, et alvus eompressa ex mlsa aqua; si vel ille languet, vel haec profluit ex posea.

Et id quidem est satis primo cibo. Vero secundo aliquid potest adjici, tamen ex eodem genere materiae, vel olns, vel conchylium, vel pomum. Et quidem dum febres inerescunt, hic cibus solns est idoneus. Vero ubi aut desinunt, aut levantur, est quidem semper incependum ab aliquo ex levissima materia, vero aliquid ex media adjiciendum ratione habita subinde et virium hominis et morbi.

Vero varii eibi sunt tum deum ponendi ægro, sicut Aselepiades præcepit, ubi urgetur fastidio, neque vires sufficient satis; ut degustando paulum ex singulis vitet famem. At si neque vis, neque cupiditas deest, æger est sollicitandus nulla varietate, ne assumat plus quam coneoquat. Neque est verum quod dicitur ab eo, varios cibos coneoqui facilis. Neque est tum ægrum impleri cibo inter magnos dolores, neque morbo inerescente: sed ubi jam valetudo est inclinata in melius.

TRANSLATION.

it; if the stomach be strong, and the bowels eostive, with hydromel; if *that* be weak or *this* relaxed, with posea.

This kind of aliment will be sufficient for the first meal: but at the second there may be something added, yet of the same nature, such as vegetables, or small shellfish, or fruit. Indeed while the fevers increase, this is the only proper food: but when they either cease, or abate, we should always commence with the lightest kind, but something from the middle class may be added, a due caution being observed from time to time both of the strength of the patient and state of the disease.

Aselepiades prescribes various kinds of food to be placed before the patient, when he is oppressed with nausea and debility: so that by tasting a little of each, he may escape starvation. But if neither strength nor appetite be wanting, the patient is to be solicited by no variety, lest he may take more than he can digest. Neither is that true, which is said by him, "*that a variety of food is more easily digested.*" Indeed it is eaten more readily; but the kind and quantity of the ingesta determine the facility of digestion. Neither is it safe for the patient to be indulged with food during severe pains, nor in the increment of a disease: but when the health inclines to amend.

Sunt aliae quoque observations in febris necessariae. Atque id quoque videndum est, quod quidam solum præcipiunt, adstrictum corpus sit, an profluat; quorum alterum strangulat, alterum digerit. Nam si adstrictum est, ducenda alvus est, movenda urina, eliciendus omni modo sudor. In hoc genere morborum sanguinem etiam mississe, concussisse vehementibus gestationibus corpus, in lumine habuisse, imperasse famem, sitim, vigiliam prodest. Utile est etiam ducere in balneum, prius demittere in solium, tum ungere, iterum ad solium redire, multaque aqua fovere inguina; interdum etiam oleum in solio cum aqua calida miscere; uti cibo serius et rarius, tenui, simplici, molli, calido, exiguo; maximeque oleribus, qualia sunt, lapathum, urtica, malva; vel jure etiam concharum, muscularumve, aut locustarum: neque danda caro, nisi elixa, est. At potio esse debet magis liberalis, et ante cibum, et post hunc, et cum hoc, ultra quam sitis coget: poteritque a balneo etiam pinguius, aut dulcius dari vinum; poterit semel, aut bis interponi Græcum salsum.

ORDO.

Quoque aliae observations sunt necessariae in febris. Atque id quoque est videndum, quod quidam præcipiunt solum, an corpus sit adstrictum, (an) profluat; alterum quorum strangulat, alterum digerit. Nam si est adstrictum, alvus est ducenda, urina movenda, sudor eliciendus omni modo. In hoc genere morborum prodest etiam mississe sanguinem, eoneussisse corpus vehementibus gestationibus, habuisse in lumine, imperasse famum, sitim, vigiliam. Est etiam utile ducere in balneum, prius demittere in solium, tum ungere, iterum redire ad solium, que fovere inguina multa aqua: interdum etiam miscere oleum in solio cum calida aqua; uti cibo serius et rarius, tenui, simplici, molli, calido, exiguo: que maxime oleibns, qualia sunt, lapathum, urtica, malva; vel etiam jure concharum, ve muscnlorum, aut locustarum: neque est earo danda, nisi (est) elixa. At potio debet esse magis liberalis, et ante cibum, et post hunc et cum hoc ultra quam sitis coget: que etiam pinguius, aut dulcius vinum poterit dari a balneo; Græcum salsum poterit interponi semel, aut bis.

TRANSLATION.

There are also other observations necessary in the treatment of fevers. And that also must be considered, (which some prescribe as the only remedy,) whether the body be bound, or relaxed; the one of which suffocates, the other exhausts. For if constricted, the bowels must be opened by injections, the urine to be promoted, and a diaphoresis is to be elicited by every possible means. In diseases of this kind, it is advantageous to let blood, to agitate the body by vehement gestations, to keep the patient in the light, and to enjoin hunger, thirst, and watching. It is also useful to lead the patient into a bath, but first of all to lower him into the solium, then to anoint him, again to return to the solium, and to foment the groins with plenty of water; sometimes to mix oil also with the hot water in the solium; to take food later, and more seldom, and that thin, simple, soft, hot and in small portions; and especially pot-herbs, such as the lapathum, nettle, mallow, or with liquor of shell-fish, either of mussels, or of lobsters; nor is flesh to be given, unless boiled. But the drink ought to be more abundant, both before and after food, especially while eating, even beyond what thirst requires; and also very rich or very sweet wine may be given after the bath; Greek salt wine may be interposed once or twice.

Contra vero, si corpus profluet, sudor coereendus, quies adlibenda erit; tenebris, somnoque, quandocumque volet, intendum; non nisi leni gestatione corpus agitandum, et pro genere mali subveniendum. Nam si venter fluit, aut si stomachus non continet, ubi febris deerevit, liberaliter oportet aquam tepidam potui dare, et vomere cogere; nisi aut fauces, aut praecordia, aut latus dolet, aut vetus morbus est. Si vero sudor exerceat, duranda eutis est nitro, vel sale, quae cum oleo miscentur: ae si levius id vitium est, oleo corpus ungendum; si vehementius, rosa, vel melino, vel myrteo, cui vinum austерum sit adjectum. Quisquis autem fluore æger est, cum venit in balneum, prius ungendus, deinde in solium demittendus est.

Si in eute vitium est, frigida quoque, quam calida aqua melius utetur. Ubi ad eibum ventum est, dari debet is valens, frigidus, siccus, simplex, qui quam minime corrupti possit, panis tostus, caro assa, vinum austерum, vel certe subausterum; si venter profluit, calidum; si sudores nocent, vomitusve sunt, frigidum.

TRANSLATION.

But on the other hand, if the body be relaxed, the perspiration must be checked, and rest enjoined; the chamber should be darkened, and the patient may sleep as often as he may wish it; the body must not be agitated, except by the most gentle movement, and to be supported according to the nature of the malady. For if the bowels be loose, or the stomach not retentive, warm water must be given copiously to drink, to induce vomiting, when the fever has subsided; unless either the fauces, or the praecordia, or pain in the side, or the disease have become chronic. But if there be colliquative diaphoresis, the skin must be indurated with nitre, or salt mixed up with oil: and if the malady be very slight, the body may be anointed with oil; if very vehement, with oil of roses, quince-oil, myrtle-oil, to which austere wine is to be added. But whatever patient be under flux, when he comes into the bath, should first be anointed, then to be immersed in the solium.

If the disease be cutaneous, it will be more advantageous for him to use cold water, than warm. When he is about to take food, that ought to be given highly nutritious, cold, dry, simple, highly antiseptic, toasted bread, roasted meat, sharp wine, or at least somewhat rough; if the bowels be relaxed, let it be given warm; if sweating or vomiting be the disorder, cold.

ORDO.

Vero contra, si corpus profluet, sudor erit coereendus, quies adhibenda: intendum tenebris, que somno, quandocumque volet: corpus non agitandum, nisi leni gestatione, et subveniendum pro genere mali. Nam si venter fluit, aut si stomachus non continet, oportet dari liberaliter tepidam aquam potui, ubi febris deerevit, et cogere vomere; nisi aut fauces, aut praecordia, aut latus dolet, aut vetus morbus est vetus. Vero si sudor exercet, eutis est duranda nitro, vel sale, quae miscentur cum oleo: ae si id vitium est levius, corpus ungendum oleo; si vehementius, rosa, vel melino, vel myrteo, cui austерum vinum sit adiectum. Autem quisquis æger est fluore, cum venit in balneum, est prins ungendus, deinde demittendus in solium.

Si vitium est in eute, utetur quoque frigida aqua, melius quam calida. Ubi ventum est ad eibum, is debet dari valens, frigidus, siccus, simplex, qui possit corrupti quam minime, tostus, assa cara, austernum vinum, vel certe suhanternum; si venter profluit calidum; si sudores nocent, ve sunt vomitus, frigidum.

CAP. VII.

QUOMODO PESTILENTES FEBRES
CURARI DEBEANT.

DESIDERAT etiam propriam animadversionem in febribus pestilentiae casus. In hac minime utile est, aut fame, aut medicamentis uti, aut ducere alvum. Si vires sinunt, sanguinem mittere optimum est; præcipueque, si cum dolore febris est: si id parum tutum est, ubi febris levata est, vomitu pectus purgare. Sed in hoc maturius, quam in aliis morbis, ducere in balneum opus est; vinum calidum, et meracius dare, et omnia glutinosa; inter quæ carnem quoque generis ejusdem. Nam quo cclerius ejusmodi tempestates corripiunt, eo maturius auxilia, etiam cum quadam temeritate, rapienda sunt.

Quod si puer est, qui laborat, neque tantum robur ejus est, ut sanguis mitti possit, cucurbitulis ei utendum est; ducenda alvus vel aqua vel ptisanæ cremore; tum demum levibus cibis nutritandus. Et ex toto non sic pueri, ut

CHAP. VII.

TREATMENT OF PESTILENTIAL AND ARDENT FEVERS.

THE treatment of pestilential fevers requires peculiar consideration. In this it is by no means proper to enjoin privation, medicine, or injections. IF THE STRENGTH PERMIT, THE BEST REMEDY IS TO LET BLOOD; and especially if the fever be accompanied with pain: if that be not safe, to evacuate the stomach by an emetic, when the fever subsides. But it is necessary to conduct the patient to a bath earlier in this, than in other diseases; to give him hot and very pure wine, and every thing glutinous; and among other things flesh of the same nature. For in proportion to the destructive tendency during a pestilential season of this kind, so much sooner should we administer remedies, even with some risk.

But if the sufferer be a child, and have not sufficient strength for bleeding, we must use the cupping instruments, and administer an enema either of water or decoction of strick barley, and afterwards to be nourished with light food. In

viri, curari debent. Ergo, ut in alio quoque genere morborum, pareius in his agendum est: non facile sanguinem mittere, non facile ducere alvum, non crueiare vigilia, fameve, aut nimia siti, non vino curare. Vomitus post febrem eliciendus est; deinde dandus eibus ex levissimis; tum is dormiat; posteroque die, si febris manet, abstineatur; tertio, ad similem eibum redeat. Dandaque opera est, quantum fieri potest, ut inter opportunam abstinentiam eibosque opportunos, omissis ceteris, nutriatur.

Si vero ardens febris extorret, nulla medicamenti danda potio est; sed in ipsis accessionibus oleo et aqua refrigerandus est, quae miscenda manu sunt, donee albescant; eo conclavi tenendus, quo multum et purum aerem trahere possit; neque multis vestimentis strangulandus, sed admodum levibus tantum velandus est. Possunt etiam super stomachum imponi folia vitis in aqua frigida tineta. Ac ne siti quidem nimia vexandus est. Alendum maturius est, id est a die tertio; et ante cibum iisdem perungendus. Si pituita in stomacho coiit, inclinata jam accessione, vomere cogendus est; tum dandum frigidum

ORDO.

bent curari sic, ut viri. Ergo, est agendum pareius in his, ut in quoque aliogenere morborum; non facile mittere sanguinem, non facile ducere alvum, non crueiare vigilia, ve fame, aut nimia siti, non enrare vino. Vomitus est eliciendus post febrem; deinde eibus ex levissimis dandis: tum is dormiat; que postero die, si febris manet, abstineatur; tertio, redeat ad similem eibum. Que opera est danda quantum potest fieri, ut nutritur inter opportunam abstinentiam que opportunos cibos, exceptis omissis.

Vero si ardens febris extorret, nulla potio medicamenti est danda; sed est refrigerandus in accessionibus ipsis oleo et aqua, quae sunt miseenda manu, donec albescant; teneendas eo eonclavi, quo possit trahere multum et purum acrem; neque est strangulandus vestimentis, sed velandus tantum admodum levibus. Etiam folia vitis tineta in frigida aqua possint imponi super stomachum. Ac nequidem est vexandus nimia siti. Est alendum maturius, id est a tertio die, et perungendus iisdem ante eibum. Si pituita coiit in stomacho, acessione jam inelinata, est cogendus vomere; tum frigidum

TRANSLATION.

short, children ought not to be treated as adults. Therefore we must act very cautiously in this, as well as in every other kind of disease; we must not be too ready to let blood, or exhibit an enema, or to torment by vigilance, or hunger, or too much thirst, neither to indulge them with wine. Vomiting is to be promoted after the fever; and then food of the lightest kind to be given; afterwards the patient may go to sleep; on the following day, if the fever remains, he must abstain from food; on the third, he may return to the same diet. Taking all possible care, that he may be seasonably alimented; and interposing a well-timed abstinence; other things being omitted.

But if an ardent fever torture the patient, no medicinal potion must be given; but during the aecessions, he is to be refrigerated with oil and water, which are to be agitated with the hand, until they become white; he must be kept in a chamber where he can inhale plenty of pure air; nor should he be suffocated with clothing, but to be covered only very lightly. Vine leaves dipped in cold water may be laid on the stomach: nor must he be harassed with too much thirst. He must be nourished earlier, that is, after the third day; and to be well anointed with the above mentioned liquids before food. If phlegm have collected in the stomach, he must be compelled to vomit, when the paroxysm is retrogressing; then cold vege-

olus, aut pomum, ex iis, quae stomaeho conveniunt. Si sieeus manet stomaehus, protinus vel ptisanæ, vel aliaeæ, vel oryzæ eremor dandus est, eum quo reeens adeps eoeta sit. Cum vero in summo ineremento morbus est, utique non ante quartum diem, magna siti antecedente, frigida aqua copiose præstanta est, ut bibat etiam ultra satietatem; et eum jam venter et præcordia ultra modum repleta, satisque refrigerata sunt, vomere debet.

Quidam, ne vomitum quidem exigunt; sed ipsa aqua frigida tantum, ad satietatem data, pro medicamento utuntur. Ubi utrumlibet factum est, multa veste operiendus est, et collocandus, ut dormiat. Fereque post longam sitim et vigiliam, post multam satietatem, post infractum calorem, plenus somnus venit, per quem ingens sudor effunditur; idque præstantissimum auxilium est: sed in iis tamen, in quibus præter ardorem, nulli dolores, nullus præcordiorum tumor; nihil prohibens, vel in thorace, vel in pulmone, vel in fauebus; non uleus, non dejeetio, non profluvinum alvi fuit. Si quis autem in ejusmodi febre leviter tussit, is neque vehementi siti conflietur, neque bi-

ORDO.

olus dandus, aut pomum, ex iis quae conveniunt stomacho. Si stomachus manet siccus, eremor vel ptisanæ, vel aliaeæ, vel oryzæ est protinus dandus, eum quo reeens adeps eoeta sit. Vero eum morbus est in summo incremento, magna siti antecedente, frigida aqua est præstanta copiose, utique non ante quartum diem, ut bibat etiam ultra satietatem; et eum venter et præcordia sunt jam repleta ultra modum, que satis refrigerata, debet vomere.

Quidam, nequidem exigunt vomitum; sed utuntur tantum frigida aqua ipsa, data ad satietatem, pro medicamento. Ubi utrumlibet factum est, operiendus est multa veste, et collocandus, ut dormiat. Que fere post longam sitim et vigiliam, post multam satietatem, post ea lorem infractum, plenus somnus venit, per quem ingens sudor effunditur, qui id est præstantissimum auxilium; sed tamen in iis in quibus præter ardorem, nulli dolores, nullus tumor præcordiorum, nihil prohibens, vel in thorace, vel in pulmone, vel in fauebus; non fuit nleus, non dejeetio, non profluvinum alvi. Autem si quis in febre hujusmodi tussit leviter, is neque conflietur vehementi siti, neque debet

TRANSLATION.

tables are to be given, or those fruits which agree with the stomach. If the stomach remain dry, either barley water, or that of alia, or of rice boiled with fresh fat, must be given immediately. But when the fever has reached its highest increment, preceded by great thirst, cold water must be given copiously, that he may drink even beyond satiety, but not before the fourth day; and when his stomach is replete beyond measure and sufficiently cooled, he ought to vomit.

Some physicians do not insist upon vomiting; but prescribe cold water only, and that given to satiety by way of medicine. When either one or the other of these have been done, he must be covered with plenty of clothing, and laid in a favourable position for sleep. After long thirst and vigilance, after much satiety, after subdued heat, generally a sound sleep ensues: by means of which a general dia-phoresis is effused, and that is accompanied with immediate relief; but only in those, who have an ardent heat, but no pain, no tumour of the præcordia; nothing to prevent it either in the lungs, thorax, or fauces; or who have had no ulcer, no diarrhoea, nor flux. But if any person in a fever of this sort cough slightly, he

bere aquam frigidam debet; sed eo modo eurandus est, quo in eeteris febribus præcipitur.

ORDO.

bibere frigidam aquam, sed est eurandus eo modo, quo præcipitur in eæteris febribus.

Enim plerumque habet frequentiores accessiones que decessiones, ut possit videri aliud genus morbi: que febris porrigitur inter viginti quatuor, et triginta sex horas; ut, quod est idem, non videatur esse idem. Et est magnopere necessarium, neque cibum dari, nisi in ea remissione quæ est vera: et ubi ea venit, dari protinus: que plurimi moriuntur subito sub alterutro errore curantur. Ac nisi aliqua res magnopere prohibet, sanguis debet mitti inter initia; tum cibus dari, qui neque incitet febrem, et tamen sustineat longum spatium ejus.

TRANSLATION.

CHAP. VIII.

TREATMENT OF A SEMITERTIAN.

BUT when it is that genns of tertian, which physicians term semitertian, it requires particular care, lest it may deceive. For generally it has more frequent accessions and remissions, so that it may assume the form of another disease: and the paroxysm is prolonged to from twenty-four to thirty-six hours, so that, what is really the same, may not appear to be so. Therefore, it is highly necessary, that food should not be given, except in that remission which is certain; and when it comes, to give it immediately; and very many patients die suddenly from the ignorance of the medical attendant from either of these errors. Therefore, unless there be some very important impediment, blood ought to be taken at the beginning; then food to be given, which may not excite the fever, and yet support the patient under its long duration.

CAP. IX.

ORDO.

CURATIO LENTARUM FEBRIUM.

NONNUMQUAM etiam lentæ febres sine ulla remissione corpus tenent; ac neque cibo, neque ulli remedio locus est. In hoc easu medici cura esse debet, ut morbum mutet: fortasse enim curationi opportunior fiet. Sæpc igitur ex aqua frigida, cui oleum sit adjectum, corpus ejus pertractandum est, quoniam interdum sic evenit, ut horror oriatur, et fiat initium quoddam novi motus; exque eo, cum magis corpus incaluit, sequatur etiam remissio. In his frictio quoque ex oleo et sale salubris videtur.

At si diu frigus est, et torpor, et jactatio corporis, non alienum est, in ipsa febre dare mulsi tres aut quatuor cyathos, vel cum cibo vinum bene dilutum. Intenditur enim sæpc ex eo febris; et major ortus calor simul et priora mala tollit, et spem remissionis, inque ea curationis ostendit.

CAP. IX.

CURATIO LENTARUM FEBRIUM.

ETIAM nonnumquam lentæ febres tenent corpus sine ulla remissione; ae est locus neque cibo neque ulli remedio. In hoc easu cura medici debet esse ut mutet morbum; enim fortasse fiet opportunior curationi. Igitur corpus ejus est pertractandum ex frigida aqua, cui oleum adiectum sit, quoniam interdum evenit sie, ut horror oriatur, et quoddam initium novi motus fiat: que ex eo, cum corpus incaluit magis, etiam remissio sequatur. In his quoque frictio ex oleo et sale videtur salubris.

At si est diu frigus, et torpor, et jaetatio corporis, non est alienum in febre ipsa dare tres aut quatuor cyathos mulsi, vel vinum bene dilutum cum cibo. Enim saepe febris intenditur ex eo; et major calor ortus simul et tollit priora mala, et ostendit spem remissionis, que in ea curationis,

TRANSLATION.

CHAP. IX.

TREATMENT OF SLOW FEVERS.

SOMETIMES also slow fevers maintain their hold in the body without any remission: so that there is neither time for food, nor any other remedy. In this case, it should be the physician's care to effect a change in the disease; then, perhaps, it would yield more favourably to treatment. Therefore his body is to be lightly handled (*sprinkled*) with cold water, to which some oil has been added, and thus it happens sometimes, that shivering is induced, which may be the commencement of a new action; and after that, when the body has become hotter, a remission may follow. In these cases also, friction with oil and salt seems salutary.

But if there be cold, torpor, and agitation of the body for some time, it is not improper to give three or four glasses of hydromel or well diluted wine with the food. For the fever is often augmented by that; and a greater heat having arisen, at the same time carries off the former malady, and holds out a prospect of a remission, and from that a recovery.

Neque, hereules, ista euratio nova est, qua nunc quidam traditos sibi ægros, qui sub ea utioribus medicis trahebantur, interdum contrariis remediis sanant. Siquidem apud antiquos quoque ante Herophilum et Erasistratum, maximeque post Hippoeratem fuit Petro quidam, qui febrietanem hominem ubi aeeperat, multis vestimentis operiebat, ut simul ealorem ingentem, sitimque excitaret: deinde, ubi paulum remitti eœperat febris, aquam frigidam potui dabat; ae, si moverat sudorem, explieuisse se ægrum judiebat; si non moverat, plus etiam aquæ frigidæ ingerebat; et tum vomere eogebat. Si alterutro modo febre liberaverat, protinus suillam assam, et vinum homini dabat: si non liberaverat, deeoquebat aquam sale adjeeto, eamque bibere eogebat, ut movendo ventrem purgaret.

Et intra hæc omnis ejus medieina erat: eaque non minus grata fuit iis, quos Hippoeratis successores non refererant; quam nunc est iis, quos Herophili vel Erasistrati aemuli diu traetos non expedierunt. Neque ideo tamen non est temeraria ista medieina; quia plures, si protinus a principiis excepit,

ORDO.

Neque herenle, est ista nova euratio, qua nunc quidam sanant interdum contrariis remediiæ ægros traditos sibi, qui trahebantur sub ea utioribus medicis. Et omnis medieina ejus erat inter haec: que ea fuit non minus grata iis quos successores Hippoeratis non reficerant, quam est nunc iis, quos aeranli Herophili et Erasistrati non expedierunt, traetos diu. Neque tamen est ista medieina non temeraria ideo; quia intermit plures, si excepit protinus a principiis.

TRANSLATION.

Nor is this indeed a new mode of treatment, for even now, there are some QUACKS who succeed sometimes with patients who trust themselves under them, by contrary remedies, who were long under the care of more cautious physicians. Even among the ancients also before the time of Herophilus and Erasistratus, and especially after Hippocrates, there was a certain Petro, who, upon being called to a person in fever, covered him with a vast quantity of clothes, that he might at the same time excite a great heat and thirst: afterwards, when the fever had subsided a little, he gave him cold water to drink; and if it promoted diaphoresis, he pronounced the patient to be cured; but if he did not succeed in this, he even repeated the cold water, and then forced him to vomit. If he had liberated his patient from fever by either mode, he immediately gave him roasted pork and wine: if he did not relieve him by these means, he boiled salt in water, and compelled him to drink it, so that by purging the bowels, he might cleanse the stomach.

The whole of his practice was comprised in these particulars: and this was not less gratifying to those whom the disciples of Hippocrates had not restored, than it is now to those, whom the disciples of Herophilus and Erasistratus have not cured, after a protracted treatment. But this practice is not the less imprudent, on that account; for, if acted upon in the commencement of a fever, it would destroy more

interimit. SED CUM EADEM OMNIBUS CONVENIRE NON POSSINT, FERE, QUOS RATIO NON RESTITUIT, TEMERITAS ADJUVAT. IDEOQUE EJUSMODI MEDICI MELIUS ALIENOS ÆGROS, QUAM SUOS NUTRIUNT. CHAP. X.

TREATMENT OF FEVER WITH CONCOMITANT SYMPTOMS.

IT must be considered also, whether the fever be alone, or whether accompanied by some other maladies; that is, whether the head be painful, the tongue rough, or the præcordia tense. If there be pains of the head, it will be beneficial to mingle rose oil with vinegar, and to apply it: afterwards to have two rolls of equal

et rosa habere, alterum in fronte; aut intinctam iisdem lanam succidam imponere.

Si acetum offendit, pura rosa utendum est; si rosa ipsa laedit, oleo acerbo.

Si ista parum juvant, teri potest vel iris arida, vel nuces amaræ, vel qualibet herba ex refrigerantibus: quorum quilibet ex aceto impositum, dolorem minuit; sed magis aliud in alio. Juvat etiam panis eum papavere injectus; vel eum rosa cerussa, spumave argenti. Olfacere quoque vel serpyllum, vel anethum, non alienum est.

At si in præcordiis inflammatio et dolor est, primo superimponenda sunt cataplasma reprimenda; ne, si calidiora fuerint, plus eo materiae concurrat: deinde, ubi prima inflammatio se remisit, tunc demum ad calida et humida veniendum est; ut ea, quæ remanserunt, discentiant. Notæ vero inflammationis sunt quatuor, rubor, et tumor, cum calore, et dolore.

Quo magis erravit Erasistratus, qui febrem nullam sine hac esse dixit. Ergo si sine inflammatione dolor est, nihil imponendum est: hunc enim statim ipsa febris solvet. At si neque inflammatio,

ORDO.

et rosa, alterum in fronte; aut imponere sucidam lanam intinctam iisdem.

Si acetum offendit, est utendum pura rosa; si rosa ipsa laedit, acerbo oleo.

Si ista juvant parum, vel arida iris potest teri, vel amare nuces, vel qualibet herba ex refrigerantibus: quilibet quorum ex aceto impositum, minnit dolorem; sed alius magis in alio. Etiam panis cum papavere injectus; vel cum rosa, cerussa, vel spinna argenti. Quoquo non est alienum olfacere vel serpyllum vel anethum.

At si est inflammatio et dolor in præcordiis, primo reprimenda sunt cataplasma superimponenda, ne si fuerint calidiora, plus materiae concurrat eo; deinde, ubi prima inflammatio remisit se, tunc demum est veniendum ad calida et humida; ut discentiant ea quæ remanserunt. Vero sunt quatuor notæ inflammationis rubor et tumor, cum calore et dolore.

Quo Erasistratus erravit magis, qui dixit nullam febrem esse sine haec. Ergo si est dolor sine inflammatione, nihil est imponendum: enim febris ipsa statim solvit hunc. At si est neque inflam-

TRANSLATION.

length and breadth of the forehead; to have one of these alternately in the rose oil, and the other on the forehead; or to lay on sordid wool moistened with it.

If vinegar offend, we may use the pure oil; if rose oil itself be unpleasant, with oil of bitter (*almonds*).

If those things be of little avail, either dry iris, or bitter almonds, or any one of the refrigerant herbs may be powdered: any of which being applied with vinegar will diminish the pain; but more in one case, than in another. Bread also laid on with poppies, or with rose oil, ceruss, or litharge: neither is it improper to smell wild thyme or dill.

But, if there be pain and inflammation in the præcordia, repressing cataplasms are to be laid on first; lest, if there be too much heat, more matter might be attracted thither; afterwards, when the first inflammation has remitted, then we come to use the warm and moist; that they may disenss the relies. Now there are four diagnostic marks of inflammation, REDNESS, and SWELLING, with HEAT, and PAIN.

In which Erasistratus was much mistaken, who said no fever could be without this inflammation. Therefore if there be pain without inflammation, nothing should be laid on; for the fever itself will dispel this. But if there be neither in-

neque febris, sed tantum præcordiorum dolor est, protinus calidis et siccis fomentis uti licet. Si vero lingua sicca et scabra est, detergenda primum penicillo est ex aqua calida: deinde ungenda mistis inter se rosa et mel. Mel purgat, rosa reprimit, simulque siccere non sinit. At si scabra non est, sed arida, ubi penicillo detersa est, ungi rosa debet, cui ceræ paulum sit adjicatum.

ORDO.

matio neque febris, sed tantum dolor præcordiorum, licet uti protinus calidis et siccis fomentis. Vero si lingua est arida et scabra, primum est detergenda ex penicillo calida aqua: deinde ungenda rosa et melle mixtis inter se. Mel purgat, rosa reprimit, que simul non sinit siccere. At si non est scabra, sed arida, ubi detersa est penicillo, debet ungi rosa, cui paulum ceræ adjectum sit.

TRANSLATION.

flammatiō nor fever, but only a pain of the præcordia, warm and dry fomentations may be used immediately. If the tongue be dry and rough, it must be cleansed first with a dossil of lint dipped in hot water: afterwards to be anointed with rose oil and honey mixed together. The honey cleanses, the rose oil astringes, and at the same time does not suffer it to become dry. But if it be not rough, but dry, when wiped, it ought to be anointed with rose oil, to which a little wax may be added.

TREATMENT OF THE COLD STAGE WHICH PRECEDES FEVER.

IT is usual to have the sensation of cold preceding fever; and even that is a most troublesome kind of disease. When that is anticipated the patient ought to be withheld from all drink; for even this given a little before, aggravates the disease very much: he rather ought to be covered without delay with plenty of clothing: dry and hot fomentations to be applied to those parts for which we are apprehensive, so that the most violent heat may not begin immediately, but increase gra-

quoque ea partes manibus unctis ex vetero oleo sunt, eique adjiciendum aliquid ex calefacentibus.

Contentique medici quidam una fricatione, etiam ex quolibet oleo, sunt. In harum febrium remissionibus nonnulli tres, aut quatuor sorbitonis eyathos, etiamnum manente febre, dant: deinde, ea bene finita, reficiunt stomachum cibo frigido et levi.

Ego tum hoc puto tentandum, cum parum cibus, semel et post febrem datus, prodest. Sed curiose prospicendum est, ne tempus remissionis decipiatur: saepe enim in hoc quoque genere valetudinis jam minui febris videtur, et rursus intenditur. Itaque ei remissioni credendum est, quae etiam immoratur, et jactationem, fætoremque quemdam oris, quem ὄξην Graeci vocant, minuit. Illud satis convenit, si quotidiane pares accessiones sunt, quotidie parvum cibum dandum: si impares, post graviorem, cibum; post leviorum, aquam mulsum.

ORDO.

ea partes sunt perfricandæ manibus unctis ex vetero oleo, que aliquid ex calefacentibus adjiciendum ei.

Que quidam medici sunt contenti una fricatione, etiam ex quolibet oleo. In remissionibus harum febrium nonnulli dant tres aut quatuor eyathos sorbitonis, febre etiamnum manente: deinde, ea bene finita, reficiunt stomachum frigido et levi cibo.

Ego puto hoc tentandum tum, quum cibus datus semel et post febrem prodest parvum. Itaque est credendum ei remissioni quæ etiam immoratur, et minuit jactationem, que quandam fætorem oris, quem Graeci vocant ὄξην (ozen). Illud convenient satis, si accessiones sunt pares quotidiane: si impares, cibum post graviorem: mulsum aquam post leviorum.

TRANSLATION.

dually. Also those parts are to be rubbed over by the hands anointed with old oil, and some of the ealefacients may be added to it.

Some physicians are contented with one rubbing, even with any oil. In the remissions of those fevers some give three or four cups of gruel, even while the fever remains: afterwards that being entirely over, they replenish the stomach with cold, light food.

I think this ought to be tried, when food has been given once after fever without any advantage. But we must guard carefully, lest the time of the remission deceive us: for in this kind of disease the fever often disappears, and is again suddenly exasperated. Therefore that remission is to be relied on which is permanent, diminishing the agitation, and a certain fætor of the mouth, which the Greeks call ὄξες. That is agreed upon, if the accessions be every day equal, for a little food to be given daily: if they be unequal, the food to be given after the more severe paroxysm; after the milder, hydronel.

CAP. XII.

CURATIO HORRORIS IN FEBRIBUS.

HORROR autem cas fere febres antecedit, quae certum habent circuitum, et ex toto remittuntur; ideoque tutissimæ sunt, maximeque curationes admittunt. Nam ubi incerta tempora sunt, neque alvi ductio, neque balneum, neque vinum, neque medicamentum aliud recte datur. Incertum est enim, quando febris ventura sit: ita fieri potest, ut, si subito venerit, summa in eo pernicies sit, quod auxilii causa sit inventum. Nihilque aliud fieri potest, quam ut primis diebus bene abstineatur æger; deinde, sub decessu febris ejus, quæ gravissima est, cibum sumat.

At ubi certus circuitus est, facilis omnia illa tentantur; quia magis proponere nobis et accessionum et decessorum vices possumus.

In his autem, cum inveteraverunt, utilis fames non est: primis tantummodo diebus ea pugnandum est; deinde dividenda curatio est, et ante horror, tum febris discutienda. Igitur cum

TRANSLATION.

CHAP. XII.

TREATMENT OF SHIVERING IN FEVERS.

Now shivering is a common precursor in those fevers which have a certain circuit, and remit entirely; and on this account they are most safe, and mostly admit of cure. For when the returns are uncertain, neither alviduction, nor the bath, nor wine, nor any other kind of medicine can be given with safety. Since it is uncertain when the fever may come on: it is possible, that, if it attack suddenly, the greatest injury may ensue from that which was intended to afford relief. Hence nothing else can be done, but to let the patient observe strict abstinence at first; then he may take food after that accession which is most severe.

But when the circuit is regular, all those remedies are tried more easily; because we are better able to calculate the changes both of the accessions and regressions.

But when these fevers have become chronic, privation is of no avail: food must be resisted only on the first days; afterwards the treatment is to be divided in its object, first the shivering, then the fever is to be dissipated. Therefore when a

primum aliquis inhorruit, et ex horrore inmealuit, dare ei oportet potui tepidam aquam subsalsam, et vomere cum cogere: nam fere talis horror ab iis oritur, quæ biliosa in stomacho resederunt. Idem faciendum est, si proximo quoque circuitu æque accessit: sæpe enim sic disertitur: jamque, quod genus febris sit, scire licet.

Itaque sub exspectatione proximæ accessionis, quæ instare tertia potest, deducendus in balneum est; dandaque opera, ut per tempus horroris in solio sit. Si ibi quoque senserit, nihilominus idem sub exspectatione quartæ accessionis faciat: siquidem eo quoque modo sæpe is discutitur. Si ne balneum quidem profuit, ante accessionem allium edat, aut bibat calidam aquam cum pipere: siquidem ea quoque assumpta calorem movent, qui horrorem non admittit. Deinde eodem modo, quo in frigore præceptum est, antequam inhorre seere possit, operiatur: fomentisque, sed protinus validioribus, totum corpus circumdare convenit, maximeque involutis extinctis testis et titionibus.

Si nihilominus horror perruperit, multo oleo calefacto inter ipsa vestimenta perfundatur, cui æque ex calefa-

TRANSLATION.

person has shivered, and then becomes hot, it will be necessary to give him tepid water slightly salted, and compel him to vomit: for generally such shivering arises from something bilious having accumulated in the stomach. The same method is to be pursued, if it return with the subsequent paroxysm: for thus it is often removed: and by this time we may discover its genus.

Therefore under the expectation of the next accession, that being the third, which possibly may come on, the patient must be conducted to the bath, and care must be taken that he be in the solium during the time of shivering. If even there, he have felt cold, he must repeat it nevertheless, about the time of the fourth accession: for by these means also it is often removed. If the bath have not proved useful, he may eat garlic before the accession, or he may drink warm water with pepper: for those things being taken, excite warmth, and repel the shivering. Afterwards he may be covered in the same manner directed in the cold stage, before the shivering come on: and if practicable, the whole body should be involved immediately with powerful fomentations, and particularly with hot tiles, and extinguished brands wrapped up in cloths.

If notwithstanding, he be seized with shivering, he must be anointed under the clothes with plenty of heated oil, to which may be added some of the calefacentants

cicntibus aliquid sit adjectum; adhibeaturque frictio, quantam is sustinere poterit, maximeque in manibus et pedibus; et spiritum ipse contineat. Neque desistendum est, etiam si horror est: saepe enim pertinacia juvantis malum corporis vincit.

Si quid evomuit, danda aqua tepida, iterumque vomere cogendus est; utendumque eisdem est, donec horror finitur. Sed praeter haec ducenda alvus est, si tardius horror quiescat: siquidem id quoque exonerato corpore prodest. Ultimaque post haec auxilia sunt gestatio et frictio. Cibus autem in ejusmodi morbis maxime dandus est, qui mollem alvum praestet; caro glutinosa; vinum, cum dabatur, austerum.

TRANSLATION.

also: and friction may be used to as great an extent as he can bear it; especially on his hands and feet, and let him retain his breath. This must be persisted in, even although the shivering return, for the perseverance of the attendant, often subdues the disease.

If he have vomited any thing, tepid water should be given him; and he is to be excited to vomit again; these means to be used until the shivering cease. But besides these, injections must be administered, if the shivering yield slowly, since by unloading the bowels, the body is relieved. The next remedies after these, are gestation and friction: food which may render the motions free, is especially to be given in diseases of this kind; glutinous flesh; austere wine, if any be given.

CHAP. XIV.

TREATMENT OF A TERTIAN FEVER.

BUT if it be a tertian or quartan with free intermissions, on the intermediate days it will be proper to walk, to use other exercises, and to anoint. Cleopphantus, one of the more ancient physicians, used to pour plenty of warm water upon the patient's head, in this disease, long before the paroxysm came on, then he gave him wine. But Aselepiades very properly disregarded this mode, although he has followed the most of this man's precepts: for it is doubtful.

The last writer himself says that we must clear out the bowels by injections on the third day after the acession, if the fever be tertian; on the fifth to elicit vo-

clieere; dcinde post febrem, sicut illi mos erat, adhuc calidis dare cibum et vinum; sexto die, in lectulo detineri: sie enim fore, ne septimo die febris acedat. Id saepe fieri posse, verisimile est. Tutius tamen est, ut hoc ipso ordine utamur; tria remedia, vomitus, alvi ductionis, vini, per triduum, id est die tertio, et quinto, et septimo tentare: nec vinum, nisi post accessionem, dic septimo bibat.

Si vero primis diebus discussus morbus non est, inciditque in vetustatem, quo die febris exspectabitur, in lectulo se contineat; post febrem perfrietur; tum, cibo assumpto, bibat aquam; postero die, qui vacat, ab exercitatione unctioneque, aqua tantum contentus, conquiescat. Et id quidem optimum est. Si vero imbecillitas urgebit, et post febrem vinum, et medio die paulum cibi debet assumere.

ORDO.

deinde post febrem, sicut mos erat illi dare cibum et vinum adhuc calidis; sexto die detineri in lectulo; cuim sie fore, febris ne acedat septimo die. Est verisimile, id saepe posse fieri. Tamen est tutius, ut utamur hoc ordine ipso, tentare tria remedia, vomitus, ductionis alvi, vini, per triduum, id est, tertio, et quinto, et septimo die; nec bibat vinum septimo die, nisi post accessionem.

Vero si morbus non est discussus primis diebus, que ineedit in vetustatem, contineat se lectulo die quo febris exspectabitur: bibat aquam; postero die, qui vacat, conqniescat ab exercitatione que unctione, contentus aqua tantum. Et id quidem est optimum. Vero si imbecillitas urgebit, debet et assumere vinum post febrem, et paulum cibi medio die.

TRANSLATION.

miting after the shivering; then after the fever, as it was usual to him, (Cleophaeus,) to give food and wine, while they remain hot: on the sixth day to keep them in bed: for in this way he thought there would be no accession on the seventh day. That this may happen frequently, is probable. But it is safer to follow this order, and to administer the three remedies, of vomiting, elystring, and wine, for three days, that is, on the third, fifth, and seventh; and not to have wine on the seventh day, until after the accession.

But if the disease be not removed on the first days, and then become inveterate, let him retain his bed on that day, that he anticipates the paroxysm: after the accession he may be rubbed, then he may take food, and drink water; on the following day, being free from fever, he may intermit his exercise and unction, and content himself with water only: and this indeed is the best. But if debility urge, it will be necessary for him to take wine after the paroxysm, and some food on the intermediate day.

CAP. XV.

CURATIO QUARTANÆ FEBRIS.

Eadem in quartana facienda sunt. Sed cum haec tarde admodum finiatur, nisi primis diebus discussa est, diligentius ab initio præcipiendum est, quid in ea fieri debeat. Igitur si cui cum horrore febris accessit, caque desiit, eodem die et postero tertioque continere se debet, et aquam tantummodo calidam primo die post febrem sumere; biduo proximo, quantum fieri potest, ne hanc quidem. Si quarto die cum horrore febris revertitur, vomere, sicut ante præceptum est; deinde post febrem, modicum cibum sumere, vini quadrantem; postero tertioque die abstinere, aqua tantummodo calida, si sitis est, assumpta. Septimo die balneo frigus prævenire; si febris redierit, ducere alvum; ubi ex eo corpus conquiererit, in unctione vehementer perficari; eodem modo sumere cibum et vinum; biduo proximo se abstinere, frictione servata. CHAP. XV.

TREATMENT OF A QUARTAN FEVER.

THE same observations are applicable in a quartan (fever). But as this is very tardy in its departure, unless it be dispelled on the first days, more diligence must be observed in our mode of treatment from the commencement. Therefore if fever accede with shivering, and then cease on the same day, and the next, and third day, he ought to restrain himself, and to drink hot water only on the first day after the fever; and for the next two days he must even debar himself of this as much as possible. If the fever return on the fourth day with shivering, let him vomit, as has been directed before; then after the fever to take moderate food, and a quarter of a pint of wine: on the following and third day, to abstain from every thing, except hot water if there be thirst. On the seventh day to anticipate the rigor by the bath; if the fever return, let an enema be administered; after which rest must be enjoined; and to be rubbed vehemently during the process of anointing, and to take food and wine in the same manner as before; for the next two days to observe friction and fasting. On the thirteenth day, again to try a

postea febris accessit, aequo perficari, vinum copiosius bibere. Ac sic proximum est, ut quies tot dierum, et abstinentia cum ceteris, quae praecipiuntur, febrem tollant. Si vero nihilominus remanet, aliud ex toto sequendum est curationis genus; idque agendum, ut, quod diu sustinendum est, corpus facile sustineat. Quo minus etiam curatio probari Heraclidis Tarentini debet, qui primis diebus ducendam alvum, deinde abstinendum in septimum diem dixit. Quod, ut sustinere aliquis possit, tamen, etiam febre liberatus, vix refectioni valebit: adeo, si febris saepius accesserit, concidet. Igitur si tertio decimo die morbus manebit, balneum neque ante febrem, neque post cam tentandum erit; nisi interdum jam horrore discusso: horror ipse per ea, quae supra scripta sunt, expugnandus. Deinde post febrem oportebit ungus, et vehementer perficari; cibum et validum, et fortiter assumere; vino uti quantum libebit: postero die, cum satis quieverit, ambulare, exerceri, ungi, perficari fortiter, cibum capere sine vino: tertio die abstinere.

TRANSLATION.

bath, and if the fever come on afterwards to be rubbed as before, and to drink wine more copiously. Thus it usually happens, that rest of so many days, and abstinence, together with those injunctions above-mentioned, remove the fever. But if it still remain, another mode of treatment must be pursued; and all our energies must tend to this, that the body may support easily, that which is to be supported long. For this reason the practice of Heraclides of Tarentum is the less worthy of approbation, who prescribed injections in the beginning, afterwards abstinence till the seventh day. Which although some may be able to sustain, yet, even being freed from fever, he will scarcely be able to recover; so that if fever return, he will fall a victim of exhaustion. Therefore if the disease shall remain on the thirteenth day, the bath must be used neither before nor after it; unless sometimes the rigors being dissipated, which we must combat against by the means already described. Then, after the fever, it will be necessary to be anointed and rubbed violently; and to take abundance of substantial food; wine without restraint; on the following day, when he has rested sufficiently, to walk, to be exercised, to be anointed, to be rubbed forcibly, to take food without wine: on the third day abstinence.

But the day on which he shall expect the fever, he ought to rise before the ac-

ram, ut in ipsam exereitationem febris tempus incurrat: sic enim saepe illa discutitur. At si in opere oecupavit, tum demum se recipere. In ejusmodi valetudine, medicamenta sunt, oleum, frictio, exercitatio, eibus, vinum. Si venter adstrictus est, solvendus est.

Sed haec facile validiores faciunt: si imbecillitas oecupavit, pro exercitacione gestatio est: si ne hanc quidem sustinet, adhibenda tamen frictio est: si haec quoque vehemens onerat, intra quietem et unetionem et eibum sistendum est: dandaque opera est, ne qua cruditas in quotidianam id malum verat. Nam quartana neminem jugulat: sed si ex ea faeta quotidiana est, in malis æger est: quod tamen, nisi culpa vel ægri vel curantis, numquam fit.

ORDO.

TRANSLATION.

cession, to take excreise, and to endeavour that the time of the fever be occupied in the exereise itself: for in this manner it is often dissipated. But if he be overtaken in his exereise, he ought then to withdraw. The remedies, in diseases of this kind, are, oil, friction, exercise, food, and wine. If the bowels be constipated, they must be relieved.

Now very strong persons can sustain these things easily; yet where debility prevails, gestation must take the place of exereise; if he cannot even sustain this, let him be rubbed: if this also be too violent, it must be limited to rest, unetion and nouishment; and eare must be taken, lest any indigestion convert the malady into a quotidian. For a quartan never destroys any one; but if it prove to be the basis of a quotidian, the patient is then in a bad way: which very rarely happens, except from the negligence of either the patient or his physieian.

applied; therefore he must either rest entirely, or, if that be impracticable, to walk gently; to sit down with the feet and head carefully wrapped up; as often as the fever comes and goes, to take food and wine in moderation; to abstain in the interim, unless there be much debility. But if the two paroxysms almost unite, let him take food after each: then, in the mean time, to move a little, and after unction to take food. But since a rebellious quartan rarely terminates except in spring, it ought to be more particularly attended to at that time, lest any thing be done to impede recovery. An inveterate quartan is benefited by an occasional change of food; passing from wine to water, from water to wine, from mild food to acrid, from acrid to mild: to eat radish and then vomit; to relax the bowels with chicken broth; to add some of the calefactives to the oil used in friction; before an accession to take, either two glasses of vinegar, or one of mustard with three of Greek salt wine; or pepper, castor, assafœtida, and myrrh, mixed in equal proportions, and diluted with water.

For by these and the like remedies the body must be stimulated, that a change may be effected from that state in which it is detained. If the fever have yielded, it will be necessary to remember its paroxysmal period for a long time; and on

CHAP. XVII.

TREATMENT OF QUOTIDIAN FEVER ARISING FROM A QUARTAN.

Now if a quartan fever have been aggravated into a quotidian, since this might have happened by maltreatment, it is proper that he abstain for the space of two days and to use friction; to give only water to drink in the evening. It often happens that the fever does not accede on the third day: but whether it has or has not been, food must be given after the time of the acession; and if it remain, the strictest abstinence possible must be enjoined for the space of two days, and daily friction.

CHAP. XVIII.

THE SEVERAL SPECIES OF INSANITY, AND ITS TREATMENT.

THE treatment of fevers being now explained; there remain other affections of the body which supervene upon these; to which I shall immediately subjoin those which cannot be assigned to any particular part.

I will begin with INSANITY and proceed to that species of it which is both acute, and occurring in fever: the Greeks call it PHRENSY. It is of the utmost importance to know, that sick persons sometimes become delirious and talk incoherently in the paroxysm. Which indeed is not a trifling symptom, nor can it happen except in violent fever: yet it is not always equally fatal; for it is generally accustomed to be short, and the violence of the paroxysm being relieved, reason resumes its wonted functions. Nor does this disease require any other remedy than that which I have already prescribed in the treatment of fever.

Now phrenzy is established when the incoherence begins to be permanent; or, when the patient still has his reason, yet he admits some extravagant chimeras:

fecta est, ubi mens illis imaginibus adieta est. Ejus autem plura genera sunt: siquidem ex phreneticis alii hilares, alii tristes sunt; alii facilius continentur, et intra verba desipiunt, alii consurgunt, et violenter quædam manu faciunt; atque ex his ipsis, alii nihil nisi impetu peccant, alii etiam artes adlibent, summamque speciem sanitatis in captandis malorum operum occasionibus præbent; sed exitu deprehenduntur.

Ex his autem eos, qui intra verba desipiunt, aut leviter etiam manu peccant, onerare asperioribus coercitionibus supervacuum est: eos vero, qui violentius se gerunt, vincere convenit; ne vel sibi vel alteri noceant. Neque credendum est, si vincetus aliquis, dum levari vinculis cupit, quamvis prudenter et miserabiliter loquitur; quoniam is dolus insanientis est.

Fere vero antiqui tales ægros in tenebris habebant; eo quod illis contrarium esset, exterreri, et ad quietem animi tenebras ipsas conferre aliquid judicabant. At Asclepiades, tamquam tenebris ipsis terribus, in lumine habendos eos dixit. Neutrum autem perpetuum est: alium enim lux, alium te-

ORDO.

fecta ubi mens est addicta illis imaginibus. Antem sunt plura genera ejus: siquidem ex phreneticis alii sunt hilares, alii tristes: alii continentur facilis, et desipiunt intra verba, alii consurgunt, et faciunt quædam violenter manu: atque ex his ipsis, alii nihil peccant nisi impetu, alii etiam adhibent artes que præbent summam speciem sanitatis in captandis occasionibus operum malorum; sed deprehenduntur exitu.

Antem ex his est supervacuum onerare asperioribus coercitionibus eos qui desipiunt intra verba, aut etiam peccant leviter manu: vero convenit vineire eos qui gerunt se violentius, ne noceant, vel sibi vel alteri. Neque est credendum, si aliquis vinclitus, quamvis loquitur prudenter et miserabiliter, dum euipit levare vineulis: quoniam is est dolus insanientis.

Vero antiqui fere habebant tales ægros in tenebris; eo quod esset contrarium illis exterreri, et judicabant tenebras ipsas conferre aliquid ad quietem animi. At Asclepiades, tanquam tenebris ipsis terribus, dixit eos habendos in lumine. Autem neutrum est perpetuum: cuim lux alium, tenebrae turbant ma-

TRANSLATION.

and when the mind becomes addicted to those images, phrenzy is complete. But there are many species of it; for of phrenetics, some are merry, others sad; some are easily restrained, and rave only in words, others get up and commit acts of violence; and of these last, some attack openly, others even make use of cunning, and exhibit the most consummate appearance of sanity in seizing opportunities of doing mischief; but they are detected by the issue.

Now it is unnecessary to oppress those with very harsh coercive measures, whose malady only extends to words, or even trifling assaults with their hands: but it is proper to confine those who conduct themselves violently, lest they may injure, either themselves or any other person. Neither should any one of them be trusted, who, in order to be freed from his bonds, will speak prudently, and even in a pitiful strain: for this is the cunning of madness.

Such patients were generally kept in dark chambers by the ancients; on this account, because it might be injurious to them to be terrified; and they judged, that darkness of itself contributed in some degree to tranquillize the mind. Asclepiades said they ought to be kept in the light, as if the darkness itself excited terror. Neither the one, nor the other is without exception; for the light disturbs

nebrae magis turbant; reperiunturque, in quibus nullum discrimen deprehendi, vel hoc, vel illo modo possit. Optimum itaque est, utrumque experiri; et habere eum, qui tenebras horret, in luce; eum, qui lucem, in tenebris. At ubi nullum tale discrimen est, æger, si vires habet, loco lucido; si non habet, obscuro continendus est.

Remedia vero adhibere, ubi maxime furor urget, supervacuum est: simul enim febris quoque inerescit. Itaque tum nihil nisi continuendus æger est: ubi vero res patitur, festinanter subveniendum est. Asclepiades perinde esse dixit, his sanguinem mitti, ac si truidentur; rationem hanc secutus, quod neque insaniam esset, nisi febre intenta; neque sanguis, nisi in remissione ejus, recte mitteretur. Sed ipse in his somnum multa frictione quæsivit; cum et intentio febris somnum impedit, et frictio non nisi in remissione ejus utilis sit. Itaque hoc quoque auxilium debuit præterire. Quid igitur est? Multa in præcipiti periculo recte fiunt, alias omittenda. Et continua quoque febris habet tempora, quibus, etsi non remittit, non tamen crescit: estque hoc, ut non optimum, sic tamen secundum

ORDO.

gis alium; que reperiuntur in quibus nullum discrimen possit deprehendi vel hoc vel illo modo. Itaque est optimum experiri utrumque; et habere eum, qui horret tenebras, in luce; eum qui lueam, in tenebris. At ubi est nullum tale discrimen, æger est continuendus, si habet vires, lucido loco: si non habet, obscuro.

Vero est supervacuum adhibere remedia ubi furor urget maxime: enim simili febris quoque inerescit. Itaque tum nihil nisi æger continendus: vero nbi res patitur, est subveniendum festinanter. Asclepiades dixit, sanguinem mitti his, esse perinde ac si tuncidentur: securus hanc rationem, quod neque insaniam esset, nisi febre intenta; neque sanguis mitteretur recte, nisi in remissione ejus. Sed ipse quævit somnum in his multa frictione; cum et intentio febris impedit somnum, et frictio non sit utilis nisi in remissione ejus. Itaque debnit quoque præterire hoc auxilium. Quid igitur est? Multa fiunt recte in præcipiti periculo, alias omittenda. Et quoque continua febris habet tempora, quibus, etsi non remittit, tamen non crescit; que hoc, ut non optimum, sie tamen se-

TRANSLATION.

some, others are perturbed more by darkness; and some are to be met with, in whom no difference can be observed in either mode. Therefore it is best to try each; and to keep him in the light, who dreads darkness; and to keep him in darkness, who dreads the light. But where there is no such distinction, if the patient have strength, he must be kept in a lucid chamber, if he have not, in a dark one.

Now it is superfluous to apply remedies when the furor oppresses most: for the fever also increases at the same time. Therefore, nothing is to be done then, but to keep the patient under restraint: but when the case admits of relief, no time should be lost. Asclepiades has characterized blood-letting in such cases to be tantamount to murder; upon this principle, that there is no insanity except in the height of the paroxysm, nor can blood be taken with propriety except in the remission of it. But Asclepiades himself endeavoured to procure sleep in those cases by much friction: although both the violence of the fever prevents sleep, and friction cannot be used except in its remission. Therefore he ought to have omitted this remedy. What then is to be done? Many things are justifiable in being done in imminent danger, which at other times ought to be omitted. Even continued fever has certain times, in which, although it does not remit, yet it does not increase; and this, although not the best, yet it is a favourable time for remedies.

remediis tempus. Quod si vires ægri patiuntur, sanguis quoque mitti debet. Minus deliberari potest, an alvus duendam sit. Tum, interposito die, convenit caput ad cutem tondere; deinde aqua fovere, in qua verbenaæ aliquæ decoctæ sint ex reprimentibus; aut prius fovere, deinde tondere, et iterum fovere; ac novissime rosa caput naresque implere: offerre etiam naribus rutam, ex acetato contritam; movere sternutamenta medicamentis in id efficacibus. Quæ tamen facienda sunt in iis, quibus vires non desunt. Si vero imbecillitas est, rosa tantum caput, adjecto serpylo, similive aliquo, madefaciendum est. Utiles etiam in quibuscumque viribus herbæ duæ sunt, solanum et muralis, si simul ex utraque succo expresso caput impletur. Cum sc̄ febris remiserit, frictione utendum est; pareius tamen in iis, qui nimis hilares, quam in iis, qui nimis tristes sunt.

Adversus omnium autem sic insanientium animos gerere se pro eujusque natura necessarium est. Quorumdam enim vani metus levandi sunt; sicut in homine prædivite famei timente incidit, cui subinde falsæ hæreditates nuntiabantur: quorumdam audacia eoer-

ORDO.

enidum tempus remediis. Quod si vires ægri patiuntur, sanguis debet quoque mitti. Potest minis deliberari, an alvns sit duendam. Tum die interposito, convenit tondere caput ad cutem; deinde fovere aqua in qua aliqua verbenaæ decoctæ sint ex reprimentibus; aut prins fovere, deinde tondere, et iterum fovere; ac novissime implere caput que nares rosa; etiam offerre rutam contritam ex acetato naribus; movere sternutamenta medicamentis efficacibus in id. Quæ tamen sunt facinnt in iis, quibus vires non desunt. Vero si est imbecillitas, caput est tantum madefaciendum rosa, serpylo, ve aliquo simili adjecto. Etiam sunt dñæ herbae utiles in quibuscumque viribus, solanum et muralis, si caput impletur succo expresso ex utraque simul. Cum febris remiserit se, est utendum frictione; tamen pareius in iis qui sunt nimis hilares, quam in iis qui sunt nimis tristes.

Autem est necessarium gerere se sie adversus animos omnium insanientium pro natura enjusque. Enim vani metus quorumdam sunt levandi; sicut incidit in prædivite homine timente famem, cui subinde false hereditates nuntiabantur: andacia quorundam est coereenda; sicut fit in

TRANSLATION.

But if the patient's strength permit, he ought to be bled. It requires less deliberation on the administration of injections. Then after the interposition of a day, it will be proper to shave the head; afterwards to foment it with water in which vervains have been boiled with some astringent remedies; or to foment it first, then to remove the hair, and again foment, and lastly to embrocate the head and nostrils with rose oil; to hold rue also to the nostrils, bruised in vinegar, and to excite sneezing by medicines possessing that property. Such is the treatment to be adopted towards those who are not debilitated. But if there be weakness, the head is only to be moistened with rose oil, to which some wild thyme or something similar has been added. There are also two herbs useful in any degree of strength, the nightshade and the wall-pellitory, the expressed juice of each to be applied on the head. When the fever has remitted, we must use friction; but more sparingly in those who are merry, than in those who are very sad.

But it is necessary to conduct ourselves in such a manner towards all those insane persons, compatible to the nature, disposition, and habits of each. For the groundless apprehensions of some must be alleviated: as it happened in the case of a very rich man who dreaded starvation, and to whom hypothetical possessions were announced from time to time: the audacity of others requires coereion; as it

cenda est; sicut in iis fit, in quibus continendis plagæ quoque adhibentur: quorumdam etiam intempestivus risus objurgatione et minis finicodus: quorumdam discutiendæ tristes cogitationes; ad quod symphoniacæ, et cymbala, strepitusque proficiunt. Sæpius tamen assentiendum, quam repugnandum est; paulatimque, et non evidenter, ab iis, quæ stulte dicentur, ad meliora mens adducenda. Interdum etiam elicienda ipsius intentio; ut fit in hominibus studiosis litterarum, quibus liber legitur, aut recte, si delectantur, aut perperam, si id ipsum eos offendit: emendando enim convertere animum incipiunt. Quin etiam recitare, si qua meminerunt, cogendi sunt. Ad cibum quoque quosdam non desiderantes reduxerunt ii, qui inter epulantcs eos collocarunt. Omnibus vero sic affectis somnus et difficilis, et præcipue necessarius est: sub hoc enim plerique sanescunt. Prodest ad id, atque etiam ad mentem ipsam componendam, crocinum unguentum cum irino in caput datum. Si nihilominus vigilant, quidam somnum moliuntur potui dando aquam, in qua papaver, aut hyoscyamus decocta sit: alii mandragoræ mala pulvino subjiciunt: alii

ORDO.

iis, in quibus continendis quoque plagæ adhibentur: etiam intempestivus risus quorundam est finiendus objurgatione et minis: tristes cogitationes quorundam discutiendæ, ad quod symphoniacæ, et cymbala, que strepitus proficiunt. Tamen est assentiendum sæpius, quam est repugnandum; que mens est adducenda paulatim, et non evidenter, ab iis quæ dicantur stulte, ad meliora. Interdum etiam intentio ipsius elicienda; ut fit in hominibus studiosis litterarum, quibus liber legitur, aut recte si delectantur, aut perperam, si id ipsum offendit eos: enim incipiunt convertere animum emendando. TRANSLATION.

is done in those persons, restraining whom, even stripes are applied. The irrational laughter of some is to be restrained by reproof and threats: the melancholy of others is to be relieved by symphonies, cymbals, and noise. Yet we should assent to them, more frequently, than oppose them; and the mind is thus, gradually, and insensibly brought from an irrational to a more rational method of discourse. Sometimes the mental energies of the patient are to be elicited; as is done with literary men, to whom a book is read, either with a propriety of accentuation, if they be pleased with it, or in a perverted manner if that itself offend them: for by their emendations they begin to reason. If they remember any thing, they should be induced to recite it. Some have been brought to eat, who had previously refused, by being placed among persons banqueting. To all persons so affected, sleep is not only difficult to be obtained, but particularly necessary; for after this most of them begin to recover. Saffron ointment with iris-oil applied on the head, aids in procuring sleep, and also in tranquillizing the mind itself. If however they continue vigilant, some procure sleep by giving them a decoction of poppies or henbane to drink; others place mandrake apples under the pillow: others apply to

vel ammonum, vel sycamini lacrymam fronti inducunt. Hoc nomen apud medicos reperio: sed cum Graeci morum συκαμινος appellant, mori nulla laerima est. Sic vero significatur lacryma arboris in Aegypto nascentis, quam ibi μοροσύκον appellant. Plurimi decoctis papaveris corticibus, ex ea aqua spongia os et caput subinde foveant. Asclepiades ea supervacua esse dixit; quoniam in lethargum saepe converterent. Praeccepit autem, ut primo die, a cibo, potionē, somno abstineretur; vespere ei daretur potui aqua; tum frictio admoveatur lenis, ut ne manum quidem, qui perfriaret, vehementer imprimaret; postero deinde die, iisdem omnibus factis, vespere ei daretur sorbitio et aqua, rursusque frictio adhibetur: per hanc enim nos consecuturos, ut somnus accedat.

Id interdum fit, et quidem adeo, ut, illo confidente, nimia frictio etiam lethargi periculum afferat. Sed si sic somnus non accessit, tum demum illis medicamentis arcessendus est: habita scilicet eadem moderatione, quae hic quoque necessaria est, ne, quem obdormire volumus, excitare postea non pos-

Etiam si-

TRANSLATION.

the forehead either ammonium or the sycamine tear. I find this name in the writings of physicians: but although the Greeks call the mulberry, sycamorus, yet there is no tear of this tree: but this term they apply to a tree growing in Egypt, which they call there morosykon. Many persons boil the rind of poppies in water, and foment the mouth and head occasionally with a sponge dipped in this decoction. Asclepiades has pronounced these to be injurious, since they often convert the disease into a lethargy. But on the first day he enacts abstinence from food, drink, and sleep; in the evening to give him water to drink; then gentle friction to be applied, but in so light a manner, that even the hand which rubs must not be pressed violently: then on the following day the same to be repeated, and in the evening water and gruel should be given to him, and again friction applied: for by these means we may procure sleep.

This effect indeed may happen sometimes, according to his own admission, that too much friction may produce lethargy. But if sleep have not been procured by these means, then we must have recourse to those above named: especially observing the same moderation which is so necessary here, lest we may not be able to

simus. Confert etiam aliquid ad somnum silanus juxta cadens; vel gestatio post cibum, et noctu; maximeque suspensi lecti motus.

Neque alienum est, si neque sanguis ante missus est, neque mens constat, neque somnus accedit, oecipitio inciso eucurbitulam admovere; quæ quia levat morbum, potest etiam somnum facere. Moderatio autem in cibo quoque adhibenda est: nam neque implendus æger est, ne insaniat; neque jejunio utique vexandus, ne imbecillitate in cardiacum incidat. Opus est cibo infirmo, maximeque sorbitione, potionē aquæ mulsæ, cuius ternos cyathos bis hieme, quater aestate dedisse satis est.

Alternum insaniae genus est, quod spatium longius recipit; quia fere sine febre incipit, leves deinde febriculas excitat. Consistit in tristitia, quam vindetur bilis atra contrahere. In hac utilis detractio sanguinis est: si quid hanc prohibet, prima est abstinentia; secunda, per album veratrum vomitumque purgatio. Post utrumlibet, adhibenda bis die frictio est; si magis valet, frequens etiam exercitatio; in jejuno vomitus: cibus, sine vino, dandus ex

Est alterum genus insaniae quod recipit longius spatiū, quia fere incipit sine febre, deinde excitat leves febriculas: consistit in tristitia, quam atrabilis videtur contrahere. In hac, detractio sanguinis est utilis: si quid prohibet hanc, abstinentia est prima, purgatio per album veratrum que vomituni secunda. Post utrumlibet frictio est adhibenda bis die: si valet magis, etiam frequens exercitatio: vomitus in jejuno. Cibus ex media materia est dandus sine vino;

TRANSLATION.

rouse the patient whom we wish to sleep. A easade falling near the patient conduces to lull the senses asleep, or gestation at night after food, and especially the motion of a suspended bed.

Nor is it improper, if blood have not been previously let, to apply the cupping glasses to the incised occiput when there is continued vigilance and delirium, which will relieve the disease and may procure sleep. But moderation in food must be attended to: for the patient ought neither to be replenished, lest he become insane, nor, indeed is he to be tortured with hunger by abstinence, lest he fall a victim to the cardiac disease (4) from debility. He must take weak food, especially gruel, and drink hydromel, of which it will be sufficient to give three glasses, twice in winter, and four times in summer.

There is another species of insanity which admits of a longer duration, because for the most part it begins without fever, afterwards it excites slight fevers: it consists of sadness, which seems to proceed from atrabilis. Blood-letting in this is beneficial: if any circumstance impede this, the first remedy is abstinence, the second is to purge with white hellebore and a vomit. After either of these remedies, friction must be administered twice a day; if he be vigorous, frequent exercise also: and a vomit on an empty stomach. Food of the middle class is to be given

media materia est. Quam quoties posuero, scire licet, etiam ex infirmissima dari posse; dum ne ea sola quis utatur: valentissima tantummodo esse removenda. Praeter haec, servanda alvus est quam tenerima; removendi terrores, et potius bona spes afferenda; querenda deleetatio ex fabulis, ludisque, quibus maxime eapi sanus assueverat; laudanda, si qua sunt, ipsius opera, et ante oculos ejus ponenda; leviter objurganda vana tristitia; subinde admonendus, in iis ipsis rebus, quae sollicitant, eur non potius laetitiae, quam sollicitudinis causa sit. Si febris quoque accessit, sicut aliæ febres euranda est.

Tertium genus insaniae est ex his longissimum; adeo ut vitam ipsam non impedit: quod robusti corporis esse consuevit. Hujus autem ipsius species duæ sunt. Nam quidam imaginibus, non mente falluntur; quales insanientem Ajaceem vel Orestem perequasse poetæ ferunt: quidam animo desipiunt. Si imagines fallunt, ante omnia videntum est, tristes, an hilares sint. In tristitia, nigrum veratrum dejectionis causa; in hilaritate, album, ad vomi-

ORDO.

quam quoties posuero, licet scire etiam ex infirmissima posse dari, dum quis ne utatur ea sola: tantummodo valentissima esse removenda. Praeter haec, alvus est servanda quam tenerima; terrores removendi, et potius bona spes afferenda; deleetatio querenda ex fabulis que ludis, quibus sanus assueverat capi maxime; si sunt qua opera ipsius, laudanda, et ponenda ante oculos ejus; vana tristitia objurganda leviter; subinde admonendus, in his rebus ipsis, quae sollicitant, emeritum protinus causa laetitiae, quam sollicitudinis. Si febris quoque accessit, est curanda sicut aliæ febres.

Tertium genus insaniae est longissimum ex his, adeo ut non impedit vitam ipsam; quod consuevit esse robusti corporis. Autem sunt duas species hujus ipsius; nam quidam falluntur imaginibus, non mente; quales poetæ ferunt Ajacem vel Orestem insanientem percepisse: quidam desipiunt animo. Si imagines fallunt, ante omnia est videndum sint tristes an hilares. In tristitia, nigrum veratrum debet dari causa dejectionis in hilaritate, album ad vomitum excitandum:

TRANSLATION.

without wine: which as often as I have mentioned this last term I wish it to be understood that it is the weakest may be given, provided the patient be not confined to that alone: that the most nutritious are withheld only. In addition to these, the bowels must be kept as open as possible; all terrors must be removed, and rather good prospects held out: cheerful entertainment must be sought for out of fabulous tales and sports, with which he used to be most delighted, when in health: if there be any of his own works, they must be extolled, and placed before him: his unfounded apprehensions are to be reproved in a mild manner: he must be occasionally admonished about those very things themselves which render him anxious, why there may not be cause of gladness rather than of anxiety. If fever also have acceded, it is to be treated as other fevers.

The third species of INSANITY is the longest of these, yet it does not seem to impede the vital functions; and which is incident to a robust constitution. But there are two species of this itself; for some are deceived by the conjurations of a heated imagination, not from a disordered mind; such were the ravings of Ajax and Orestes (5) as related by the poets; others are disordered in their reason. If phantoms mislead the mind, first of all must be observed whether they be sad or merry. In sadness black hellebore ought to be given as a purgative; but in the

tum excitandum, dari debet: idque, si in potionē non accipit, pani adjiciendum est, quo facilius fallat. Nam si bene se purgaverit, ex magna parte morbum levabit. Ergo etiam si semel datum veratrum parum proficerit, interposito tempore iterum dari debet. Neque ignorare oportet, leviorem esse morbum cum risu, quam serio insanientium. Illud quoque perpetuum est in omnibus morbis; ubi ab inferiore parte purgandus aliquis est, ventrem ejus ante solvendum esse; ubi a superiore, comprimendum.

Si vero consilium insanientem fallit, tormentis quibusdam optime curatur. Ubi perperam aliquid dixit, aut fecit, fame, vinculis, plagis coercendus est. Cogendus est et attendere, et ediscere aliquid, et meminisse: sic enim fact, ut paulatim metu cogatur considerare, quid faciat. Subito etiam terreri, et expavescere, in hoc morbo prodest; et fere quidquid animum vehementer perturbat. Potest enim quædam fieri mutatio, cum ab eo statu mens, in quo fuerat, abducta est. Interest etiam, is ipse sine causa subinde rideat, an moestus demissusque sit: nam demens hilas-

ORDO.

que id est adjiciendum pani, si non accipit in potionē, quo fallat faelius: nam si purgaverit se bene, levabit morbum ex magna parte. Ergo etiam si veratrum datum semel proficerit parum, tempore interposito, debet dari iterum. Neque oportet ignorare, inorbum eum risu esse leviorem quam insanientium serio. Illud quoque est perpetuum in omnibus morbis, ubi aliquis est purgandus ab inferiore parte, ventrem ejus esse solvendum ante, ubi a superiore, comprimendum.

Vero si consilium fallit insanientem, evratur optime quibusdam tormentis. Ubi dixit aut fecit aliquid perperam, est eo reendus fame, vinculis, plagis. Est cogendus et attendere, et ediscere aliquid, et meminisse enim sic fiet, nt paulatim cogatur metu considerare quid faciat. Etiam prodest in hoc morbo terreri subito et expaveseere; et fere quidquid perturbat animum vehementer. Enim quædam mutatio potest fieri quum mens abdueta est ab eo statu in quo fuerat. Etiam interest is ipse rideat subinde sincausa, an sit moestus que demissus: nam demens hilas-

TRANSLATION.

merry species white hellebore to excite vomiting: and that must be added to bread, if the patient will not take it in a potion; by which he may be the more easily deceived: for if he be well purged, it will in a great measure relieve the disease. Therefore if the first administration of the white hellebore have benefited little, after some interval it ought to be repeated. Neither should we be ignorant, that this disease is more mild when attended with laughter, than with melancholy. It is an established principle in the treatment of all diseases, when a patient is to be purged in the inferior parts, that his bowels must be opened first, if upwards they must be confined.

But if it be mental alienation, some are best cured by correction. When he has said or done any thing wrong, he must be chastised by hunger, chains, and stripes. He must be made to attend, and to learn off something that he may remember: for by this it will happen, that by degrees he will be led to consider what he may be doing. It is also beneficial in this malady to be put into sudden dread, and in general whatever disturbs the mind by a violent shock. For a change may be effected when the mind is withdrawn from that state in which it had been. It is also of some importance, whether the patient himself may laugh occasionally without any cause, or whether he be sad and dejected: for the hilarity of insanity is

ritas terroribus iis, de quibus supra dixi, melius curatur: si nimia tristitia est, prodest lenis, sed multa bis die frictio; item per caput aqua frigida infusa, demissumque corpus in aquam et oleum.

Illa communia sunt: insanentes vehementer exerceri debere; multa frictione uti; neque pinguem carnem, neque vinum assumere; eibis uti post purgationem, ex media materia, quam levissimis; non oportere esse vel solos, vel inter ignotos, vel inter eos, quos aut contemnunt, aut negligant; mutare debere regiones, et si mens reddit, annua peregrinatione esse jactandos. Raro, sed aliquando tamen, ex metu delirium nascitur. Quod genus insanientium, specie simile, similique virtus genere curandum est: praeterquam quod in hoc insaniae genere solo recte vinum datur.

ORDO.

ritas curatnr uelins his terroribus de quibus dixi supra. Si est nimia tristitia, lenis, sed multa frictio, bis die, prodest: item frigida aqua infusa per caput, que corpus demissum in aquam et oleum.

Illa sunt communia, insanientes debere exerceri vehementer; uti multa frictione; neque assumere pinguem carnem, neque vinum; post purgationem uti cibis quam levissimis ex media materia; non oportere esse vel solos, vel inter ignotos, vel inter eos quos aut contemnunt, aut negligunt; debere mutare regiones, et si mens reddit, esse jactandos annua peregrinatione. TRANSLATION.

treated better by those terrors which I have mentioned above. If it be an extreme case of sadness, gentle, but long continued friction twice a day does good: also cold water poured over the head, and the body lowered into water and oil.

It is a general rule for insane persons to be exercised violently; to apply long continued friction; neither to eat fat meat nor wine; after purging to take the lightest possible food from the middle class: that they ought neither to be alone, nor among strangers, nor those whom they either despise, or regard with indifference: that they ought to change their climates, and if reason return, to be exercised by an annual peregrination. It does happen, though rarely, that insanity is the result of terror, which genus of insanity is of a similar species (*to that last mentioned*), and to be treated by similar diet: except that in this kind of insanity alone, wine may be administered with advantage.

CHAP. XIX.

THE CARDIACUS AND ITS TREATMENT.

THAT disease called by the Greeks cardiacus, is very different to these latter diseases, although phrenetic cases very often degenerate to it: for the mind in *that* is

tici transeunt: siquidem mens in illis labat, in hoc constat. Id antem nihil aliud est, quam nimia imbecillitas corporis, quod, stomacho languente, immobile sudore digeritur. Licetque protinus scire id esse, ubi venarum exigui imbecillique pulsus sunt; sudor autem supra consuetudinem, et modo, et tempore, ex toto thorace, et cervicibus, atque etiam capite prorumpit, pedibus tantummodo, et cruribus siccioribus, atque frigentibus. Acutique morbi genus est.

Curatio prima est, supra praecordia imponere, quae reprimant, cataplasma: secunda, sudorem prohibere. Id praestat acerbum oleum, vel rosa, vel melinum, aut myrtleum: quorum aliquo corpus leniter perungendum, ceratumque ex aliquo horum tum imponendum est.

Si sudor vincit, delinendus homo est vel gypso, vel argenti spuma, vel Cimolia creta, vel etiam subinde horum pulvere respergendorum. Idem praestat pulvis ex contritis aridi myrti vel rubi foliis, aut ex austeri et boni vini arida face: pluraque similia sunt, quae si desunt, satis utilis est quilibet ex via pulvis injectus. Super haec vero, quo minus corpus insudet, levi veste debet esse

ORDO.

bis; quamvis phrenetici saepe transeunt ad eum: signidem mens labat in illis, in hoc constat. Autem id est nihil aliud quam nimia imbecillitas corporis, quod, stomacho languente, digeritur immobile sudore: que licet protinus scire id esse, nbi pulsus venarum sunt exigui que imbecilli; antem sudor prorumpit supra consuetudinem, et modo, et tempore, ex toto thorace, et cervieibus, atque etiam capite, tantummodo pedibus et cruribus siccioribus atque frigentibus: que est genus acuti morbi.

Prima curatio est, imponere cataplasma, quae reprimant supra praecordia: secunda, prohibere sudorem. Acerbum oleum, vel rosa, vel melinum, aut myrtleum praestat id: aliquo quorum corpus perungendum leniter; que ceratum ex aliquo horum est tum imponendum.

Si sudor vincit, homo est delinendus vel gypso, vel spuma argenti, vel Cymolia creta; veletiam respergendorum subinde pulvere horum. Pulvis ex contritis foliis aridi myrti vel rubi praestat idem, aut ex arida face austri et boni vini: que sunt plura similia quae, si desunt, quilibet pulvis ex via injectus est satis utilis. Vero super haec, quo corpus insudet minus, debet esse cunctus levi

TRANSLATION.

disordered, in *this* it is sound. But that is nothing else than excessive debility of body, which is exhausted by colliquative perspiration, the stomach being languid: and we may know that immediately to be the case, when the pulsation of the arteries are small and weak; when the sweat bursts forth excessively, both in quantity and duration, over the whole chest and neck, and even the head, the feet and legs only remain dry and cold:—this is the acute form of the disease.

The first treatment is to apply astringent cataplasms over the praecordia; the second is to moderate the perspiration. This is accomplished by bitter oil, either of the rose, the quince, or myrtle oil, with either of which the body must be anointed gently; and then a cerate composed of any of these is to be laid on.

If the perspiration still hold out, the patient must be smeared over with gypsum or with litharge, or Cimolian chalk; or even to be sprinkled occasionally with the powder of these. The dried powder of myrtle or bramble leaves have the same property, or the dried lees of good, rough wine: and there are many other similar things, if those be wanting, any powder from the road-way being thrown on the part will be found sufficiently useful. But in addition to these things, in order that the body may sweat less, the patient ought to be covered with light clothing, not

conteetus, loeo non ealido, fenestris patentibus, sie, ut perflatus quoque aliquis aeedat.

Tertium auxilium est, imbecillitati jaceantis eib[us] vinoque sueurrere. Cibus non multus quidem, sed saepe tamen noete ae die dandus est; ut nutriat, neque oneret. Is esse debet ex infirmissima materia, et stomaeho aptus. Nisi si necesse est, ad vinum festinare nou oportet: si verendum est, ne deficiat, tum et intrita ex hoe, et hoe ipsum austern quidem, sed tamen tenue, meraeulum, egelidum subinde et liberaliter dandum est; adjeeta polenta, si modo is æger parum eibi assumit: idque vinum esse debet, neque nullarum virium, neque ingentium; reeteque tota die ae noete, vel tres heminas æger bibet; si vastius corpus est, plus etiam. Si eib[us] non aeeipit, perunctum ante perfundere aqua frigida eonvenit, et tum dare.

Quod si stomaehus resolutus parum eontinet, et ante eib[us], et post eum sponte vomere oportet; rursusque post vomitum eib[us] sumere. Si ne id quidem manserit, sorbere vini eyathum, interpositaque hora, sumere alterum. Si id quoque stomachus reddiderit, to-

ORDO.
veste, non calido loen, patentibus fenestris, sic ut quoque aliquis perflatus aeedat.

Tertium auxilium est suenrere imbecillitati jaccantis cibo que vino. Non multis eib[us] quidem est dandus; sed tamen saepe noete ac die; ut nutriat, neque oneret. Is debet esse ex infirmissima materia, et aptus stomaeho. Non oportet festinare ad vim, nisi si est necesse. Si est verendum, ne deficiat, tum et intrita ex hoe, et hoe ipsum austern quidem, sed tamen tenue, meraeulum, egelidum, est dandum subinde et liberaliter; polenta adjeeta, si modo is æger assunt parum eibi: que id vim debet esse neque nullarum, neque ingentium virium; qncæ æger bibet recte vel tres heminas tota die ac nocte; vel etiam plus, si corpus est vastius: si non aeeipit cibum, eonvexit perfundere pernatum frigida aqua ante, et tum dare.

Quod si stomachus resolutus eontinet parum, oportet vomere sponte et ante eib[us] et post cum; que rursus sumere eib[us] post vomitum. Siquidem id ne manserit, sorbere cyathum viui, que hora interposita, sumere alterum. Si stomaehus reddiderit id quo-

TRANSLATION.

in a warm place, but where he may have a gentle breeze blow over him with open windows.

The third remedy is to stimulate the patient with food and wine. Not much food must be given, but that should be frequent, both by day and night; so that it may nourish and not load. That ought to be of the weakest class, and adapted for the stomaeh. Wine must not be given too soon, unless there be necessity. If there be any fear of his fainting, then wine-panada, or even this itself, but ansterc, light, and a little diluted, may be given occasionally and freely, warmed a little, polenta (6) being added if the patient take but little food: and that wine ought neither to be very weak nor very strong; and the patient may very well drink three heminae (7) during the twenty-four hours; or even more, if he be a very big personage; if he will not receive food, it is proper that he be first anointed, and then the cold effusion, by submitting him to a stream of cold water, and then to give food.

But if the stomach be so debilitated, that scarcely any thing is retained, it behoves him to induce spontaneous vomiting both before and after food; and take food again after the vomit. If even this shall not remain, let him sip a glass of wine, and an hour having elapsed, to take another. If the stomach have rejected

tum corpus bulbis eontritis superillumen-dum est; qui, ubi inaruerunt, efficiunt, ut vinum in stomaeho contineatur, ex-que eo toti corpori calor, venisque vis redeat.

Ultimum auxilium est, in alvum ptisanæ vel aliaeæ eremorem ex inferioribus partibus indere: siquidem id quoque vires tuetur. Neque alienum est, nari-bus quoque aestuantis admovere, quod reficiat; id est rosam et vinum: et si qua in extremis partibus frigent, unetis et ealidis manibus fovere. Per quæ si consequi potuimus, ut et sudoris impe-tus minuatur, et vita prorogetur, incipit jam tempus ipsum esse præsidio. Ubi in tuto esse videtur, verendum tamen est, ne in eamdem imbecillitatem eito reeidat: itaque, vino tantum remoto, quotidie validiorem eibum debet as-sumere, donee satis virium corpori redeat.

ORDO.

que, totum corpus est superilli-nendum bnlbis contritis; qui, ubi inaruerunt, efficiunt ut vimini contineatur in stomaeho, que ex eo calor redeat toti corpori, que vis venis.

Ultimum auxilium est, inderc in alvum ex inferioribus partibus eremorem ptisauæ vel alicæ, si-quidem id quoqne tnetur vires. Neque est alienum quoque admov-vere naribus aestuantis quod refi-ciat, id est rosam et vimin: et, si qua in extremis partibus frig-ent, fovere uncis et calidis ma-nibus: per quæ si potuerimus con-sequi, ut et impetus sudoris minuatur, et vita prorogetur, jam tempus ipsum ineipit esse præsi-dio. Ubi videtur esse in tuto, tamen est verendum ne recidat eito in eamdem imbecillitatem: itaque, vino tantum remoto, debet assumere quotidie validiorem ci-bum, donec satis virium redeat corpori.

TRANSLATION.

that also, the whole body is to be smeared over with bruised bulbs; which, when they have become dry, enable the stomach to retain the wine, and by that, heat will be distributed to all parts of the body, and energy to the circulation.

The last remedy is, to introduce by the rectum the cream of ptisan or alica, for that also supports the strength. Neither is it improper also to apply something to the nostrils of a person oppressed with heat which may refresh him, that is the wine and rose: and, if the extremities be cold, let them be rubbed with warm anointed hands. By which means, if we have been able to obtain an ascendancy, both the violence of the perspiration may be diminished, and life prolonged, time itself and the efforts of nature at last effect a cure. Even when he seems to be out of danger, still there is ground for apprehension, lest he relapse into the same state of debility. Therefore with the exception of wine only, he ought to take stronger food daily, until the body acquire sufficient strength.

CAP. XX.

DE LETHARGICIS.

ALTER quoque morbus est, aliter phrenetico contrarius. In eo diffieilior somnus, prompta ad ommem audaciam mens est: in hoc mareor, et inexpugnabilis pene dormiendi necessitas. Λήθαγος Græei nominant. Atque id quoque genus aetum est, et nisi sueurritur, eeliter jugulat. Hos ægros quidam subinde excitare nituntur, admotis iis, per quæ sternutamenta evocantur, et iis, quæ odore foedo movent; qualis est pix eruda, lana sueida, piper, veratrum, castoreum, aeetum, allium, eepa. Juxta etiam galbanum inendunt, aut pilos, aut cornu cervinum; si id non est, quodlibet aliud. Hæc enim eum comburuntur, odorem foedum movent.

Tharrias vero quidam, accessionis id malum esse dixit, levarique, eum ea decessit: itaque eos, qui subinde excitant, sine usu male habere. Interest autem, in decessione expurgiseatur æger, an, cum febris non levatur, aut levata quoque ea somnus urgeat. Nam si exper-

CHAP. XX.

ON LETHARGY AND ITS TREATMENT.

THERE is also another disease, different in other respects to the phrenetic. In phrenzy, sleep is obtained with difficulty, and the mind is ready for any act of violence; but in *this*, there is a drowsiness and almost an irresistible necessity to sleep. The Greeks term it lethargy. This is also an acute disease, and unless speedily relieved, destroys life. Some endeavour to rouse such patients occasionally with those things which excite sneezing, and stimulate by their pungent odour, such as crude pitch, sordid wool, pepper, hellebore, castor, vinegar, garlic, onion. They also burn galbanum near them, hair, or hartshorn: or if there be none of these, any other horn; for when these things are burnt they give out a fetid odour.

But Tharrias has said that lethargy is the effect of a paroxysm, and that it is relieved when it has gone off: therefore those who are roused frequently, are maltreated to no purpose. But it is very important, whether the patient awake in the departure of the paroxysm, or whether this lethargic sleep continue to oppress him, the fever not being alleviated, or otherwise. For if he awake, it is useless to

giseitur, adhibere ei, ut sopito, supervacuum est: neque enim vigilando melior fit; sed per se, si melior est, vigilat. Si vero continens ei somnus est, utique excitandus est; sed iis temporibus, quibus febris levissima est, ut et excernat aliquid, et sumat.

Excitat autem validissime repente aqua frigida infusa. Post remissionem itaque, perunctum oleo multo corpus, tribus aut quatuor amphoris totum per caput perfundendum est. Sed hoc ute-
mur, si æqualis ægro spiritus erit, si mollia præcordia: sin aliter hæc erunt, ea potiora, quæ supra comprehensa sunt. Et, quod ad somnum quidem pertinet, commodissima hæc ratio est. Medendi autem causa, caput radendum; deinde posea foyendum est, in qua laurus, aut ruta deeoeta sit: altero die imponendum castoreum, aut ruta ex aeeto contrita, aut lauri baccae, aut hedera cum rosa et aceto. Præeipueque proficit, et ad ex-
citandum hominem, naribus admotum, et ad morbum ipsum depellendum, capiti frontive impositum sinapi. Gestatio etiam in hoc morbo prodest; maximeque opportune cibus datus, id est in remissione, quanta maxima inveniri poterit. Aptissima autem sorbitio est, donec morbus decrescere incipiat; sic,

ORDO.

est supervacuum adhibere ei ut sopito; enim neque sit melior vi-
gilando; sed si est melior, vigilat per se. Vero si est continuus somnus ei, utique est excitandus: sed iis temporibus quibus febris est levissima, ut et excernat et sumat aliquid.

Autem frigida aqua infusa re-
pente excitat validissime. Ita-
que post remissionem, corpus per-
unetum multo oleo, est perfundendū per totum caput, tribus
aut quatuor amphoris. Sed ute-
mnr hoc, si spiritus erit æqualis

bus incipiat decrescere; sic, ut

TRANSLATION.

administer to him as one asleep; for he gets no better by being awake; but if he be better, he will keep awake of his own accord. But if he remain in a continued sleep, then indeed he must be aroused, but at those times when the fever is lightest, so that he may excrete, and take some food.

Now cold water poured on suddenly, rouses most powerfully. Therefore after the remission, the body being anointed with much oil, three or four amphore of water should be poured over the whole head. But we can only use this when the respiration is equal, and the præcordia soft: but if these shall be otherwise, those things are preferable which are comprehended above. As to sleep, then, this is the most practicable mode of treatment. But for the cure of the disease, the head must be shaved; afterwards to be fomented with posea in which laurel or rue has been boiled: on the day following eastor is to be laid on, or rue bruised up with vinegar. Mustard will be particularly beneficial, by being applied to the nostrils in rousing the man, and by being laid on the head or forehead to dispel the disease itself. Also gestation profits in this disease; and particularly food being given seasonably, that is, in the greatest remission that can be found. Now gruel is most proper until the disease begin to decline; so, that if there be a severe pa-

ut si quotidie gravis accessio est, haec quotidie detur; si alternis, post gravorem, sorbitio, post leviorem, mulsa aqua. Vinum quoque cum tempestivo cibo datum non medioeriter adjuvat. Quod si post longas febres ejusmodi torpor aecessit, cetera eadem servanda sunt: ante accessionem autem, tribus quatuorve horis, castorum, si venter adstrictus est, mistum cum se ammonia; si non est, per se ipsum cum aqua dandum est. Si praecordia mollia sunt, cibis utendum est plenioribus; si dura, in iisdem sorbitionibus subsistendum; imponendumque præcordiis, quod simul et reprimat et emolliat.

ORDO.

si est gravis accessio quotidie, haec datur quotidie, si alternis, sorbitio, post graviorem, mulsa aqua post leviorem. Quoque vinum datum cum tempestivo cibo non adjuvat medioeriter. Quod si torpor ejusmodi aecessit post longas febres, cetera eadem sunt servanda: autem tribus ve quatuor horis ante acessionem; eas-torem est dandum mistum eum se ammonia, si venter est adstrictus; si non est, cum aqua per se ipsum. Si praecordia sunt mollia, est utendum plenioribus cibis: si dura, subsistendum in iisdem sorbitionibus; que imponendum præcordiis, quod simul et reprimat et emolliat.

TRANSLATION.

roxysm every day, this may be given daily; if on alternate days, gruel may be given after the more severe accession, honcied water after the lighter. Also the proper administration of wine with seasouable food assists very much. But if a torpor of this kind have aceeded after long fevers, the other remedies are to be preferred: but three or four hours before the accession, eastor is to be given mixed with se ammony, if the bowels be bound, if not, with water by itself. If the precordia be soft, stronger food must be taken; if hard, then the patient must be limited to the above-named gruels; and there must be something laid on the præcordia, which may repress and soften at the same time.

menter, est creber sonus intus ex motu spiritus: modo corpus est inaequale, tumoribus orientibus aliter atque aliter per totum id: modo aqua contrahitur intus in uterum, et corpore moto, moveatur ita, ut impetus ejus possit conspici. Græci nominarunt primum τυμπανίτην (tympanites); secundum λευκοφλεγματίαν (leucophlegmatia), vel ὑπὸ σάρκα (hyposarea): tertium ἀσκίτην (ascites). Tamen nimia abundantia humoris est communis omnium, ob quam nequidem ulcera sanescunt facile in his ægris.

Vero sæpe hoc malum incepit per se: sæpe supervenit alteri vetusto morbo, que maxime quartanæ. Tollitur facilis in servis, quam in liberis: quia, cum desideret famem, sitim, mille alia tædia, que longam patientiam, succurrunt promptius iis qui facile coguntur, quam quibus est inutilis libertas. Sed nequidem ii qui sunt sub alio, si non possunt temperare sibi ex toto, perducuntur ad sanitatem. Que ideo, non ignobilis medicus, discipulus Chrysippi, apud regem Antigonum, negavit quemdam amicum ejus, notæ intemperantiae, medio criter implicitum eo morbo, posse sanari. Que cum alter mediens, Philippus Epirotæ, pollicieretur se sanaturum; respondit, illum respicere ad morbum

TRANSLATION.

frequent sound heard within, from the motion of air; sometimes the body is unequal, tumours arising variously over the whole: sometimes water is accumulated within the abdomen, and by perension of the body, it is moved in such a manner, that its fluctuation may be detected. The Greeks have named the first Tympanites; the second, Leucophlegmatia, or Hyposarea; the third, Ascites. Now an excess of moisture is common to them all, and on this account ulcers do not heal easily on such persons.

This disease often begins spontaneously; very often succeeds to another chronic disease, and especially quartan fever. Slaves are more easily liberated from it than free men: because it requires abstinence, thirst, long patience, and a thousand other inconveniences, consequently they are more readily relieved than those to whom liberty proves an impediment. But even those who are under the control of others, unless they can moderate their desires entirely, are not cured. For this very reason, a physician of some celebrity, a disciple of Chrysippus, residing with King Antigonus, maintained that a certain friend of that prince, noted for his intemperance, and but moderately affected with this disease, could not be cured. When another physician, Philip of Epirus, undertook to cure him, the other answered,

ad morbum ægri respicere ; se, ad animum. Neque eum res fecellit. Ille enim cum summa diligentia non medici tantummodo, sed etiam regis custodiretur, tamen malagmata sua devorando, bibendoque suam urinam, in exitium sese præcipitavit.

Inter initia tamen, non difficillima curatio est, si imperata sunt corpori quies, sitis, inedia : at si malum inveteravit, non nisi magna mole disceutitur. Metrodorum tamen, Epicuri discipulum, ferunt, cum hoc morbo tentaretur, neque æquo animo necessariam sitim sustineret, ubi diu abstinuerat, bibere solitum, deinde evomere. Quod si redditur, quidquid receptum est, multum tædio decedit ; si a stomacho retentum est, morbum auget : ideoque in quolibet tentandum non est.

Sed si febris quoque est, hæc in primis submovenda est per eas rationes, per quas huic succurri posse propositum est : si sine febre æger est, tum demum ad ea veniendum est, quæ ipsi morbo mederi solent. Atque hic quoque quaecumque species est, si nondum nimis occupavit, iisdem auxiliis opus est: multum ambulandum, currendum, aliquid est; superiores maxime

ægri ; se, ad animum. Neque res fecellit eum. Enim enim ille custodiretur summa diligentia non tantummodo medici, sed etiam regis, tamen devorando sua malagmata, que hibendo suam urinam, præcipitavit sese in exitium.

Tamen inter initia, curatio non est difficillima, si quies, sitis, inedia sunt imperata corpori : at si malum inveteravit, non nisi discutitur magna mole. Tamen ferunt Metrodorum, discipulum Epicuri, cum tentaretur hoc morbo, neque sustineret necessariam sitim æquo animo, ubi abstinnerat diu, (esse) solitum bibere, deinde evomere. Quod si quidquid est receptum, redditur, denit multum tædio ; si est retentum a stomacho, auget morbum : que ideo non est tentandum in quolibet.

Sed si est quoque febris, hæc est submovenda in primis per eas rationes, per quas est propositi posse succurri huic : si æger est sine febre, tum demum est veniendum ad ea, quæ soleant mederi morbo ipsi. Atque hic quoque quæcumque species est, si nondum oecupavit nimis, est opus iisdem auxiliis : est ambulandum multum, currendum aliquid ; superiores partes sic per-

TRANSLATION.

" You seem to regard his disease only ; I know his mind." Nor was he deceived. For although he was guarded with the greatest diligence not only of the physician, but also by the king himself, yet by devouring his own poultices and drinking his urine, he precipitated his own destruction.

Yet in the beginning, the cure is not very difficult, if rest, thirst, and abstinence be strictly enjoined on the patient; but when the disease becomes chronic, it is disengaged with much difficulty. Yet they relate, that Metrodorus, a disciple of Epicurus, when he was afflicted with this disease, and could not sustain the necessary thirst with equanimity, when he had abstained a long time, used to drink, and afterwards reject it again. Now if whatever has been taken, be discharged again, it mitigates the malady much; if retained by the stomach, it augments the disease: and on that account ought not to be tried in every case.

But if there be fever also, this must be removed first of all by those means previously prescribed for its relief; if the patient have not fever, then we must appropriate those things that are calculated to cure the disease itself: and here too, whatever be the species, the same remedies will avail, if the disease have not made much progress in the system: he must walk much, run a little; and the superior

partes sic perfricandæ, ut spiritum ipse contineat ; evocandus est sudor, non per exercitationem tantum, sed etiam in arena calida, vel laconico, vel elibano, similibusque aliis; maximeque utiles naturales, et siccæ sudationes sunt, quales super Baiae in myrtetis habemus. Balneum, atque omnis humor alienus est. Jejuno recte catapotia dantur, facto ex absinthii duabus, myrræ tertia parte.

Cibus esse debet ex media quidem materia, sed tamen generis durioris: potio non ultra danda est, quam ut vitam sustineat; optimaque est, quæ urinam movet. Sed id ipsum tamen moliri cibo, quam medicamento melius est. Si tamen res coget, ex iis aliquid, quæ id præstant, erit decoquendum, eaque aqua potui danda. Videntur autem hanc facultatem habere iris, nardum, crocum, cinnamum, amomum, casia, myrrha, balsamum, galbanum, ladanum, oenanthe, panaces, cardamomum, hebenus, cypri semen, uva taminia σταφίδα ἄγριαν Græci nominant, abrotonum, rose folia, acorum, amaræ nuces, tragoriganum, styrax, costus, junci quadrati et rotundi semen; illum κύπειρον, hunc σχοῖνον Græci vocant:

ORDO.

fricandæ, maxime ut ipse contineat spiritum; sudor est evocandus, nou tantum per exercitationem, sed etiam in calida arena, vel laconico, vel elibano, que aliis similibus; que naturales et siccæ sudationes, quales habemus super Baiae in myrtetis sunt maxime utiles. Balnem, atque omnis humor est alienus. Catapotia dantur recte jejuno, facta ex duabus (partibus) absinthii, tercia parte myrræ.

Cibus quidem debet esse ex media materia, sed tamen durioris generis: potio non est danda ultra, quam ut sustineat vitam; que (ea) est optima, quæ movet urinam. Sed tamen est melius moliri id ipsum eibo, quam medicamente. Si tamen res coget, aliquid ex iis, quæ præstant id, erit decoquendum, que ea danda potui aqua. Anteiris, nardum, crocum, cinnamum, amomum, casia, myrrha, balsamum, galbanum, ladanum, oenanthe, panaces, cardamomum, hebenus, semen empressi, taminia uva, Græci nouinant σταφίδα ἄγριαν (staphida agrian), abrotonum, folia rosæ, acorum, amaræ nuces, tragoriganum, styrax, costus, semen rotundi et quadrati juncii, Græci vocant illum σχοῖνον (schoinoi), hunc κύπειρον (kupeiron) videntur habere haue facul-

TRANSLATION.

parts particularly to be rubbed: that the patient himself in the mean time should retain his breath: perspiration is not only to be elicited by exercise, but in hot sand, or in the laconicum, or elibatum, and by other similar means; the natural and dry sweating places, such as we have in the myrtle groves above Baiae, are particularly useful. The bath and all fluids are improper. Catapotia(8) composed of two parts of wormwood and one third of myrrh, may be given with propriety to the patient on an empty stomach.

Indeed the food ought to be of the middle class, but yet of the harder kind; no more drink should be given than what may support life; and that is the best which promotes urine. But yet it is better to effect that, by food rather than by medicine. However, if the case require it, some of those things which possess that property should be boiled, and given for drink. This diuretic principle seems to exist in iris, spikenard, saffron, cinnamon, amomum, casia, myrrh, balsam, galbanum, ladanum, wild grape, panaceas, cardamum, ebony, cypress seed, Taminian grape, which the Greeks term staphis agria, southernwood, rose leaves, acornm, bitter almouds, wild marjoram, styrax, costum, the seed of the square and round rush, the Greeks call that cupeiron (*cyperus*), this schœnus(9); which as often as I have

quæ quoties posuero, non quæ hie nascentur, sed, quæ inter aromata afferuntur, significabo. Primo tamen, quæ levissima ex his sunt, id est rosæ folia, vel nardi spica, tentanda sunt. Vinum quoque utile est austерum, sed quam tenuissimum. Commodum est etiam, lino quotidie ventrem metiri, et, qua comprehendit alvum, notam imponere; posteroque die videre, plenius corpus sit, an extenuetur: id enim, quod extenuatur, medicinam sentit. Neque alienum est, metiri et potionem ejus, et urinam: nam si plus humoris excrenatur, quam assumitur, ita demum secundæ valetudinis spes est. Asclepiades in eo, qui ex quartana in hydrope deciderat, se abstinentia bidui, et fricatione usum; tertio die, jam et febre et aqua liberato, eibum et vinum dedisse, memoriae prodidit.

Haetenus communiter de omni specie præcipi potest: si vehementius malum est, diducenda ratio eurandi est. Ergo si inflatio, et ex ea dolor creber est, utilis quotidianus, aut altero quoque die post eibum, vomitus est: fomentis siecis calidisque utendum est. Si per hæc dolor non finitur, necessariæ sunt sine ferro eueurbitulæ: si ne per has

tatem: quæ quoties posuero, non significabo hie quæ nascentur, sed quæ afferuntur inter aromata. Tamen primo, quæ sunt levissima ex his, id est folia rosæ, vel spica nardi, sunt tentanda. Quoque austерum vinum est utile, sed quam tenuissimum. Quoque est commodum, metiri ventrem lino quotidie, et impone notam, qua comprehendit alvum; que postero die videre, an corpus sit plenius, (an) extenuetur, sentit medicinam. Neque est alienum, metiri et potionem, et urinam ejus; nam si plus humoris excrenatur, quam assumitur, ita demum est spes secundæ valetudinis. Asclepiades prodidit memoriae se usum esse abstinentia bidui, et frictione in eo qui deciderat ex quartana in hydrope; tertio die, et febre et aqua jam liberato, dedisse eibum et vi-

nūm.

Haetenus potest præcipi communiter de omni specie: si malum est vehementius, ratio eurandi est diducenda. Ergo si est inflatio, et creber dolor ex ea, quotidianus vomitus est utilis, aut quoque altero die, post eibum: est utendum siecis que calidis fomentis. Si dolor non finitur per hæc, eueurbitulæ sine ferro sunt necessariæ: si nequi-

TRANSLATION.

mentioned, I do not designate such as grow here, but those which are imported among the aromatics. But the mildest of these must be tried first, that is, the rose leaves or spikenard. Also austere wine is useful; but much diluted. It is also interesting to measure the abdomen daily with a thread, and to mark the extent of its circumference; and on the following day to observe whether the body be fuller, or extenuated: for that which is diminished yields to the treatment. Neither is it a bad practice to measure both his drink and urine: for if more fluid be excreted than is taken, then there is a favourable prospect of his recovery. Asclepiades himself has recorded that he prescribed abstinence for two days, and friction, to a patient who had become dropsical subsequent to a quartan ague: on the third day finding him liberated from both the fever and the water, he allowed him food and wine.

Thus far it may be applicable generally to every species of the disease: but if it be far advanced, then we must decide our mode of treatment. Therefore if there be inflation accompanied with frequent pain, a vomit daily, or at least every alternate day after food, will be found useful: dry, and hot fomentations must be applied at the same time. If the pain be not removed by these means, the cupping-

quidem tormentum tollitur, incidenda cutis est, et tum his utendum. Ultimum auxilium est, si cucurbitulæ nihil profuerunt, per alvum infundere copiosam aquam calidam, camque recipere. Quin etiam quotidie ter quaterve opus est uti frictione vehementi, cum oleo et quibusdam calefacentibus : sed in hae frictione a ventre abstinentum est. Imponendum vero in eum erebrius sinapi, donec eutem erodat : ferramentisque caudentibus pluribus locis venter exulcerandus est, et servanda ulcera diutius. Utiliter etiam scilla cocta delingitur. Sed diu post has inflationes abstinentum est ab omnibus inflantibus.

At si id vitium est, cui *λευκοφλεγματία* nomen est, eas partes, quæ tument, subjicere soli oportet ; sed non nimium, ne febriculam incendat : si is vehementior est, caput velandum est : utendumque frictione, madefactis tantum manibus aqua, cui sal et nitrum et olei paulum sit adjectum ; sic, ut aut pueriles aut muliebres manus adhibeantur, quo mollior earum tactus sit : idque si vires patiuntur, ante meridiem, tota hora, post meridiem, semihora fieri oportet.

ORDO.
dem tormentum tollitur per has, entis est incideuda, et tum utendum his. Ultimum auxilium est, si cucurbitulæ profuerunt nihil, infundere copiosam calidam aquam per alvum, que recipere eam. Quin etiam est opus uti vehementi frictione ter ve quater quotidie, cum oleo et quibusdam calefacentibus : sed in hae frictione est abstinentum a ventre. Vero siuapi (est) imponendum in eum crebrius, donec erodat entem : que venter est exulcerandus pluribus locis caudentibus ferramentis, et ulcera servanda diutius. Etiam cocta scilla delingitur utiliter. Sed diu post has inflationes, est abstinentum ab omnibus inflantibus.

At si est id vitium, cui est nomen *λευκοφλεγματία* (leucophlegmatia) oportet subjicere eas partes, quæ tunent, soli ; sed non nimium, ne incendat febriculam : si is est vehementior, caput est velandum : que utendum frictione, manibus madefactis tantum aqua, cui sal et nitrum, et paulum olei sit adiectum ; sic ut aut pueriles aut muliebres manus adhibeantur, quo tactus earum sit mollior : que oportet fieri id, si vires patiuntur, tota hora ante meridiem, semihora

TRANSLATION.

glasses, without the scarificator are necessary: if the torment cease not even then by these means, the cutis must be incised, and then the cups applied again. If the cupping instruments have availed nothing, our ultimate remedy is to inject plenty of warm water into the bowels, and to permit it to pass off again. But it is also necessary to apply forcible friction three or four times a day with oil and some of the calefacients: but in this disease, friction must not be applied over the abdomen. Mustard must be laid on it frequently until it corrode the skin; and the abdomen is to be ulcerated in several places with hot irons, and these to be kept open for some time. Also boiled squills may be advantageously taken in the form of an electuary. It will be requisite to abstain from all flatulent food for some time after the disease has subsided.

But if the disease be what is called leucophlegmatia, we should submit those parts which are tumefied to the sun, but not too much, lest that may excite a slight fever: if the sun be very violent, the head must be covered, and friction applied, the hands being only moistened with water, to which salt, nitre, and a little oil have been added; and for that purpose the hands of children or females may be applied, inasmuch as theirs is the softer touch: and if the strength permit that, it may be continued for a whole hour, before mid-day; and half an hour in the alter-

tet. Utilia etiam sunt cataplasmata, quae reprimunt; maximeque si corpora teneriora sunt. Incidendum quoque est super talum, quatuor fere digitis, ex parte interiore, qua per aliquot dies frequens humor feratur; atque ipsos tumores incidere altis plagis oportet: conuenienter multa gestatione corpus est: atque, ubi inductæ vulneribus cicatrices sunt, addieendum et exercitationibus est et eibis, donec corpus ad pristinum habitum revertatur. Cibus valens esse debet, et glutinosus, maximeque caro: vinum, si propter stomachum licet, dulcior; sed ita, ut invicem biduo triduo, modo aqua, modo id bibatur. Prodest etiam lactuæ marinæ, quæ grandis juxta mare naseitur, semen, eum aqua potui datum. Si valens est, qui id accipit, et seilla eoeta, sicut supra dixi, delingitur. Auctoresque multi sunt, inflatis vesicis pulsandos tumores esse.

Si vero id morbi genus est, quo in uterum multa aqua contrahitur, ambulare, sed magis modice oportet; malagma, quod digerat, impositum habere; idque ipsum superimposito triplie panno, fascia, non nimium tamen vehe-

ORDO.

post meridiem. Etiam cataplasmata quae reprimunt sunt utilia; que maxime si corpora sunt teneriora. Quoque est incidendum super talum, fere quatuor digitis ex interiore parte, qua frequens humor feratur per aliquot dies; atque oportet incidere tumores ipsos altis plagiis: que corpus est conuenienter multa gestatione: atque, ubi cicatrices sunt inductæ vulneribus, (est) addieendum et exercitationibus et eibis, donec corpus revertatur ad pristinum habitum. Cibus debet esse valens, et glutinosus, que maxime caro: vinum (esse) dulcior, si licet per stomachum; sed ita, ut invicem modo aqua, modo id bibatur biduo vel triduo. Etiam semen marinæ lactuæ, quæ nascitur grandis juxta mare, prodest datum eum aqua potui. Si est valens qui accipit id, et delingitur eoeta scilla, ut dixi supra. Que sunt multi auctores, tumores esse pulsandos inflatis vesicis.

Vero si est id genus morbi, quo aqua contrahitur in uterum, oportet ambulare, sed magis modice; habere malagma, quod impositum, digerat; que triplici panno superimposito, fascia, tamen non nimium vehementer; adstringere id ipsum; quod pro-

TRANSLATION.

noon. Restrictive cataplasms also are useful, and especially in delicate constitutions. An incision must be made on the inside of the leg, about four fingers breadth above the ankle, from which abundant moisture may be discharged for some days: it is also proper to make deep incisions in the tumours themselves: and the body must be shaken by much gestation: and when the wounds have acquired cicatrices, the food and exercises must be augmented, until the body return to its former habit. The food ought to be strong and glutinous, and chiefly flesh: his wine should be rather sweet, if tolerated by the stomach: but in this manner, that alternately for two or three days he may drink water, and then wine. The seed of the marine lettuce (spurge) which grows large near the sea, may be advantageously given with water for drink. If the patient be vigorous who receives it, also boiled squills may be administered as an electuary, as I have said above. There are many authors, who direct the tumours to be beaten with inflated bladders.

But if the disease be of that kind in which water is collected in the abdomen, (*ascites*), it behoves the patient to walk, but more moderately; to have a dissentient poultice laid on; and to bind a triple cloth over it with a roller, but not too tight;

menter, adstringere: quod a Tharria profectum, servatum esse a pluribus video. Si jeeur, aut splenem affectum esse, manifestum est, sicum pinguem contusam, adjecto melle, superponere. Se per talia auxilia venter non siccatur, sed humor nihilominus abundat, ele-

TRANSLATION.

which having been introduced by Tharrias, I see is still observed by many. If there be any evident affection of the liver or spleen, a mellow fig bruised with honey to be laid over it. If the abdomen be not emptied by these means, and the fluid still abound, we must employ a more summary process, that it may be discharged by the abdomen itself. I am aware that this mode of treatment did not receive the approbation of Erasistratus; for he considered this to be a disease of the liver: therefore this viscous being enred, the water will be discharged to no purpose, the same organ being diseased, the water will be reproduced from time to time. But, in the first place, this is not a disease of the liver alone; for it arises both in affections of the spleen, and in a cachetic habit of the whole body. In the next place, although it might have begun thence, yet unless the water be dis-
charged which exists there contrary to nature, it injures both the liver and the other interior parts: and it is admitted even in that case, that the body should be treated generally. For the discharge of the fluid does not cure the disease, but it affords an opportunity for medical treatment, which that impedes while inclosed within. Neither does this admit of contradiction, that all persons in this disease cannot be treated in this way; but robust youth who are entirely free from fever, or at least have ample intermissions. For those whose stomachs are vitiated, or

maelius corruptus est, quive ex atra
bile huc decidcrunt, quive malum cor-
poris habitum habent, idonci huic cu-

TRANSLATION.

who have fallen into dropsy from atrabilis, or a cachectie habit of body, are not proper subjects for this mode of treatment.

Now food is improper on the first day that the fluid is discharged, unless the strength be deficient: on the following days, both food and indeed very pure wine ought to be given, but in moderation, and the patient must be gradually accustomed to exercises, frictions, the solar heat, perspiration, fatigue, and appropriate food, until he become entirely well. This disease seldom requires a bath, but more frequently vomiting on an empty stomach. Sea-bathing is advantageous in summer. But even after a person has become convalescent, the pleasure of venery is improper for him.

CHAP. XXII.

OF CONSUMPTION AND ITS SPECIES.

CONSUMPTION is often a lingering and a dangerous disease to those whom it at-
tacks; and there are several species of this also. One is, in which the body is un-

est, qua corpus non alitur, et natura-
liter semper aliquibus decedentibus,
nullis vero in corum locum subeuntibus,
summa macies oritur; et, nisi occur-
ritur, tollit. Ἀτροφίαν hanc Græci vo-
cant. Ea duabus fere de causis inci-
dere consuevit. Aut enim nimio ti-
more aliquis minus, aut aviditate nimia
plus, quam debet, assumit: ita vel,
quod deest, infirmat, vel, quod superat,
corrumpitur.

Altera species est, quam Græci
υαχεξίαν appellant: ubi malus corporis
habitus est; ideoque omnia alimenta
corrumpuntur. Quod ferc fit, cum
longo morbo vitiata corpora, etiamsi
illo vacant, refectionem tamen non ac-
cipiunt; aut cum malis medicamentis
corpus affectum est; aut cum diu ne-
cessaria defuerunt; aut cum inusitatos
et inutiles cibos aliquis assumpsit, ali-
quidve simile incidit. Huic, praeter
tabem, illud quoque nonnumquam acci-
dere solet, ut per assiduas pustulas, aut
ulcera, summa cutis exasperetur, vel
aliquæ corporis partes intumescant.

Tertia est, longeque periculosissima
species, quam Græci φθίσιν nominarunt.
Oritur fere a capite; inde in

pus non alitur, et aliquibus sem-
per decedentibus naturaliter,
vero nullis subeuntibus in lo-
cum eorum, summa macies ori-
tur, et, nisi occurritur, tollit.
Græci voeant hanc Ἀτροφίαν,
(atrophia). Ea eonsuevit inci-
dere fere de duabus causis.
Enim aliquis aut assumit minus
quam debet, nimio timore, aut
plus nimia aviditate: ita, vel,
quod deest, infirmat; vel quod superat,
corrumpitur.

Est altera species, quam Græci
appellant *υαχεξίαν* (cachexia);
ubi est malus habitus corporis;
que ideo omnia alimenta corrumpuntur.
Quod fit fere, cum cor-
pora vitiata longo morbo, etiamsi
vacant illo, tamen non accepint
refectionem; aut cum corpus
est affectum malis medicamentis;
aut eum necessaria defuerunt
diu; aut eum aliquis assumpsit
inusitatos et inutiles cibos, ve
aliquid simile inedit. Praeter
tabem, illud solet accidere non
nunquam huic, ut summa entis
exasperetur per assiduas pustu-
las, aut ulcera, vel aliquæ partes
corporis intumescant.

Tertia, que longe periculosissi-
ma species est, quam Græci
nominarunt φθίσιν (phthisis). Ori-
tur fere a capite; inde destillat

TRANSLATION.

nourished, and as some portions are constantly departing naturally, and nothing being supplied in their place to support the constitutional decay, extreme emaciation takes place; and unless opposed, speedily carries off its victim. The Greeks call this atrophy. It generally results from one or other of two causes. For a person through excessive fear takes less, another from too great avidity takes more than he ought to do; therefore, either the deficiency debilitates; or the superfluity is corrupted.

There is another kind which the Greeks call cachexia, where there is a depraved habit of body; and on that account all the aliments are corrupted. This generally happens, when the body becomes vitiated by a protracted disease, even if liberated from it, yet receives no nutrition; or when the body has been affected by maltreatment; or when the necessities of life have been deficient a long time; or when unusual or pernicious food has been taken, or from some similar cause. In this last case, besides consumption, it is not unusual for the surface of the skin to be exasperated by continual pustules, or ulcers, or some parts of the body become tumefied.

The third, and by far the most dangerous species of it is, that which the Greeks have named phthisis. It arises for the most part from the head; thence it drops

pulmonem destillat; huic exulceratio accedit; ex hac febricula levis fit, quæctiam, cum quievit, tamen repetit; frequens tussis est; pus exscreatur; interdum cruentum aliquid. Quidquid exscrecatum est, si in ignem impositum est, mali odoris est: itaque, qui de morbo dubitant, hæc nota utuntur.

Cum hæc genera tabis sint, animadvertere primum oportet, quid sit, quo laboretur. Deinde, si tantummodo non ali corporis apparet, eausam ejus attendere; et si cibi minus aliquis, quam debet, assumpsit, adjicere, sed paulatim; ne si corpus insuetum subita multitudine oneraverit, concoctionem impeditat. Si vero plus justo quis assumere solitus est, abstineret uno die; deinde ab exiguo cibo incepere; quotidie adjicere, donec ad justum modum perveniat. Praeter hæc convenit ambulare locis quam minime frigidis, sole vitato; per manus quoque exerceri: si infirmior est, gestari, ungi, perfricari, si potest, maxime per scipsum, saepius eodem die, et ante cibum, et post eum, sic, ut interdum oleo quædam adjiciantur calefacentia, donec insudet.

ORDO.

in pulmonem; ulceratio accedit huic; ex hac levis febricula fit, quæ etiam, cum quievit, repetit; tussis est frequens; pus exscreatur; aliquid cruentum interdum. Quidquid est exscrecatum, si est impositum in ignem, est mali odoris: itaque, qui dubitant de morbo, utuntur hæc nota.

Cum hæc sint genera tabis, oportet animadvertere primum, quid sit, in quo laboretur. Deinde, si corpus tantummodo apparet non ali, attendere causam ejus; et si aliquis assumpsit minus eibi, quam debet, adjicere, sed paulatim; ne si oneravit insuetum corpus subita multitudine, impeditat concoctionem. Si vero quis est solitus assumere plus justo, (debet) abstinere uno die; deinde incipere ab exiguo cibo; adjicere quotidie, donec perveniat ad justum modum. Praeter hæc, convenit ambulare quam minime (in) frigidis locis, sole vitato; quoque exerceri per manus: si est infirmior (debet) gestari, ungi, perfricari, si potest, maxime per seipsum, saepius eodem die, et ante cibum, et post eum, sic ut interdum quædam calefacentia adjiciantur oleo, donee insudet.

TRANSLATION.

down into the lungs; ulceration accedes to this; from this a slight fever supervenes, which although it subsides, yet returns again; there is frequent cough; pus is expectorated, sometimes mixed with blood. The matter expectorated, if thrown on the fire emits a disagreeable odour. Therefore those who have any doubt concerning the disease, employ this experiment.

As these are the several species of consumption, it will be necessary to discriminate first, under what species the patient is suffering. Then if it appear that the body receives no nourishment from food, the cause must be attended to; and if the patient have taken less food than he ought, he should augment it gradually; lest he suddenly over charge the unaccustomed stomach, and impede digestion. But if any person be in the habit of taking more food than what was sufficient, he should fast for one day; afterwards, to begin with a little food, and that to be augmented every day until he arrive at the full quantity. Besides these means, he ought to walk in such places as are least exposed to cold, avoiding the solar heat; also to be exercised by manual labour; if he be very infirm, to be carried, anointed, and rubbed if possible with his own hands frequently, during the same day, both before and after food, occasionally adding some of the caleficients to the oil until he perspire.

Prodestque jejuno prehendere per multas partes eutem, et attrahere, ut relaxetur; aut, imposta resina et abdueta, subinde idem facere. Utile est etiam interdum balneum, sed post cibum exiguum. Atque in ipso solio recte eibi aliquid assumitur; aut, si sine hoc frietio fuit, post eam protinus. Cibi vero esse debent ex iis, qui facile coneoquuntur, qui maxime alunt. Ergo viui quoque, sed austeri, necessarius usus est. Movenda urina.

At si malus corporis habitus est, primum abstinentia est; deinde alvus dueenda; tum paulatim cibi daudi, adjectis exercitationibus, unctionibus, frictionibus. Utilius his frequens balneum est, sed jejunis; etiam usque sudorem. Cibis vero opus est copiosis, variis, boni succi, quique etiam minus facile eorumpantur, vino austero. Si nihil reliqua proficiunt, sanguis mittendus est; sed paulatim, quotidieque pluribus diebus, cum eo, ut cetera quoque eodem modo serventur.

Quod si mali plus est, et vera phthisis est, inter initia protinus ocurrere necessarium est: neque enim facile is morbus, cum inveteraverit, evineatur. Opus est, si vires patiuntur, longa na-

ORDO.

Que prolest prehendere en tem per multis partes jejuno, et attrahere, ut relaxetur; aut, resina imposta et abdueta, facere idem subinde. Balneum interdum etiam est utile, sed post exiguum cibum. Atque aliquid eibi assumitur recte in solio ipso; aut, si fuit frietio sine hoc, protinus post eam. Vero eibi debent esse ex iis, qui coneoquuntur facile, (et) qui alunt maxime. Ergo usus vini est quoque necessarius, sed austeri. Urina movenda.

At si est malus habitus corporis, est primum abstinentia; deinde alvus dueenda; tum cibi dandi paulatim, exercitationibus, unctionibus, frictionibus adiectis. Sed, frequens balneum est utilius his jejunis; etiam usque sudorem. Vero est opus copiosis, variis cibis, boni succi, que qui etiam eorumpantur nimis facile, austero vino. Si reliqua proficiunt nihil, sanguis est mittendus; sed paulatim, que plurimis diebus, quotidie cum eo, ut cetera quoque serventur eodem modo.

Quod si est plus mali, et est vera phthisis, est necessarium ocurrere (ea) protinus inter initia: enim neque is morbus eviucitur facile, cum inveteraverit. Est opus, si vires patiuntur,

TRANSLATION.

It is advantageous also to seize the skin in various places, and to extend it, that it may be relaxed; or to effect the same by frequently affixing a piece of resin on the skin and withdrawing it. Sometimes the bath is useful after a spare meal: and sometimes food may be taken with propriety even in the solium itself, or immediately after friction, if the bath have not been used. Now the food ought to be that which is easily digested, and most nutritive. Therefore the use of anstere wine is also necessary: the urine must be promoted.

But if there be a depraved habit of body, abstinence must be observed: then an enema exhibited; afterwards food should be given gradually, adding exercise, unction, and friction. Frequent bathing is very useful to those patients, when fasting, even until they perspire. The food must be abundant, varied, and of a good juice, such as may not easily become putrid, and austere wine. If other remedies avail nothing, blood must be let; but gradually, and daily for some time, with this proviso, that the other means be also observed in the same manner.

But if the disease be more severe, and a true phthisis established, it is necessary to oppose it from the very commencement: for that disease is not easily overcome, when it becomes inveterate. If the strength permit, there is a necessity of long

vigatione, eōli mutatione, sic ut densius quam id est, ex quo discedit aēger, petatur: ideoque aptissime Alexandriam ex Italia itur. Fereque id posse inter principia corporis pati debet, eum hie morbus aetate firmissima maxime oriatur, id est ab anno duodevieesimo ad annum quintum et tricesimum. Si id imbecillitas non sinit, nave tamen non longe gestari eomodissimum est: si navigationem aliqua res prohibet, leetitia, vel alio modo corpus movendum est.

Tum a negotiis abstinendum est, omnibusque rebus, quae sollicitare animum possunt; somno indulgendum; eavendae destillationes, ne, si quid cura levarit, exasperent; et ob id vitanda eruditas, simulque et sol, et frigus; os obtegendum, fauees velandae, tussicula suis remediis finienda: et, quamdiu quidem febricula ineursat, huic interdum abstinentia, interdum etiam tempestivis eibis medendum; eoque tempore bibenda aqua. voyages, with change of climate, so that he may search for a more dense atmosphere, than the one he departs from; and for this reason invalids migrate from Italy to Alexandria advantageously. The body ought to be able to support this in the commencement of the disease, as it generally arises at the most vigorous period of life, that is, from the eighteenth to the thirty-fifth year. If the constitutional debility cannot support that, short trips on board of a ship will be most advantageous: if there be any objection to sailing, the body must be moved from place to place in a palanquin, or in some other manner.

At that time all business and mental solicitude must give place to tranquillity of mind; he must indulge in sleep; catarrhs must be guarded against, lest they exasperate that, which care and treatment may have mitigated; and for that reason indigestion must be avoided, and at the same time both the heat of the sun and cold; the face is to be covered, the throat wrapped up, and the tickling cough to be removed by appropriate remedies: and indeed as long as the fever continues to attack, it must be treated sometimes by abstinence, sometimes by seasonable food; and at that time water is to be drunk. Milk also, which is as bad as poison in pains of the head, and in acute fevers, and in excessive thirst occasioned by these, if the praecordia be swollen, or the urine bilious, or haemorrhage; yet it

plithisi tamen, sicut in omnibus longis difficultibusque febriculis, recte dari potest.

Quod si febris aut nondum incursat, aut jam remisit, decurrentum est ad modicas exercitationes, maximeque ambulationes; item lenes frictiones. Balneum alienum est. Cibus esse debet primo acer, ut allium, porrum, idque ipsum ex aceto, vel ex eodem intubus, ocimum, lactuca: deinde lenis, ut sorbitio ex ptisana, vel ex alica, vel ex amylo, laete adjecto. Idem oryza quoque, et, si nihil aliud est, far præstat. Tum invicem modo his cibis, modo illis utendum est; adjiciendaque quædam ex media materia, præcipue vel ex prima cerebellum, vel pisciculus, et his similia. Farina etiam cum sevo ovillo caprinove mista, deinda incocta, pro medicamento est. Vinum assumi debet leve, austcrum.

Hactenus non magna mole pugnatur: si vehementior noxa est, ac neque febricula, neque tussis quiescit, tenuarique corpus appetit, validioribus auxiliis opus est. Exulcerandum est ferro candenti, uno loco sub mento, altero in gutture, duobus ad mammam utramque; item sub imis ossibus scapularum, quas

TRANSLATION.

may be given beneficially in plithisis, as well as in all chronic and obstinate fevers.

But if the fever have not commenced, or have already remitted, we must have recourse to moderate exercises, especially walking, and also gentle friction. A bath is improper. The food ought to be acrid at first, such as garlic, leek, and that itself with vinegar, or endive with the same, basil, lettuce; afterwards the food should be mild, such as gruel made of ptisan, or alica, or of starch with the addition of milk. Rice also, and if there be nothing else, far answers the same purpose. Then these may be used alternately; adding something of the middle class, especially the brains of those animals in the first class, or small fish, and the like. Flour also mixed with mutton or goat suet and then boiled, is medicinal. Light austere wine ought to be taken.

Thus far the disease is combated without much difficulty: but if the malady be more vehement, accompanied with fever and cough, and the body appear emaciated, there is a necessity for more powerful remedies. Ulcerations are to be effected with a burning iron in one place under the chin, another on the throat, two on each breast; also under the lower margin of the scapulae, which the Greeks

ἀμοπλάτας Græci voeant, sic, ne saneseere uleera sinamus, nisi tussi finita: eui per se quoque medendum esse, manifestum est. Tunc ter quaterve die vehementer extremæ partes perfriandæ, thorax levi manu pertractandum, post eibum intermittenda hora, et perfrianda erura, brachiaque: interpositis deem diebus, demittendus est æger in solium, in quo sit aqua calida et oleum: eeteris diebus bibenda aqua; tum vinum, si tussis non est, potui frigidum dandum; si est, egelidum. Utile est etiam in remissionibus quotidie cibos dari: frictiones gestationesque similiter adhiberi: eadem aeria quarto, aut quinto die sumere: interdum herbam sanguinalem ex aeeto, vel plantaginem esse. Medicamentum est etiam vel plantaginis suœus per se, vel marrubii eum melle in eoctus; ita ut illius eyathus sorbeatur, hujus coehleare plenum paulatim delingatur; vel inter se mista, et incoeta resinæ terebinthinæ pars dimidia, butyri et mellis pars altera. Præcipua tamen ex his omnibus sunt victus, vehieulum, et navis, et sorbitio. Alvus cita utique vitanda est. Vomitus in hoc morbo frequens, pernicious est, maximeque sanguinis. Qui melior esse cœpit, adjicere debet exer-

call omoplatae, which ulcers must not be permitted to heal, unless the cough have ceased, which manifestly requires a mode of treatment peculiar to itself. Then the extremities are to be rubbed violently three or four times a day, the chest is to be rubbed with a light hand; an hour after food, the legs and arms are to be rubbed: ten days having intervened, the patient is to be put into the solium, prepared with warm water and oil; on the other days water is to be drunk, and if there be no cough, cold wine may be given him to drink, if there be cough, tepid. It is also proper to give food daily in the remissions; to apply friction and gestation in the same manner; to take the above-mentioned acrid things every fourth day: sometimes to eat the herb blood-wort or plantain with vinegar. The juice of plantain either by itself or of horehound boiled up with honey is medicinal; so that a glassful of the first may be sipped, and a table spoonful of the latter may be taken gradually as an electuary; or one half part turpentine resin, another of butter and honey mixed and boiled together. But the principal of all these are diet, carriage exercise, sailing, and gnel. A diarrhoea is particularly to be avoided. Frequent vomiting in this disease is dangerous, and especially of blood. When a patient begins to grow a little better, he ought to increase his exercises,

CHAP. XXIII.

OF EPILEPSY.

AMONG the most noted diseases is that which is named comittal (10) or the greater. The man falls suddenly; and he foams at the mouth; after some time he returns to himself, and rises by his own efforts. This malady more frequently attacks men than women; and indeed it is usual for it to become rebellious, and continue for life, without endangering existence; yet sometimes it destroys the patient when it is recent: and very often the first sexual intercourse of boys, or the catamenia in girls removes the disease, unless previously cured by medicine. Sometimes a person falls down with convulsions of the limbs, sometimes without.

Some endeavour to arouse these patients by the same remedies which is applied

admodum supervacuum est; et quia ne lethargicus quidem his sanatur; et quia, cum possit ille numquam expergisci, atque ita fame interire, hic ad se utique revertitur.

Ubi concidit aliquis, si nulla nervorum distentio accessit, utique sanguis mitti debet: si aecessit, non utique mittendus est, nisi alia quoque hortantur. Necessarium autem est, ducere alvum, vel nigro veratro purgare, vel utrumque facere, si vires patiuntur: tunc caput tondere, oleoque et aceto perungere: cibum post diem tertium, simul transiit hora, qua concidit, dare. Neque sorbitiones autem his, aliisque molles, et faciles cibi, neque caro, minimeque suilla convenit; sed mediae materiae: nam et viribus opus est, et eruditates cavendae sunt. Cum quibus fugere oportet solem, balneum, ignem, omniaque calefacientia; item frigus, vinum, venerem, loci præcipitis conspectum, omniumque terrentium, vomitum, lassitudinem, solicitudines, negotia omnia. Ubi tertio die cibus datus est, intermittere quartum, et invicem alterum quemque, eadem hora eibi servata, donec quatuordecim dies transeant. Quos ubi morbus excessit,

ORDO.
nantur excitare) lethargicos: quod est admodum supervacuum; et quia nequidem lethargicus sanatur his; et quia, cum ille numquam possit expergisci, atque ita interire fame, utique hic revertitur ad se.

Ubi aliquis concidit, si nulla distentio nervorum accessit, utique sanguis debet mitti: si aecessit, utique non est mittendus, nisi alia quoque hortantur. Autem est necessarium, ducere alvum, vel purgare nigro veratro, vel facere utrumque, si vires patiuntur: tunc tondere caput, que perungere (eaput) oleo et aceto: dare cibum post tertium diem, simul hora transiit, qua concidit. Antem neque sorbitiones, que alii molles, et faciles eibi, neque caro, que minime suilla convenit his; sed mediae materiae: nam est et opus viribus, et eruditates suut cavendae. Cum oportet quibus fugere solem, balneum, ignem, que omnia calefacientia; item frigus, vinum, venerem, conspectum præcipitis loci, que omnium terrentium, vomitum, lassitudinem, solicitudines, omnia negotia. Ubi eibus est datus tertio die, intermittere quartum, et quemque alterum invicem, eadem hora cibi servata, donec quatuordecim dies transeant. Quos ubi morbus

TRANSLATION.

to lethargic persons, which is very wrong; because even a lethargic person is never cured by these things, and indeed it is possible he may never awake, and so perish of hunger, whereas the epileptic is sure to return to himself.

When a person falls down, if the fit be not accompanied with convulsions, he ought to lose blood immediately: but if on the contrary, then blood must not be taken, unless other circumstances urge it. But it will be necessary to administer an enema, or to purge with black hellebore, or to do both, if the strength permit: then to have the hair cut close, and anoint his head with oil and vinegar; to give food on the third day, as soon as that hour shall have passed, on which he fell. Now gruels, and all bland, soft food, flesh, and particularly that of pork, are all improper for such patients; but a middle diet: for there is a necessity to keep up the strength, and at the same time indigestion must be avoided. With these he must avoid the sun, the bath, fire, and all calefacients; also cold, wine, venery, the sight of a precipice, and every object of terror, vomiting, lassitude, solicitude, and negotiations of every kind. When food has been given on the third day, he should intermit on the fourth, and every other day alternately; observing the same hour for food, for the space of fourteen days. After which time, should the disease

acuti vim depositus: ac, si manet, curandus jam ut longus est. Si morbus non fuerit finitus per hæc, erit configiendum ad album veralrum; ac quoque utendum eo ter aut quater, non ita multis diebus interpositis; tamen sic, ne sumat umquam iterum, nisi conciderit. Autem vires ejus erunt nutriendæ mediis diebus; quibusdam adjectis, præter ea, quæ sunt scripta supra. Ubi est experrectus mane, corpus ejus permulceatur leniter ex vetere oleo, capite cum ventre excepto: tum utatur longa et recta ambulatione quam maxime: post ambulationem, perfricetur vehementer et dia tepido loco, ac non minus ducenties, nisi erit infirmus: deinde multa frigida aqua perfundatur per eaput; assumat

TRANSLATION.

be protracted, it loses the acute form, and if it remain, it must be treated as chronic. Now if a physician be not called on the very day on which it first happened, but a patient comes under his care who has been accustomed to these falling fits; in the first place that regimen which has been described above must be observed, and to wait in anticipation of another attack; and then he must employ either venesection, injection, or black hellebore, as already prescribed: afterwards, on the subsequent days he is to be nourished by those aliments which I have mentioned before, and to avoid all those things which I have interdicted.

If the disease should not terminate by these means, it will be necessary to employ white hellebore; and that must be used three or four times, interposing a few days between the doses; but this is never to be taken again, unless the disease shall return. On the intermediate days his strength must be supported, by adding something, besides those, which have been mentioned above. When he has awoken in the morning, his body may be rubbed over with old oil, (the head and abdomen excepted): then let him walk as long and as straight as possible: after walking he should be freely rubbed in a warm place for a considerable time, and the number of movements must not be less than two hundred, unless he be very weak: afterwards cold water should be freely poured over the head; he may take a little

cibi assumat; conquiescat: rursus ante noctem ambulatione utatur: iterum vehementer perfricetur, sic ut neque venter, neque caput contingatur: post haec eoenet; interpositisque tribus aut quatuor diebus, uno aut altero acria assumat.

Si ne per haec quidem fuerit liberatus, caput radat; ungatur oleo veterc, adjecto acetō et nitro; perfundatur aqua salsa; bibat jejunus ex aqua castorecum; nulla aqua, nisi decocta, potionis causa utatur. Quidam jugulati gladiatoriis calido sanguine epoto tali morbo se liberarunt: apud quos missrum auxilium tolerabile miscrius malum fecit. Quod ad medicum pertinet, ultimum est, juxta talum, ex utroque crure paulum sanguinis mittere; occipitum incidere, et eucurbitulas admovere; ferro candenti in occipitio quoque et infra, qua summa vertebra cum capite committitur, adurere duobus locis, ut per ea pernicious humor evadat. Quibus si finitum malum non fuerit, prope est, ut perpetuum sit. Ad levandum id, tantummodo utendum erit exercitatione multa, frictione, cibisque iis, qui supra comprehensi sunt: praecepueque vitanda omnia, quae ne fierent, exceperimus.

ORDO.

paulum eibi; conquiescat: utatur ambulatione rursus ante noctem: iterum perfricetur vehementer, sic ut neque venter, neque caput contingatur: post haec eoenet; que tribus aut quatuor diebus interpositis, assumat acria uno aut altero.

Si ne quidem fuerit liberatus per haec, radat caput; ungatur vetere oleo, acetō et nitro adjecto; salsa aqua perfundatur; jejunus bibat eastorem ex aqua; utatur nulla aqua causa potionis, nisi decocta. Quidam liberarunt se tali morbo, epoto calido sanguine jugulati gladiatoriis: apud quos, miserum auxilium feuit miseriis malum tolerabile. Quod pertinet ad medicum, est ultimum, mittere paulum sanguinis ex utroque crure juxta talum; incidere occipitum, et admoveare euenirbitulas; quoque adnovere duobus locis eandem ferro, in occipitio et infra, qua summa vertebra committitur cum capite, ut pernicious humor evadat per ea. Quibus si malum non faerit finitum, est prope, ut sit perpetuum. TRANSLATION.

food, and rest: he may walk again before night: the friction to be renewed vehemently, without touching the head or abdomen; these being done, he may sup; after three or four days, he may take aerid things, for a day or two.

If the patient be not freed even by these means, let his head be shaved: then anointed with old oil, adding vinegar and nitre; and salt water affused over it: when his stomach is empty, let him drink eastor and water: to drink no water, unless it has been boiled. Some have liberated themselves from such a disease, by drinking the warm blood of a slain gladiator; to whom a wretched remedy is rendered tolerable by a still more wretched disease. As far as it relates to the physician, the last auxiliary is to let a little blood from each leg, near the ancle; to make an incision in the occiput and apply the cupping instruments; also to burn in two places with a hot iron, in the occiput and below it, where the first vertebra is connected with the head, that the pernicious humor may escape by them. If the disease be not terminated by these means, it may be considered perpetual. To alleviate it, much exercise must only be used, with friction, and those foods above mentioned, and especially all those things are to be avoided, which we have denounced.

CAP. XXIV.

DE REGIO MORBO.

ÆQUE notus est morbus, quem interdum arquatum, interdum regium nominant. Quem Hippocrates ait, si post septimum diem febrietante ægro supervenit, tutum esse, mollibus tantummodo præcordiis substantibus: Diocles, ex toto, si post febrem oritur, etiam prodesse; si post hunc febris, occidere. Color autem eum morbum detegit, maxime oculorum, in quibus, quod album esse debet, fit luteum. Soletque accedere et sitis, et dolor capitis, et frequens singultus, et præcordiorum dextra parte durities, et, ubi corporis vehemens motus est, spiritus difficultas, membrorumque resolutio: atque, ubi diutius manet morbus, totum corpus cum pallore quodam inalbescit.

Primo die abstinere ægrum oportet; secundo ducere alvum: tum, si febris est, eam victus genere discutere; si non est, scammoniam potui dare, vel eum aqua betam albam contritam, vel eum aqua

CHAP. XXIV.

OF THE JAUNDICE.

THAT malady which they sometimes call the arched disease (11), sometimes the royal, is equally well known. Hippocrates pronounced it to be safe, if it supervene after the seventh day of a fever, provided the præcordia remain soft: Diocles maintained without reserve, that if it came on after a fever, it was even salutary; but if fever come on after, it is fatal. Now this disease is discovered by the colour of the skin, but more particularly in the eyes, in which, what ought to be white, becomes pale yellow. And it is generally attended by a thirst, head-ache, frequent hiccup, hardness of the præcordia on the right side, and when there is violent motion of the body, dyspnoea and paralysis ensue: and when the disease becomes chronic, the whole body appears blanched with a peculiar icteritious pallor.

On the first day the patient must abstain from food: on the second to administer an injection; then if there be fever, to dissipate that by a febrifuge regimen; if there be no fever, to give scammony as a drink, or white beet bruised with water,

mulsa nuces amaras, absinthium, anisum, sic ut pars hujus minima sit. Asclepiades aquam quoque salsam, et quidem per biduum, purgationis causa bibere cogebat, iis, quae urinam movent, rejectis. Quidam, superioribus omissis, per haec, et per eos cibos, qui extenuant, idem se consequi dicunt. Ego utique, si satis virium est, validiora; si parum, imbecilliora auxilia præfero. Si purgatio fuit, post eam triduo primo modice cibum oportet assumere ex media materia, et vinum bibere Græcum salsum, ut resolutio ventris maneat: tum altero triduo validiores cibos, et carnis quoque aliquid esse, intraque aquam manere: deinde ad superius genus victus reverti, cum eo, ut magis satietur; omissa Græco vino bibere integrum, austерum; atque ita per haec variare, ut interdum acres quoque cibos interponat, interdum ad salsum vinum redeat.

Per omne vero tempus utendum est exercitatione, frictione; si hiems est, balneo, si aestas, frigidis natationibus; lecto etiam, et conclavi cultiore, lusu, joco, ludis, lascivia, per quæ mens exhilaretur: ob quæ regius morbus dictus videtur.

ORDO.

aqua, vel amaras nubes, absinthium, anisum, cum mulsa aqua, sic ut sit minima pars hujus. or bitter almonds, wormwood, and anise with hydromel, but of this last the smallest portion. Asclepiades compelled his patients to drink salt water, for the space of two days, for the purpose of purging them, rejecting those things which promote urine. Some, omitting the former remedies, say, that they can obtain the same result by diureties and extenuating diet. Indeed I prefer the more potent remedies, if there be a sufficiency of strength; but the milder, if there be debility. If the patient have been purged, he ought to take food moderately for the first three days' afterwards of the middle class, and to drink salt Greek wine, in order to keep the bowels relaxed: then for the next three days to eat more substantial food, and also some flesh, and to remain on water for drink: afterwards to resume the former regimen, with this addition, that he may partake more freely: omitting the Greek wine, he ought to drink that which is pure and austere; and to vary these occasionally, interposing at one time acrid food, at another he may return to the salt wine.

But during the whole of this time exercise and friction must be employed; if in winter, the bath; if in summer, swimming in cold water; also the patient's bed and chamber ought to be more ornamented; and with mirth and jest, farce and frolic, and all those amusements calculated to exhilarate the mind; hence it appears to be called the royal disease. A discutient malagma applied over the pra-

CHAP. XXV.

OF ELEPHANTIASIS.

THAT disease which the Greeks call elephantiasis, is very common in some countries, although scarcely known in Italy, and is of the chronic class. The whole body is affected in such a manner, that even the bones may be said to be diseased. The surfaces of the body frequently exhibits blotches and tumours: their red colour is gradually converted into a black: the surface of the skin is unequally thick and thin, hard and soft, assuming a scaly appearance; the body becomes emaciated, the mouth, the calves, and feet swell; when the disease becomes inveterate, the fingers and toes are involved in the swelling, slight fever arises, which soon carries off its victim overwhelmed with so many afflictions.

Therefore at the commencement blood ought to be let immediately two days

ratro venter solvi : adhibenda tum, quanta sustineri potest, inedia est : paulum deinde vires reficiendæ, et ducenda alvus : post hæc, ubi corpus levatum est, uteudum est exercitatione, præcipueque cursu : sudor primum labore ipsius corporis, deinde etiam siccis sudationibus evocandus : frictio adhibenda : moderandumque inter hæc, ut vires conserventur. Balneum rarum esse debet ; cibus sine pinguibus, sine glutinosis, sine inflantibus : vinum, præterquam primis diebus, recte datur. Corpus contrita plantago et illita optime tueri videtur.

ORDO.
aut venter (debet) solvi nigro veratro : tum inedia est adhibenda, quanta potest sustinere : deinde vires reficiendæ paulum, et alvis ducenda : post hæc, ubi corpus est levatum, est utendum exercitatione, que præcipue cursu : sudor (est) primum eundus labore corporis ipsius, deinde etiam siccis sudationibus : frictio adhibenda : que moderandum inter hæc, ut vires conserventur. Balneum debet esse rarum ; cibus sine pinguibus, sine glutinosis, sine inflantibus : vinum datur recte, præterquam primis diebus. Contrita et illita plantago videtur tueri corpus optime.

TRANSLATION.

suecessively, or the bowels purged with black hellebore : then the most rigid abstinence must be enjoined : afterwards the strength may be improved a little, and the bowels relieved by injection : when the body has been alleviated by these means, exercise must be employed, and particularly running ; perspiration is to be elicited first by corporeal action of the body itself, and afterwards by dry sweatings : also friction must be applied ; but these means must be so moderated, that the strength may be preserved. The bath ought to be employed rarely ; the food should consist of nothing fat, glutinous, or flatulent : wine may be given with propriety, except on the first days. Plantain bruised and applied over the body, appears to be the best protection.

TRANSLATION.

CHAP. XXVII.

OF PARALYSIS.

Now resolution of the nervous system is of frequent occurrence every where: but sometimes it attacks the whole body, sometimes only parts. Ancient authors have named the first APOPLEXIA, the last PARALYSIS: but now I perceive PARALYSIS to be a common term for both. It is not an unusual occurrence for those whose limbs are violently paralysed to be carried off rapidly: but if they survive the shock, indeed they may live very long, yet seldom arrive at convalescence, and generally prolong a miserable vegetative existence, with a total loss of memory.

When it is partial, the disease is never acute, frequently chronic, and for the

Si omnia membra vehementer resoluta sunt, sanguinis detractio vel occidit, vel liberat: aliud curationis genus vix umquam sanitatem restituit, saepe mortem tantum differt, vitam interim infestat. Post sanguinis missionem, si non reddit et motus et mens, nihil spei superest; si reddit, sanitas quoque prospicitur.

At ubi pars resoluta est, pro vi et malo corporis, vel sanguis mittendus, vel alvus ducenda. Cetera caduc in utroque easu facienda sunt: siquidem vitare praeципue conuenit frigus; paulatimque ad exercitationes revertendum est, sic, ut ingrediatur ipse protinus, si potest: si id crurum imbecillitas prohibet, vel gestetur, vel motu lecti concurtiatur: tum id membrum, quod deficit, si potest, per se, sin minus, per alium moveatur, et vi quadam ad consuetudinem suam redeat. Prodest etiam torpantis membra summam cutem exasperasse, vel urticis caesam, vel imposito sinapi, sic ut, ubi rubore coepit corpus, haec removeantur. Scilla quoque contrita, bulbique contriti cum thure recte imponuntur. Neque alienum est, resina cutem tertio quoque die diutius vellere, pluribus etiam locis; aliquando sine ferro eucurbitulas admovere.

ORDO.
fere sanabilis. Post missionem sanguinis, si et motus et mens non reddit, nihil spei superest; si reddit, sanitas prospicitur quoque.

At ubi pars est resoluta, vel sanguis (est) mittendus, vel alvus (est) ducenda, pro vi et malo corporis. Cetera sunt facienda eadem in utroque easu: siquidem conuenit praecipue vitare frigus; que est revertendum paulatim ad exercitationes, sic, ut ingrediatur protinus ipse, si potest: si imbecillitas erurum prohibet id, vel gestetur, vel concutiat motu lecti: tum id membrum quod deficit, redeat ad suam consuetudinem, si potest, per se, sin minus, moveatur per alium, et quadam vi. Etiam prodest, exasperasse summam cutem torpantis membra, vel caesam urticis, vel sinapi imposito, sicut, ubi corpus coepit rubore, haec removeantur. Quoque contrita scilla, que contriti bulbii cum thure imponuntur recte. Neque est alienum, quoque vellere cutem resina dintius tertio die, etiam pluribus locis; aliquando admovere eucurbitulas

TRANSLATION.

most part curable. If all the limbs be violently paralysed, the extraction of blood either kills, or cures: any other mode of treatment scarcely ever restores health; often, only delays death, while it renders life intolerable. After blood-letting, if neither voluntary motion nor intelligence return, no hope remains; if they do return, there is also a prospect of recovery.

But when the paralysis is partial, either blood must be taken, or an injection administered proportioned to the strength of the patient and the violence of the disease. The other remedies to be adopted are the same in both cases: above all things it is proper to avoid cold; and to resume exercises by degrees, so that he may walk as soon as he is able: if debility of the legs prevent that, he may be carried or moved by the action of a (*suspended*) bed: then that limb which is affected should be moved by itself if possible; or if not, by another, and that it may be forced to return to its accustomed action. It is also beneficial to irritate the surface of the skin on the torpid limb, either by beating it with nettles, or by applying mustard on it, which may be removed when the part begins to grow red. Also brnised squills, or bulbous roots, beat up with frankincense. Neither is it improper, to vellicate the skin with resin for some considerable time every third day, and that too in many places; sometimes to apply the cupping instruments

Unctioni vero aptissimum est vetus oleum, vel nitrum aceto et oleo mistum. Quin etiam fovere aqua calida marina, vel, si ea non est, tamen salsa, magnopere necessarium est. Ac si quo loco vel naturales, vel etiam manufactae tales natationes sunt, iis potissimum utendum est; præcipueque in his agitanda membra, quæ maxime deficiunt: si id non est, balneum tamen prodest. Cibus esse debet ex media materia, maximeque ex venatione; potio sine vino, aquæ calidæ: si tamen vetus morbus est, interponi quarto vel quinto die purgationis causa vinum Graecum salsum potest. Post cœnam utilis vomitus est.

2. Interdum vero etiam nervorum dolor oriri solet. In hoc casu non vomere, non medicamentis urinam movere, non exercitatione sudorem, ut quidam præcipiunt, expedit. Bibenda aqua est bis in die: in lectulo leniter satis diu corpus perficandum est, deinde retento spiritu: ab ipsa exercitatione potius superiores partes movendæ: balneo raro utendum: mutandum subinde peregrinationibus cœlum. Si dolor est, ea ipsa pars sine oleo, nitro ex aqua perungenda est; deinde invol-

las sine ferro. Vero vetus oleum, vel nitrum mistum aecto et oleo est aptissimum unctioni. Quin etiam fovere calida marina aqua, vel, si non est ea, tamen salsa, est magnopere necessarium. Ac si sint tales natationes (in) quo loco vel naturales, vel etiam manufactæ, est utendum iis potissimum; que membra quæ deficiunt maxime, præcipue (sunt) agitanda in his: si non est id, tamen balneum prodest. Cibus debet esse ex media materia, que maxime ex venatione; potio calidæ aquæ, sine vino: si tamen morbus est vetus, Graecum salsum vinum potest interponi quarto vel quinto die causa purgationis. Vomitus est utilis post cœnam.

2. Vero interdum dolor nervorum etiam solet oriri. In hoc casu expedit non vomere, non movere urinam medicamentis, non (movere) sudorem exercitatione, ut quidam præcipiunt. Aqua est bibenda bis in die: corporis est perficandum leniter, satis diu, in lectulo, deinde spiritu retento: superiores partes (sunt) movendæ potius ab exercitatione ipsa: utendum balneum raro: mutandum cœlum subinde peregrinationibus. Si est dolor, ea pars ipsa est perungenda nitro ex aqua, sine oleo; de-

TRANSLATION.

without incision. But old oil is most fit for unction, or nitre mixed with vinegar and oil. Moreover it is highly necessary to foment with warm sea-water, or if that is not to be had, at least with salt water. If there be any natural swimming places, or even such as may be constituted by art of this kind, they should be used by all means: and the limbs which are most affected, ought to be exercised there especially: if that cannot be had, still the common bath will be found serviceable. The food ought to be of the middle material, and especially of game: to drink warm water, without wine: but if the disease have become chronic, the Greek salt wine may be interposed every fourth or fifth day as a purgative. An emetic after supper is useful.

2. Sometimes there arises a pain of the nerves. In this ease it is not expedient either to excite vomiting by emetics, or promote the urine by diuretics, or to elicit diaphoresis by exercise as some physicians prescribe. Water must be drunk twice in the day: the body should be rubbed gently for a considerable time in bed, afterwards retaining the breath; during the exercise the superior parts are to be moved in preference: the bath to be used seldom: occasionally changing his climate by travelling. If there be pain in any part, that is to be anointed with nitre and water without oil; afterwards to be wrapped up, and held over a gentle

venda, et subjicienda pruna lenis, et sulphur, atque ita id suffumigandum; idque aliquamdiu faciendum, sed jejuno, cum bene jam concoxerit. Cucurbitulæ quoque sæpe dolenti parti admovendæ sunt, pulsandusque leniter inflatis vesicis bubulis is loeus est. Utile est etiam sevum miseere eum hyosyami et urtieæ contritis seminibus, sie, ut omnium par modus sit, idque imponere: fovere aqua, in qua sulphur decoctum sit. Utriculi quoque recte imponuntur aqua calida repleti, aut bitumen eum hordeacea farina mistum. Atque in ipso potissimum dolore, utendum gestatione vehementi est: quod in aliis doloribus pessimum est.

3. Tremor autem nervorum æque vomitu medicamentisque urinam moventibus intenditur. Inimica etiam habet balneum, assasque sudationes. Bibenda aqua est: aeri ambulatione utendum; item unetionibus, frictionibusque, maxime per seipsum: pila, similibusque superiores partes dimovendæ: eibō quolibet utendum, dummodo eoneoctioni utique studeatur: secundum eibum, euris abstinendum: rarissima venere opus est. Si quando quis in eam prolapsus est, tum oleo leniter diuque in

inde (sunt) involvenda, et lenis pruna, et sulphur subjicienda, atque ita fumigandum id; que id faciendum aliquamdiu, sed jejuno, cum jam concoxerit bene. Quoque cucurbitulæ sunt admovendæ sæpe dolenti parti, que is locus est pulsandus leniter inflatis bulbulis vesicis. Est etiam utile misere sevum eum contritis seminibus hyoscyami et urtieæ, sie, ut modus omnium sit par, que imponere id: fovere aqua, in qua sulphur sit decoctum. Quoque utriculi repleti calida aqua imponuntur recte, aut bitumen mistum eum hordeacea farina. Atque est potissimum utendum vehementi gestatione in dolore ipso: quod est pessimum in aliis doloribus.

3. Autem tremor nervorum intenditur æque vomiti, que medicamentis moventibus urinam. Etiam habet balneum que assas sudationes inimicia. Aqua est bibenda: (est) utendum aeri ambulatione; item unctionibus, que frictionibus, maxime per se ipsum: superiores partes dimovendæ pila, que similibus: (est) utendum quolibet eibō, dummodo utique studeatur concoctioni: secundum cibum, (est) abstinendum curis: est opus venere rarissima. Si quando quis est prolapsus in eam, tum debet perfriari leniter, que din oleo in lec-

TRANSLATION.

live coal with sulphur, and in this manner to be fumigated: and that should be done for some time, but while the stomach is empty and after he shall have digested well. The epping-glasses also ought to be applied frequently to the affected part, and that place should be gently beaten with inflated bladders. Equal parts of suet, the bruised seeds of henbane and nettles, mixed together and laid on the part will be found useful: also to foment with water in which sulphur has been boiled. Small leather bottles filled with hot water, or bitumen mixed with barley-meal may be very properly applied to the part. Vehement gestation should be employed, and especially during the pain itself, which in other affections would be extremely pernicious.

3. A tremor of the nerves is also aggravated by vomiting and diuretics. The bath and dry perspiration are inimical. The drink should be water: to employ brisk walking; also unetion and friction, especially applied by himself: the superior extremities must be exercised by the ball and similar games: he may take any food he likes, provided that a due regard be paid to digestion: after food he must abstain from every care; and sexual indulgencies ought to be few and far between. If he should at any time luxuriate in this particular, then he ought to

lectulo perficari manibus puerilibus potius, quam virilibus, debet.

4. Suppurationes autem, quae in aliqua interiori parte oriuntur, ubi nota fuerint, primum id agere oportet per ea cataplasma, quae reprimunt, ne coitus inutilis materiae fiat; deinde, si haec victa sunt, per ea malagmata, quae digerunt, ut dissipetur. Quod si consecuti non sumus, sequitur, ut evocetur: deinde, ut maturescat. Omnis tum vomice finis est, ut rumpatur: indiciumque est, pus vel alvo vel ore redditum. Sed nihil facere oportet, quominus, quidquid est puris, excedat. Utendum maxime sorbitionibus est, et aqua calida. Ubi pus ferri desit, transeundum ad faciles quidem, sed tamen validiores et frigidos cibos, frigidamque aquam, sic ut ab egelidis tamen initium fiat.

Primoque cum melle quædam edenda, ut nuclei pinei, vel Græcae nuces, vel Avellanæ: postea submovendum id ipsum, quo maturius induci cicatrix possit. Medicamentum eo tempore ulceri est, succus assumptus vel porri vel marrubii, et omni cibo porrum ipsum adjectum. Oportebit autem uti in iis partibus, quae non afficiuntur, frictioni-

tulo potins puerilibus manibus, quam virilibus.

4. Autem ubi suppurationes, quae oriuntur aliqua interiori parte, fuerint nota, primum oportet agere id per ea cataplasma, quae reprimunt, ne fiat inutilis coitus materia; deinde, si haec victa sunt, ut dissipetur per ea malagmata, quae digerunt. Quod si non sinus consequenti, sequitur, ut evocetur: deinde, ut maturescat. Tum est finis omnis vomicæ, ut rumpatur: que pus redditum vel alvo vel ore, est indicium. Sed oportet facere nihil, quo quidquid est puris, excedat minus. Est maxime utendum sorbitionibus, et calida aqua. Ubi pus desit ferri, (est) quidem transeundum ad faciles, sed tamen validiores et frigidos, que frigidam aquam, tamen sic ut fiat initium ab egelidis.

Que primo edenda quædam cum melle, ut pinei nuclei, vel Græcae nuces, vel Avellanæ: postea submovendum id ipsum, quo cicatrix possit induci maturius. Succus vel porri vel marrubii assumptus, est medicamentum ulceri eo tempore, et porrum ipsum adjectum omni cibo. Antem oportebit uti frictionibus in iis partibus, quae non afficiuntur.

TRANSLATION.

be gently rubbed with oil for a long time in bed, by the hands of a boy rather than by that of a man.

4. But when abscesses, which arise in some internal part, have been detected, it behoves us to attend to these first, and by the application of repellent cataplasms prevent the formation of matter which would be injurious; afterwards, if these have been overcome; let them be dispersed by dissentient malagmata. But if we have not succeeded, it follows, that they should be brought forward: afterwards, to effect maturation: then the termination of every abscess is, that it may burst: and this is indicated by an evacuation of pus, either by the mouth or anus. But nothing should be done, by which the discharge of matter may be rendered less. Gruels and warm water must be the principal nourishment. When the discharge of matter has ceased, we may pass to such food, as may be easily digested, but yet more nutritive and cold; also cold water, and that a beginning be made with lukewarm things.

At first some things are to be eaten with honey, as pine nuts, or sweet almonds, or hazel nuts. Afterwards even the honey must be omitted, by which means a cicatrix may be the sooner formed. The expressed juice of the leek or horehound being taken at that time is medicinal for the ulcer; and adding leeks to every meal is advantageous. But we should use friction to those parts which are not

bus; item ambulationibus lenibus: vitandumque erit, ne vel luctando, vel currendo, vel alia ratione sanescentia ulcera exasperentur. In hoc enim morbo perniciosus, ideoque omni modo cavendus sanguinis vomitus est.

THE FOURTH BOOK OF AURELIUS CORNELIUS CELSUS ON MEDICINE.

CHAP. I.

OF THE INTERNAL PARTS OF THE HUMAN BODY.

HITHERTO those species of diseases have been treated of, which so often affect the whole body, that a determined locality cannot be assigned to them: I shall now speak of those which are local. Now the diseases and treatment of all internal parts will be more easily understood, when I shall have previously described briefly their *structure* and relative position.

Therefore the head, and those parts contained in the mouth, are bounded not only by the tongue and palate, but also, as far as they are exposed to our view. On the right and left of the throat are large veins which are named sphagittides or

σφαγίτιδες nominantur; itemque arteriæ, quas *καρωτίδας* voeant, sursum proeedentes ultra aures feruntur. At in ipsis cervieibus glandulæ positæ sunt, quæ interdum eum dolore intumescunt.

Deinde duo itinera incepunt: alterum, asperam arteriam nominant; alterum, stomaehum. Arteria exterior ad pulmonem; stomachus interior ad ventriculum fertur: illa spiritum; hie eibum recipit. Quibus eum diversæ viæ sint, qua coeunt, exigua in arteria sub ipsis faueibus lingua est; quæ, eum spiramus, attollitur, eum eibum potionemque assumimus, arteriam elaudit.

Ipsa autem arteria, dura et cartilaginosa, in gutture assurgit, eeteris partibus residit. Constat ex circulis quibusdam, compositis ad imaginem earum vertebrarum, quæ in spina sunt: ita tamen, ut ex parte exteriore aspera, ex interiore, stomachi modo laevis sit: eaque deseendens ad præcordia eum pulmone committitur.

Is spongiosus, ideoque spiritus capax, et a tergo spinæ ipsi junetus, in duas fibras, unguilæ bubulæ modo, dividitur.

ORDO.

σφαγίτιδες (sphagittides); qne item arteriæ quas voeant *καρωτίδας* (carotidas) procedentes sursum feruntur ultra aures. At glandulæ sunt positæ in cervieibus ipsis: quæ interdum intumescunt eum dolore.

Deinde duo itinera incepunt: nominant alterum asperam arteriam (*trachea*); alterum, stomachum (*œsophagus*). Arteria exterior fertur ad pulmonem; stomachus interior (fertur) ad ventriculum. Illa recipit spiritum; hie eibum. Cum sint diversæ viæ quibus, quæ coennt, est exigua lingula (epiglottis) in arteria sub faneibus ipsis; quæ, eum spiramus, attollitur; cum assumimus eibum qne potionem, claudit arteriam.

Antem arteria (*trachea*) ipsa est dura et cartilaginosa, assurgit in gutture; residit (in) cæteris partibus. Constat ex quibusdam circulis, compositis ad imaginem earum vertebrarum, quæ sunt in spina: tamen ita, ut sit aspera ex exteriore parte; (sit) laevis ex interiore modo stomachi: que ea descendens committitur cum pulmone ad præcordia. Is (est) spongiosus, que ideo (est) capax spiritus, et junctus spinæ ipsi a tergo, dividitur in duas fibras, modo bubulæ unguilæ.

TRANSLATION.

jugular; and also arteries, which they call carotides, and proceeding upwards extend beyond the ears. But glands are situated in the neck itself which sometimes become painfully swollen.

Here two passages begin: they term one the rough artery, or *trachea*; the other, the stomach, or *œsophagus*. The trachea being situated more anteriorly passes into the lungs; the œsophagus is placed rather posteriorly, and connects to the stomach: the former is for the reception of air, the latter for food. These two passages having a distinct course, where they come in contact, there is a small tongue or *epiglottis* affixed to the trachea, directly under the fances: now this *valve* or *little tongue* is elevated when we breathe; but it effectually shuts the orifice of the trachea when we take food or drink.

The trachea itself is hard and cartilaginous, rises up in the throat, and recedes in other parts. It is composed of several *imperfect* circles, arranged in the form of those vertebræ which are in the spine: yet so that it is rough externally, and smooth internally, like the œsophagus: and in this manner descending the præcordia, it is connected with the lungs. These are spongy in their structure, and on that account capable of containing air, and being joined posteriorly to the spine, are divided into two lobes, resembling an ox's hoof.

Huie eor annexum est, natura musculosum, in peetore sub sinistriore mamma situm; duosque quasi ventriculos habet. At sub corde atque pulmone, transversum ex valida membrana septum est, quod a præcordiis uterum dividit; idque nervosum, multis etiam venis per id discurrentibus, a superiore parte, non solum intestina, sed jœur quoque lienemque discernit. Hæc viscera proxime, sed infra tamen posita, dextra sinistraque sunt.

Jœur a dextra parte sub præcordiis ab ipso septo orsum, intrinseeus eavum, extrinsecus gibbum est: quod prominens leviter ventriculo insidet, et in quatuor fibras dividitur. Ex inferiore vero parte ei fel inhæret. At lienis sinistra, non eidem septo, sed intestino innexus est, natura mollis et rarus, longitudinis erassitudinisque modicæ; isque paulum a costarum re-gione in uterum exeedens, ex maxima parte sub his conditur. Atque hæc quidem juncta sunt. Renes vero diversi; qui lumbis sub imis costis inhærent, a parte earum rotundi, ab altera resimi; qui et venosi sunt, et ventriculos habent, et tunieis super conteguntur.

ORDO.

Cor est annexum huic, musculosum natura, situm in peetore sub sinistriore mamma; que habet quasi duos ventriculos. At sub corde atque pulmone, est transversum septum (diaphragma) ex valida membrana, quod dividit uterum a præcordiis; idque, nervosum (que) etiam multis venis discurrentibus per id, non solum discernit intestina, a superiore parte, sed quoque jœur que lienem. Hæc viscera sunt proxime, sed tamen posita infra, dextra que sinistra.

Jœur orsum a dextra parte ab septo ipso sah præcordiis, est eavum intrinsecus, (est) gibbum extrinsecus. Quod prominens, insidet leviter ventriculo, et dividitur in quatnor fibras. Vero fel inhæret ci ex interiore parte. At lienis sinistra, non est annexus eidem septo, sed intestino, natura mollis et rarus, modicæ longitudinis que crassitudinis; que is exceedens paulum a regione costarum in uterum, conditur ex maxima parte sub his. Atque quidem hæc sunt juncta. Vero renes (sunt) divisi; qui inhærent lumbis sub imis costis, rotundi a parte earum, resimi ab altera; qui sunt et venosi, et habent (duos) ventriculos, et conteguntur super tunicis.

TRANSLATION.

With these lobes the HEART is connected by the pulmonary vessels: this is by nature a muscular organ, situated in the thorax under the left breast; and has two small cavities, named ventricles. But below the heart and lungs there is the transverse septum (*diaphragm*) composed of a strong membrane, which divides the abdomen from the præcordia, this being of a tendinous texture, and very vascular, separates not only the intestines, but also the liver and spleen from the superior parts. These viscera are in proximity, but yet placed beneath, on the right and left.

The liver having the origin from the diaphragm itself, on the right side under the præcordia, is interually concave, externally convex: which being prominent, slightly rests on the stomach, and is divided into four lobes. The gall-bladder adheres to it inferiorly. But the spleen being on the left, is not connected to the diaphragm, but to the intestine; is soft and incompact in its texture, of a moderate length and thinness; and advancing a little beyond the region of the ribs into the abdomen, is principally covered by them. Indeed these are in contact(1). But the kidneys are separate, which adhere to the loins below the last ribs, convex towards these and internally concave: they are vascular, containing two ventricles, and are invested with tunics.

Ac viscerum quidem hæ sedes sunt. Stomachus vero, qui intestinorum principium est, nervosus a septima spine vertebra incipit; circa præcordia eum ventriculo committitur. Ventriculus autem, qui receptaculum eibi est, constat ex duobus tergoribus; isque inter lienem et jecur positus est, utroque ex his paulum super eum ingrediente. Suntque etiam membranulae tenues, per quas inter se tria ista connectuntur, jungunturque ei septo, quod transversum esse, supra posui. Inde ima ventriculi pars paulum in dexteriore partem conversa, in summum intestinum coarctatur.

Hanc juncturam $\pi\upsilon\lambda\omega\rho\circ\gamma$ Graeci vocant, quoniam portæ modo in inferiores partes ea, quæ excreturi sumus, emittit. Ab ea jejunum intestinum incipit, non ita implicitum: eui tale vocabulum est, quia numquam, quod accipit, continet; sed protinus in inferiores partes transmittit. Inde tenuius intestinum est, in sinus vehementer implicitum: orbes vero ejus per membranulas singuli cum interioribus connectuntur; qui in dexteriore partem conversi, et e regione dexteroris coxae finiti, superiores tamen partes magis complent.

ORDO.

Ac quidem hæ sunt sedes viscerum. Vero stomachus (œsophagus), qui est principium intestinorum, (est) nervosus, incipit a septima vertebra spine; committitur circa præcordia eum ventriculo. Autem ventriculus, qui est receptaculum cibi, constat ex duobus tergoribus; que is est positus inter lienem et jecur, utroque ex his ingrediente paulum super eum. Que etiam sunt tenues membranulae, per quas ista tria (viscera) connectuntur inter se, quae junguntur ei septo, quod posui supra esse transversum. Inde ima pars ventriculi conversa paulum in dexteriore partem, coaretur in summum intestinum.

Graeci vocant hanc juncturam $\pi\upsilon\lambda\omega\rho\circ\gamma$ (pylors), quoniam emitit ea quæ sumus excreturi, in inferiores partes, modo portæ. Jejunum intestinum incipit ab ea, non ita implicitum: eui tale vocabulum est, quia numquam continet, quod accipit; sed transmittit (quod accipit) protinus in inferiores partes. Inde est tenuius intestinum (ileum), vehementer implicitum in sinus: vero singuli orbes ejus connectuntur cum interioribus per membranulas; qui conversi in dexteriore partem, et finiti e regione dexteroris coxae, tamen compleat superiores partes magis.

TRANSLATION.

These then are the relative situations of the viscera. Now the œsophagus which is the commencement of the alimentary canal, being a membranous tube, arises opposite the seventh vertebra of the spine, and is united with the stomach about the præcordia. The stomach which is the receptacle of food, consists of two coats, and is situated between the spleen and the liver; each of these passing a little over it. There are also some fine membranes, by which these three are connected together, and joined to the transverse septum, which I have described above. Then the inferior curve of the stomach converging a little towards the right side, becomes contracted and forms the upper intestine (*or duodenum*).

This junction between the stomach and duodenum, the Greeks call pylorus, because it discharges the office of a door keeper to the lower intestines, by permitting the escape of such things, which we are about to excrete. After the duodenum, begins the jejunum, not so much convoluted: which, as the name imports, never retains what it receives; but immediately transmits it into the inferior parts. Thence begins the smaller intestine, or ileum, highly convoluted; each of whose convolutions being held down by small connecting membranes; which being turned towards the right hypogastric region terminates in the great intestine, yet occupy more the superior parts.

Deinde id intestinum cum crassiore altero transverso committitur, quod a dextra parte incipiens, in sinistriorem pervium et longum est, in dexteriores nou est; ideoque cæcum nominatur. At id, quod pervium est, late fusum atque sinuatum, minusque quam superiora intestina nervosum, ab utraque parte hue atque illue volutum, magis tamen sinistriores inferioresque partes tenens, contingit jecur atque ventrieulum: deinde eum quibusdam membranulis a sinistro rene venientibus jungitur; atque hinc dextra recurvatum in imo dirigitur, qua excrenit; ideoque id ibi rectum intestinum nominatur.

Contegit vero universa hæc omentum, ex inferiore parte lœve et strictum, ex superiore mollius; cui adeps quoque innaseitur; quæ sensu, sicut cerebrum quoque et medulla, earet. At a renibus singulæ venæ, eolore albæ, ad vesieam feruntur: οὐρητῆρες Græci vocant, quod per eas inde desendentem urinam in vesieam destillare eoneipiunt. Vesiea autem ipso sinu nervosa et duplex, cervice plena atque earnosa, jungitur per venas eum intestino, eoque osse, quod pubi subest: ipsa soluta atque liberior est: aliter in viris atque in

ORDO.

Deinde id intestinum committitur cum altero crassiore transverso, quod incipiens a dextra parte, est longum et pervium in sinistriorem, non est in dexteriores; que ideo nominatur cæcum. At id (intestinum) quod est pervium, late fusum atque sinuatum, que minus nervosum quam superiora intestina, volutum ab utraque parte hue atque illuc, tamen tenens sinistriores que inferiores partes magis, contingit jecur atque ventriculum: deinde jungitur cum quibusdam membranulis venientibus a sinistro rene; atque hinc recurvatum in dextra dirigitur in imo, qua excernit: que ideo id nominatur ibi rectum intestinum.

Vero omentum contegit universa hæc, lœve et strictum ex inferiore parte, mollius ex superiore; cui adeps quoque innascitur; quæ caret sensu, sicut cerebrum et quoque medulla. At singulæ vene, albæ (in) colore ferruntur ad vesicam a renibus; Græcivocant οὐρητῆρες (ureters), quod concipiunt urinam descendenter inde per eas destillare in vesicam. Autem vesica (cst) nervosa et duplex (in) sinu ipso, plena atque carnosa cervix, jungitur cum intestino per venas, que eo osse, quod subest pubi: est soluta ipsa atque liberior: posita aliter in viris atque foeminiis.

TRANSLATION.

Afterwards, this intestine is joined by a thicker transverse one, which commences on the right side, is pervious and extends towards the left, forming an arch, which is not so towards the right, and for this reason is named the cæcum. But that portion which is open, being of large capacity and sinuous, less tendinous than the upper intestines, and arranged in various convolutions on each side, yet occupying the left and lower parts most, touches the liver and the stomach: then it is connected with some small membranes coming from the left kidney; and taking a curve to the right forms the descending portion, where it excretes the faeces; and on that account is there termed the straight gut or rectum.

All these parts are covered by omentum, the under surface of which is smooth and contracted, the upper softer: and there is also fat formed on it, which like the brain and marrow is destitute of feeling. Each kidney sends a tube of a white colour to be inserted into the bladder: the Greeks call them ureters, because they imagine the urine to be conveyed by these into the bladder. The body of this organ is membranous and duplex itself, but full and fleshy about the cervix, and is connected by veins (*cellular tissue*) to the rectum, and to that bone, which is under the pubes by the two anterior ligaments: this organ in itself is loose and very free: be-

fœminis posita. Nam in viris juxta reetum intestinum est, potius in sinistram partem inelinata; in fœminis super genitale earum sita est, supraque lapsa, ab ipsa vulva sustinetur.

Tum in maseulis iter urinæ spatiösus et compressus a eerviee hujus de seendit ad eolem: in foeminis brevius et plenius, super vulvæ eervieem se ostendit. Vulva autem in virginibus quidem admodum exigua est: in mulieribus vero, nisi ubi gravidæ sunt, non multo major, quam ut manu eomprehendatur. Ea, reeta tenuataque eerviee, quem canalem voeant, contra medianam alvum orsa, inde paulum ad dexteriorem coxam convertitur; deinde super reetum intestinum progressa, ilii fœminæ latera sua innectit. Ipsa autem ilia inter eoxas et pubem imo ventre posita sunt.

A quibus ae pube abdomen sursum versus ad præcordia pervenit; ab exteriore parte, evidenti cute; ab interiore levi membrana inclusum, quæ omento jungitur; *περιτόναιος* autem a Græcis nominatur.

ORDO.

Nam in viris est juxta rectum intestinum, inclinata potius in sinistram partem; est sita in fœminis super genitale earum, que, lapsa supra, sustinetur ab vulva ipsa.

Tum iter urinæ deseendit spatiösus et compressus a cervice hujus ad colem in maseulis: brevius et plenius in fœminis, ostendit se super cervicem vulvæ. Autem vulva in virginibus quidem est admodum exigua: vero non est multo major, quam ut eomprehendatur manu, in mulieribus, nisi ubi sunt gravidæ. Ea orsa, contra medianam alvum, recta que tenuata cervice, quem voeant canalem, inde convertitur paulum ad dexterorem coxam; deinde progressa super reetum intestinum, innectit sua latera ilii fœminæ. Autem ilia ipsa sunt posita imo ventre inter coxas et pubem.

A quibus ac pube abdomen pervenit sursum versus ad præcordia; inclusum evidenti cute, ab exteriore parte; levi membrana ab interiore, quæ jungitur omento; autem nominatur a Græcis *περιτόναιος* (peritoneum).

TRANSLATION.

ing placed differently in males from those in females. For in the male it is in juxta position to the rectum, rather inlining to the left side: in the female it is placed above the genital organs, and is supported by the uterus itself as it glides over it.

Now in the male the urethra is much longer and narrower, and proceeds from the neck of the bladder to the penis: in females it is shorter and more capacious, and shows itself above the neck of the womb. The uterus in virgins, indeed, is very small; even in women, unless they be pregnant, not much larger, than what may be grasped in the hand. It commences opposite the median line of the abdomen, with a straight and narrowed neck, termed the vagina, and has a slight inclination towards the right hip; then having proceeded over the rectum, it unites its sides to the ilia of the female.

The ilia themselves are placed between the hips and pubes at the lower part of the abdomen. From which and the pubes, the abdomen extends upwards to the præcordia; externally covered by cuticle which is evident; internally it is lined by a fine membrane, which is joined to (*forms*) the omentum, and is named by the Greeks peritouæum.

CAP. II.

DE CURATIONE MORBORUM, QUI NASCUNTUR A CAPITE.

1. His veluti in conspectum quemdam, quatenus scire curanti necessarium est, adductis, remedia singularum laborantium partium exsequar, orsus a capite: sub quo nomine nunc significo eam partem, quæ capillo tegitur: nam oculorum, aurium, dentium dolor, et si quis similis est, alias erit explicandus.

In capite autem interdum acutus et pestifer morbus est, quam *κεφαλαιά* Græci vocant: cuius notæ sunt, horror validus, nervorum resolutio, oculorum caligo, mentis alienatio, vomitus, sic, ut vox supprimatur; vel sanguinis ex naribus cursus, sic, ut corpus frigescat, anima deficiat: præter hæc, dolor intolerabilis, maxime circa tempora, vel occipitum. Interdum autem in capite longa imbecillitas, sed neque gravis, neque periculosa, per hominis aetatem est: interdum gravior dolor, sed brevis, neque tamen mortiferus; qui vel vino, vel cruditate, vel frigore, vel igne, aut

CAP. II.

DE CURATIONIBUS MORBORUM, QUI NASCUNTUR A CAPITE.

1. His adductis veluti in quemdam conspectum, exsequar remedia singularum laborantium partium quatenus est necessarium curanti seire, orsus a capite: sub quo nomine significo eam partem, quæ tegitur a capillo: nam si est quis dolor oculorum, aurium, dentium, et similiis, erit explicandus alias.

Autem interdum est aetus et pestifer morbus in capite, quam Græci vocant *κεφαλαιά* (cephalaia). Cuius validus horror, resolutione nervorum, caligo oculorum, alienatio mentis, vomitus, sic, ut vox supprimatur, sunt notæ; vel eurus sanguinis ex naribus, sic, ut corpus frigescat, (que) anima deficiat: præter hæc, intolerabilis dolor, maxime ejusmodi tempora, vel occipitum. Autem interdum est longa imbecillitas in capite, sed per aetatem hominis (est) neque gravis, neque periculosa. Interdum (est) gravior, sed brevis dolor, tamen neque (est) mortiferus; qui contrahitur vel vino, vel cruditate, vel frigore, vel igne, aut

TRANSLATION.

CHAP. II.

TREATMENT OF DISEASES ARISING FROM THE HEAD.

1. HAVING demonstrated those parts as it were to the view, as far as it is necessary for a physician to know them, I shall proceed to the treatment of the several parts affected, commencing with the head: under which I designate that part only which is covered with hair: for pains of the eyes, ears, teeth, and the like will be explained elsewhere.

Now there is sometimes an acute and destructive disease in the head, which the Greeks call ephalaia: the symptoms of which are a violent shivering, nervous debility, dimness of sight, mental alienation, vomiting, suppression of the voice, or epistaxis, with coldness of the body, and syncope: besides these, there is an insupportable pain, especially around the temples, or oeciput. But there is sometimes a permanent debility of the head, during the whole of a person's life, which is neither severe nor dangerous. Sometimes there is a more violent pain, but of short duration, neither is it fatal; this may arise either from wine or indigestion, or cold,

sole contrahitur. Hique omnes dolores modo in febre, modo sine hae sunt; modo in toto capite, modo in parte; interdum sie, ut oris quoque proximam partem exerueient.

Præter hæc etiamnum invenitur genus, quod potest longum esse; ubi humor eutem inflat, eaque intumescit, et prementi digito cedit: *ὑδροκέφαλον* Graeci appellant. Ex his id, quod seundo loeo positum est, dum leve est, qua sit ratione eurandum, dixi, eum persequerer ea, quæ sani homines in imbecillitate partis alienujus facere deberent. Quæ vero auxilia sint capit, ubi eum febre dolor est, eo loeo explieatum est, quo febrium euratio exposita est. Nune de eeteris dieendum est.

Ex quibus id, quod acutum est, et id, quod supra consuetudinem intenditur, idque, quod ex subita causa, et si non pestiferum, tamen vehemens est, primam eurationem habet, qua sanguis mittatur. Sed id, nisi intolerabilis dolor est, supervacuum est: satiusque est abstinere a cibo; si fieri potest, etiam a potione; si non potest, aquam bibere. Si postero die dolor remanet, alvum dueere, sternutamenta evocare, nihil

ORDO.
sole. Quæ omnes hi dolores sunt modo in febre, modo sine hac: modo excrucient in toto capite, modo in parte; interdum sic, ut quoque excrucient proximam partem oris.

Etiandum præter hæc, genus (morbi) invenitur, quod potest esse longum; ubi humor inflat cutem, que ea intumescit, et cedit digito prementi: Graeci appellant *ὑδροκέφαλον* (hydrocephalus). Ex his id, quod est positum (in) secundo loco, dixi, qua ratione sit curandum, dum est leve, eum persequerer ea, quæ, sani homines deberent facere in imbecillitate alienujus partis. Vero quæ sint auxilia capit, ubi est dolor cum febre, est explicatum eo loco, quo euratio febrium est exposita. Nune est dieendum de cæteris.

Ex quibus id, quod est acutum, et id, quod intenditur supra consuetudinem, que id, quod (est ortus) ex subita causa, et si non est pestiferum, tamen (est) vehemens, habet primam euratiōnem, qua sanguis mittatur. Sed id, est supervacuum, nisi est intolerabilis dolor: que est satius, abstinere a cibo; (que) etiam a potione, si potest fieri; si non potest (abstinere), bibere aquam. Si dolor remanet postero die, duere alvum, (que) evocare sternutamenta, assumere nihil, nisi

TRANSLATION.

or heat, or a scorching sun. All these pains are sometimes accompanied with, and sometimes without fever; sometimes in the whole orbit, sometimes in a part; sometimes it extends even with excruciating torment to the contiguous part of the face.

Besides these, there is another genus to be met with, which may become chronic: this is when a fluid distends the skin, the part appears tumefied and yields to the pressure of the finger: the Greeks call this hydrocephalus. I have already treated of these kinds mentioned in the second place, when the complaint is light, where I have explained those methods to be observed by people in ordinary health having some partial weakness. Also the requisite remedies when head-ache is accompanied with fever, have been explained in that part which came under the treatment of fevers. Now I shall proceed with the others.

The first step to be taken with that which is acute, and that which is unusually violent, and that arising from some sudden cause, although not fatal, yet being very severe, is to let blood. But that remedy is unnecessary, unless the pain be insupportable: and it is advisable to abstain from food; and also from drink if possible; if not, to drink water. If on the following day the pain still remain, let the bowels be relieved by injection; sneezing be excited; and nothing taken but

assumere, nisi aquam. Sæpe enim dies unus aut alter totum dolorem hac ratione discutit; utique si ex vino vel cruditate origo est.

Si vero in his auxilii parum est, tonderi oportet ad cutem: deinde considerandum est, quæ causa dolorem excitat. Si calor, aqua frigida multa perfundere caput expedit: spongiam concavam imponere, subinde in aqua frigida expressam: ungere rosa et aceto, vel potius his tinctam lanam succidam imponere, aliave refrigerantia cataplas mata.

At si frigus nocuit, caput oportet perfundere aqua calida marina, vel certe salsa, aut in qua laurus decocta sit: tum caput vehementer perficere: deinde calido oleo implere et veste velare. Quidam etiam id deviciunt; alii cervicalibus vestimentisque onerant, et sic levantur; alios calida cataplasma adjuvant. Ergo etiam, ubi causa incognita est, videre oportet, refrigerantia magis, an calefacientia leniant, et iis uti, quæ experimentum approbarit.

At si parum causa discernitur, perfundere caput, primum aqua calida, sicut supra præceptum est, vel salsa, vel ex lauro decocta; tum frigida posca.

ORDO.

aquam. Eius unus aut alter dies sæpe discutit totum dolorem hæ ratione; utique, si origo est ex vino vel cruditate.

Vero si est parum auxilii in his, oportet tondere ad cutem: deinde est considerandum, quæ causa excitarit dolorem. Si calor (est causa) expedit perfundere multa frigida aqua caput: impone concavam spongiam, subinde expressam frigida aqua: ungere rosa et aceto, vel potius iuponere succidam lanam tinctam his, ve alia refrigerantia cataplas mata.

At si frigus noenit, oportet perfundere calida marina aqua caput, vel certe salsa, aut (aqua) in qua laurus sit decocta: tum perficie caput velicuerter: deinde implere calido oleo et velare veste. Quidam etiam deviciunt id; alii onerant cervicalibus que vestimentis, et sic levantur; calida cataplasma adjuvant alios. Ergo etiam, ubi causa est incognita, oportet videre, an refrigerantia leniant magis, (an) calefacientia, et uti iis, quæ experimentum approbarit.

At si causa discernitur parum, (est) perfundere caput, primum calida aqua, sicut est præceptum supra, vel salsa (aqua), vel decocta ex lauro; tum frigida posca.

TRANSLATION.

water: for this treatment often removes the pain in a day or two; especially if it arose from wine or indigestion.

But if these remedies have afforded but little relief, the hair should be cut close to the scalp: then we should consider well the exciting cause of pain. If heat, it is expedient to pour plenty of cold water over the head; to apply a concave sponge occasionally expressed out of cold water; to anoint with rose oil and vinegar, or rather lay on rancid wool dipped in these, or some refrigerant cataplasms.

But if cold have brought on the malady, it will be proper to pour warm sea water upon the head, or at least salt water, or water in which laurel has been boiled: then to rub the head smartly; afterwards to drench it with warm oil, and to cover it. Some even bind it up; others load it with neckcloths (2), or napkins, and are in this way relieved; others find relief in warm cataplasms: and when the cause is unknown, it is proper to try, whether refrigerants, or calefactives give most relief, and to select those which experience shall have approved of.

But if the cause be obscure, it is proper to drench the head first with warm water, as above prescribed, or with salt water, or laurel water; then with cold

Illa in omni vetusto capit is dolore eomunia sunt : sternutamenta excitare, inferiores partes vehementer perfriare, gargarizare iis, quæ salivam movent, eueurbitulas temporibus et oecipitio admoveare, sanguinem ex naribus detrahere, resina subinde tempora pervellere, et imposito sinapi exuleerare ea, quæ male habent, ante linteolo subjeeto, ne vehementer arrodat, eandentibus ferramentis, ubi dolor est, uleera excitare, eibum permodieum eum aqua sumere : ubi levatus est dolor, in balneum ire, ibi multa aqua prius calida, deinde frigida per caput perfundi : si discussus ex toto dolor est, etiam ad vinum reverti ; sed postea semper, antequam quidquam aliud, aquam bibere.

Dissimile est id genus, quod humor rem in caput contrahit. In hoc tondere ad eutem necessarium est ; deinde imponere sinapi, sie, ut exuleeret : si id parum profuit, sealpello utendum est. Illa eum hydropieis communia sunt, ut exerceatur, insudet, vehementer perfrietur, eibis potionibusque utatur urinam præcipue moventibus.

2. Cirea faciem vero morbus innascitur, quem Græci κυνικὸν σπασμὸν nominant.

ORDO.

Illa sunt communia in omni vetusto dolore capit is : excitare sternutamenta, perfriare inferiores partes vehementer, gargarizare iis, quæ movent salivam, adinovere encurbitulas temporibus et oecipitio, detrahere sanguinem ex naribus, pervellere tempora subinde resina, et exulcerare ea sinapi imposito, quæ habent male, linteolo subiecto ante, ne arrodat vehementer, ubi est dolor, excitare uleera, caudentibus ferramentis, sumere modicium cibum cum aqua : ubi dolor est levatus, ire in balneum, ibi caput perfundi multa calida aqua prius, deinde frigida. Si dolor est discussus ex toto, etiam reverti ad vinum ; sed postea bibere aquam semper, antequam quidquam aliud.

Id genus est dissimile, quod contrahit humor in caput. In hoc est necessarium tondere ad eutem : dcinde imponere siuapi, sie ut exuleeret : si id profuit parum, est utendum sealpello. Illa sunt communia cum hydropeis, ut exerceatur, insudet, perfrietur vehementer, que precipue utatur eibis (que) potionibus moventibus urinam.

2. Veromoribus innascitur circa faciem, quem Græci nominant κυνικὸν σπασμὸν (cynicus spasmus).

TRANSLATION.

vinegar and water. The following are of universal application in all chronic pains of the head: to excite sneezing, to rub the lower extremities briskly, to gargle with those things which promote the saliva, to apply the enpping glasses to the temples and occiput, to extract blood from the nostrils (3), to velliate the temples occasionally with resin, and to blister those parts which have been affected, with sinapisms, first applying a bit of lint below, lest it should corrode violently; to ulcerate those parts where the pain is with hot irons; and to eat very moderately, and drink water: when the pain has been relieved, to go into a bath, there to have plenty of warm water poured over the head, then cold. If the pain be entirely removed, he may return to the use of wine; but afterwards, to drink water always, before any thing else.

That is a different species, in which there is a collection of fluid in the head. Here it is necessary to ent the hair close to the scalp: then sinapisms to be applied, in order to excite ulceration: if that appear to have done but little good, incisions should be made with a scalpel. The following remedies are of general application in dropsical cases, let the patient be exercised, that he may perspire, and to be rubbed forcibly, and to select that food and drink, best calculated to promote the urine.

2. There is a disease incident to the face, which the Greeks have named the

nant. Is eum acuta fere oritur; os eum motu quodam pervertitur; ideoque nihil aliud est, quam distentio oris. Aeeedit cerebra coloris in facie totoque corpore mutatio; somnus in promptu est. In hoc sanguinem mittere optimum est: si finitum eo malum non est, dueere alvum: si ne sie quidem diseussum est, albo veratro vomitum movere.

Præter hæc necessarium est vitare solem, lassitudinem, vinum. Si diseussum his non est, utendum est eursu; frictione in eo, quod læsum est, leni et multa; in reliquis partibus breviore, sed vehementi. Prodest etiam movere sternutamenta; caput radere; idque perfundere aqua ealida, vel marina, vel eerte salsa, sie, ut ei sulphur quoque adjieatur; post perfusionem iterum perfrieari; sinapi mandueare; eodemque tempore affectis oris partibus eeratum, integris idem sinapi, donee arrodat, imponere. Cibus aptissimus ex media materia est.

3. At si lingua resoluta est, quod interdum per se, interdum ex morbo aliquo fit, sie, ut sermo hominis non explictetur; oportet gargarizare ex aqua, in qua vel thymum, vel hyssopum, vel nepeta decocta sit; aquam bibere;

ORDO.

I soritur fere cum acuta febre. Os pervertitur cum quodam motu, que idco est utili aliud, quam distentio oris. Crebra mutatio coloris accedit in facie que toto corpore; somnus est in promptu. In hoc est optimum mittere sanguinem. Si malum non est finitum eo, ducere alvum: si ne quidem est discussum sic, movere vomitum albo veratro.

Præter hæc est necessarium vitare solem, lassitudinem, vi-
num. Si non est discussum his,
est utendum eursu; et leni (et)
multa frictione in eo, quod est
læsum; in reliquis partibus bre-
viore, sed vehementi. Etiam prodest movere sternutamenta;
radere caput; que perfundere ca-
lida, vel marina, vel certe salsa
aqua id, sic ut quoque sulphur
adjiciatur ci; post perfusionem
perfriicare iterum; manducare si-
napi; que eodem tempore impo-
neret ceratum affectis partibus
oris, item (imponere) sinapi in-
tegris (partibus), donec arrodat.
Aptissimus cibus est ex media
materia.

3. At si lingua est resoluta,
quod interdum fit per se, inter-
dum ex aliquo morbo, sic, ut ser-
mo hominis non explicetur; oportet
gargarizare ex aqua, in qua
vel thymum, vel hyssopum, vel
nepeta decocta; bibere aquam;

TRANSLATION.

cynic spasm. It is generally accompanied with an acute fever; the mouth being distorted by a certain morbid action; and on that account is nothing else than a convulsion of the mouth. A frequent change of colour takes place in the face and whole body, with a great propensity to sleep. The best remedy in this disease is to let blood: if the disease be not terminated by that, to give an injection; and if this also have failed to discuss the malady, to excite vomiting by white hellebore.

Besides all these, it is necessary to avoid the sun, lassitude, and wine. If the disease have resisted all these, running must be tried; with gentle and long continued friction on the part affected; but for a shorter space and more violent on the other parts. It is also beneficial to excite sneezing; to shave the head; and to pour either warm sea water over it, or at least sulphurated salt water; after this assuption he is to be rubbed again; to masticate mustard, at the same time to apply cerate to the affected parts, and mustard to the sound, until it blisters. The most proper food will be from the middle class.

3. But if the tongue be paralysed, so as to obstruct the pronunciation, which sometimes happens spontaneously, sometimes the effect of another disease, it will be necessary to gargle with a decoction of thyme, or of hyssop, or of cat-mint; to

caput, et os, et ea, quæ sub mento sunt, et cervieem vehementer perfrieare; lasure linguam ipsam linere; mandueare, quæ sunt acerrima, id est sinapi, allium, cepam; magna vi luctari, ut verba exprimantur; exereeri retento spiritu; caput sæpe aqua frigida perfundere; nonnumquam multam esse radieulam, deinde vomere.

4. Destillat autem humor de capite interdum in nares, quod leve est; interdum in fauces, quod pejus est; interdum etiam in pulmonem, quod pessimum est. Si in nares destillavit, tenuis per has pituita profluit, caput leviter dolet, gravitas ejus sentitur, frequentia sternutamenta sunt. Si in fauces, has exasperat, tussiculam movet. Si in pulmonem, præter sternutamenta, et tussim, est etiam capitis gravitas, lassitudo, sitis, aestus, biliosa urina.

Aliud autem, quamvis non multum distans, malum, gravedo est. Hæc nares elaudit, voeem obtundit, tussim sicciam movet: sub eadem salsa est saliva, sonant aures, venæ moventur in capite, turbida urina est. Hæc omnia *κορύξεις* Hippocrates nominat: nunc

ORDO.

perfricare caput, et os, et ea, quæ sunt sub mento, et cervicem vehementer; linere linguam ipsam lasere; mandueare, quæ sunt acerrima, id est sinapi, allium, cepam: luetari magna vi, ut verba exprimantur: exereeri spiritu retento, perfundere caput saepè frigida aqua; nonnumquam esse multam radieulam, deinde vomere.

4. Antem interdum humor de-stillat in nares de capite, quod est leve; interdum in fauces, quod est pejus; etiam interdum in pulmonem, quod est pessimum. Si destillavit in nares, tenuis pituita profluit per has, caput dolet leviter, gravitas ejus sentitur, sunt frequentia sternutamenta. Si (destillavit) in fauces, exasperat has, movet tussiculam. Si (destillavit) in pulmonem, præter sternutamenta et tussim, est etiam gravitas capitis, lassitudo, sitis, aestus, biliosa urina.

Autem gravedo est aliud malum quamvis non multum distans. Hæc elaudit nares, obtundit voeem, movet sicciam tussim: vero sub eadem saliva est salsa, aures sonant, venæ moventur in capite, urina est turbida. Hippocrates nominat

TRANSLATION.

drink water; to rub the head and face, and those parts which are under the chin and neck briskly; to besmear the tongue itself with assafœtida: to chew the most aerid things, such as mustard, garlick, onion; let his utmost efforts be exercised in expressing the words distinctly; during exercise to retain his breathing; cold affusion to be applied frequently to the head; sometimes to eat liberally of radishes, and then to vomit.

4. Sometimes there is a humour discharged from the head into the nose, which is only a slight inconvenience; sometimes into the fauces, which is worse; sometimes even into the lungs, which is the worst of all. If it have dropped down into the nostrils, a slight discharge takes place from them, a slight pain is felt in the head with a sensation of heaviness, and sneezings are frequent. If upon the fauces, it irritates them, and excites a slight cough. If into the lungs, besides the sneezings and cough, there is also a heaviness of the head, lassitude, thirst, heat, and bilious urine.

But a gravedo, although it does not differ much, is nevertheless another disease. This obstructs the nostrils, renders the voice obtuse, and excites a dry cough: at the same time the saliva is salt, there is a noise in the ears, the veins (*arteries*) of the head are excited, and the urine is turbid. Hippocrates named all these aflec-

video apud Graecos in gravedine hoc nomen servari; destillationem, καταστραγμὸν appellari.

Hæc autem et brevia, et si neglecta sunt, longa esse consuerunt. Nihil pestiferum est, nisi quod pulmonem exulceravit. Ubi aliquid ejusmodi sensimus, protinus abstinere a sole, balneo, vino, venere debemus: inter quæ unctione, et assueto cibo nihilominus uti licet. Ambulatione tantum acri, sed teeta utendum est, et post eam caput atque os supra quinquagies perfricandum. Raroque fit, ut si biduo, vel certe triduo nobis temperavimus, id vitium non levetur.

Quo levato, si in destillatione crassa facta pituita est, vel in gravedine nares magis patent, balneo utendum est, multaque aqua prius calida, post egelida, fomentum os, caputque; deinde cum cibo pleniore vinum bibendum. At si æque tenuis quarto die pituita est, vel nares æque clausæ videntur, assumendum est vinum Aminæum austерum; deinde rursus biduo aqua; post quæ ad balneum, et ad consuetudinem revertendum est.

Neque tamen illis ipsis diebus, quibus aliqua omittenda sunt, expedit

ORDO.

omnia hæc κορύζας (coryza): unue video hoc nomen servari in gravedine apud Graecos: destillationem, appellari καταστραγμὸν (catastagus).

Autem et hæc consuerunt esse brevia, et si sunt neglecta, longa. Nihil est pestiferum, nisi quod exulceravit pulmonem. Ubi sensimus aliquid ejusmodi, debemus protinus abstineri a sole, balneo, vino, venere: inter quæ nihilominus licet uti unctione, et assueto cibo. Est tantum utendum acri ambulatione, sed teeta, et post eam caput atque os (est) perfricandum supra quinquagies. Que raro fit, ut id vitium non levetur nobis, si temperavimus biduo, ve certe triduo.

Quo levato, si pituita est facta crassa in destillatione, vel nares magis patent, in gravedine, est utendum balneo, que os fomentum que caput, multa aqua prius calida, post egelida; deinde bibendum vinum cum pleniore cibo. At si pituita est æque tenuis quarto die, vel nares videantur æque clausæ, est assumendum Aminæum vinum, austерum; deinde aqua (est assumenda) rursus biduo, post quæ est revertendum ad balneum, et ad consuetudinem.

Neque tamen expedit agere tamquam ægros, illis diebus ipsis, quibus aliqua sunt omit-

TRANSLATION.

tions "CORYZÆ": I observe that this term is now applied by the Greeks to gravedo, and catarrhs are called them catastagi.

These are common affections, and generally of short duration, and if they be neglected, may continue long. None of them are dangerous, unless they produce ulceration of the lungs. Whenever we feel any thing of this kind we should immediately avoid the sun, the bath, wine, and venery: at the same time unction may be used, and the usual diet. The patient must be exercised by brisk walking, but under a cover, and after that the head and face to be rubbed at least fifty times. And it seldom happens, if we have restrained ourselves for two or three days at most, that the disease is not mitigated.

This relief being obtained, if in catarrh the rheum become thick, or in a gravedo, the nostrils are more free, the bath may be employed then, and the head and face freely fomented, first with warm water, afterwards with tepid; after which, wine may be given and a more liberal diet. But if the discharge be equally thin on the fourth day, or the nostrils appear no less obstructed, austere Aminaean(4) wine should be taken; afterwards water to be given for two days again; after which he may return to the bath, and his ordinary habits:

Neither is it expedient to confine the patient to the strict regimen of an invalid

tamquam ægros agere; sed cetera omnia quasi sanis facienda sunt, præterquam si diutius aliquem, et vehementius ista solicitare consuerunt: huic enim quedam curiosior observatio necessaria est. Igitur huic, si in nares vel in fances destillavit, præter ea, quæ supra retuli, protinus primis diebus multum ambulandum est; perfricandæ vehementer inferiores partes; levior frictio adhibenda thoraci erit; levior capiti; demenda assueto cibo pars dimidia; sumenda ova, amyrum, similiaque, quæ pituitam faciunt crassorem; siti contra, quanta maxima sustineri potest, pugnandum.

Ubi per hæc idoneus aliquis balneo factus, eoque usus est, adjiciendus est cibo piscieulus, aut caro; sie tamen, ne protinus justus modus cibi sumatur: vino meraco copiosius utendum est. At si in pulmonem quoque destillat, multo magis et ambulatione et frictione opus est; cademque exhibita ratione in cibis, si non satis illi proficiunt, acrioribus utendum est; magis somno indulgendum, abstinentiumque a negotiis omnibus; aliquando, sed serius, balnacum tentandum.

ORDO.

tenda; sed omnia cetera sunt facienda quasi sanis, præterquam si ista consueverunt sollicitare aliquem diutius, et vehementius: enim huic quedam curiosior observatio est necessaria. Igitur si destillavit in nares vel in fances, præter ea, quæ retuli supra, multum ambulandum est huic protinus primis diebus; inferiores partes perfricandæ vehementius; levior frictio erit adhibenda thoraci; levior capiti; dimidia pars demenda assueto cibo; ova, amyrum, que similia, quæ faciunt crassorem pituitam, sumenda; pugnandum (est) contrasiti, quanta maxima potest sustincri.

Ubi per hæc aliquis est factus idoneus balneo, que est usus eo, pisciculus est adjiciendus cibo, aut caro; sic tamen, ne sumatur protinus (quam) justus modus cibi: intendum est copiosius meraco vino. At si destillat in pulmone quoque, est opus multo magis et ambulatione, et frictione; que cadem ratione exhibita in cibis, si illi non proficiunt satis, utendum est acrioribus; indulgendum (est) magis somno, que abstinentium ab omnibus negotiis; aliquando, balnacum tentandum (est), sed serius.

TRANSLATION.

even on those days, on which some things are prohibited; but in every other respect, as if they were in ordinary health, except that person, who is more liable to be attacked longer and more severely by these complaints: for such, a more particular treatment will be requisite. Therefore, when the defluxion of humours have descended into the nostrils or fances, besides those things which I have stated above, the patient should walk much on the first days of his indisposition: to rub the inferior parts briskly, the friction must be more gentle on the chest, and gentler still on the head: his nasal diet must be diminished by one half: eggs, starch, and similar nutrients should be taken which generate a thicker phlegm; he must resist thirst to the utmost of his ability.

When a patient has been rendered a fit subject for the bath by these means, and has used it, a little fish may be added to his food, or even flesh, provided that he do not take his ordinary quantity at once: pure wine may be taken more liberally. But if the disease fall upon the lungs, there is a greater necessity for walking, and friction; and the same attention paid to the food; if these things have not the desired effect, he must use more powerful stimulants; to indulge more in sleep, and to abstain from all business; sometimes to try a bath, but at a later period.

In gravedine autem, primo die quiescere, neque esse, neque bibere, caput velare, fauces lana circumdare: postero die surgere, abstinere a potionē, aut, si res coegerit, non ultra heminam aquā assumere: tertio die panis non ita multum ex parte interiore cum pisciculo, vel levi carne sumere, aquam bibere: si quis sibi temperare non potuerit, quo minus pleniore victu utatur, vomere: ubi in balneum ventum est, multa calida aqua caput et os fovere usque ad sudorem: tum ad vinum redire. Post quae vix fieri potest, ut idem incommodum maneat: sed si manserit, utendum erit cibis frigidis, aridis, levibus, humore quam minimo, servatis frictionibus exercitationibusque, quae in omni tali genere valetudinis necessariæ sunt.

TRANSLATION.

But in a gravedo it will be necessary to enjoin rest on the first day, neither to eat nor drink, to cover the head, and to surround the throat with wool (*flannel*): on the following day to rise, and to refrain from drink, or, if the necessity of the ease be urgent, not to exceed a hemina (5) of water: on the third day to take a little of the erumb of bread, with a small fish, or light flesh, and to drink water: if a person cannot restrain himself from eating freely, he must vomit: when he is about to take a bath, let him foment his head and face with plenty of warm water until perspiration comes on: after this he may resume his wine. After which it rarely happens, that the same indisposition shall remain: but if it should, it will be necessary to give cold, dry, light food, with as little liquid as possible, the friction and exercise being still continued, which are necessary in every complaint of this nature.

ORDO.

Antem in gravedine (debet) quiescere prius die, neque esse, neque bibere, velare caput, circumdare fauces lana: postero die surgere, abstinere a potionē, aut, si res coegerit, non assūmere ultra heminam aquā: tertio die, non sumere ita multum panis, ex interiore parte, cum pisciculo, vel levi carne, bibere aquam: si quis non potuerit temperare sibi, quo utatur minus pleniore victu, vomere: ubi ventum est in balneum, fovere caput et os multa calida aqua usque ad sudorem: tum redire ad vinum. Post hæc vix potest fieri, ut idem incommodum maneat: sed si manserit, erit utendum cibis, frigidis, aridis, levibus, humore quam minimo, frictionibus que exercitationibus servatis, quae sunt necessariæ in omni genere valetudinis.

DISEASES OF THE NECK.

FROM the head we pass to the neck, which is subject to very severe diseases.

est. Neque tamen aliis importunior acutiorque morbus est, quam is, qui quodam rigore nervorum, modo caput seapulis, modo mentum pectori adnectit, modo reetam et immobilem cervicem intendit. Priorem Græei ὄπισθότονον, insequentem ἐμπροσθότονον, ultimum τέτανον appellant: quamvis minus subtiliter quidam indiserctis his nominibus utuntur. Ea saepe intra quartum diem tollunt; si hunc evaserunt, sine perieulo sunt.

Eadem omnia ratione curantur; idque eonvenit. Sed Aselepiades nique mittendum sanguinem eredit: quod quidam utique vitandum esse dixerunt, eo quod maxime tum corpus calore egeret; isque esset in sanguine. Verum hoc quidem falsum est. Neque enim natura sanguinis est, ut utique ealeat; sed ex iis, quæ in homine sunt, hic eelerrime vel ealescit, vel refrigerescit. Mitti vero nee ne debeat, ex iis intelligi potest, quæ de sanguinis missione præcepta sunt. Utique autem reete datur eastoreum, et eum hoc piper, vel laser: deinde opus est fomento humido et calido: itaque plerique aqua calida multa cervices subinde perfundunt. Id in

ORDO.

noxia gravibus morbis. Neque tamen est aliis morbus importunior que acutior, quam is, qui quodam rigore nervorum, modo annectit caput seapulis, modo mentem pectori, modo intendit cervicem rectam et immobilem. Græci appellant priorem ὄπισθότονον, (opisthotonus,) insequenter ἐμπροσθότονον, (emprosthotonus,) ultimum, τέτανον (tetanus): quamvis quidam minus subtiliter intinxerunt his nominibus indiserctis. Ea tollunt saepe intra quartum diem: si evaserunt hunc, sunt sine perieulo.

Omnia eurantur eadem ratione; que id eonvenit. Sed Aselepiades eredit sanguinem esse mittendum nique: quod quidam dixerunt esse vitandum utique, eo, quod corpus tum egeret calore maxime; que is esset in sanguine. Verum hoc est falsum quidem. Enim est neque natura sanguinis, ut caleat nique; sed ex iis quæ sunt in homine, hic vel calescit eelerrime, vel refrigerescit. Vero, (an) debeat mitti neene, potest intelligi ex iis, quæ sunt præcepta de missione sanguinis. Autem utique castoreum datur reete, et eum hoc piper, vel laser: deinde opus est humido et calido fomento: itaque plerique perfundunt cervices multa calida aqua subinde. Id levat in præ-

TRANSLATION.

Neither is there a more troublesome nor more acute disease than that, which by a certain rigor of the nerves, sometimes attatches the head to the shoulders, sometimes the elin to the breast, sometimes stretches the neck straight and immoveable. The Greeks have named the first opisthotonus, the second emprosthotonus, and the last tetanus: although some less skilfully apply these terms indiscriminately. These often carry off the patient within four days; if they get over that time there will be no danger.

All these forms are to be treated in the same way; and thus far they are unanimous. But Aselepiades considered blood-letting to be essentially necessary; whieli remedy is condemned by some, and above all others to be avoided, for this reason, that the body then stood mne in need of warmth, and this is contained in the blood. This indeed is false: for it is not the peculiar property of the blood to become hot: but this, above all other substances whieli compose the human frame, most rapidly grows either cold or hot. But whether it ought to be taken or not, may be learned from what I have already said on blood-letting. At all events eastor, either with pepper or assafœtida, may be given with propriety: then a moist and warm fomentation will be necessary: therefore most physicians pour plenty of warm water occasionally on the neck. That relieves for a time, but

praesentia levat; sed opportuniōres nervos frigori reddit: quod utique vitandum est.

Utilius igitur est, ecrato liquido primum eervicem perungere; deinde admovere vesicas bubulas vel utriculos oleo calido repletos, vel ex farina calidum eataplasma, vel piper rotundum cum fieu eontusum. Utilissimum tamen est, humido sale fovere: quod quomodo fieret, Jain ostendi. Ubi eorum aliquid factum est, admovere ad ignem, vel si aestas est, in sole ægrum oportet; maximeque oleo vetere; si id non est, Syriaeo; si ne id quidem est, adipe quam vetustissima eervicem et seapulas, et spinam perfrieare.

Frietio eum omnibus in homine vertebris utilis sit, tum iis præcipue, quæ in collo sunt. Ergo dic noeteque, interpositis tamen quibusdam temporibus, hoc remedio utendum est; dum intermittitur, imponendum malagma aliquod ex ealefacentibus. Cavendum vero præcipue frigus; ideoque in eo conelavi, quo eubabit æger, ignis continuus esse debebit, maximeque tempore antelueano, quo præcipue frigus intenditur.

Neque inutile erit, eaput attonsum habere, idque irino vel eyprino calido

ORDO.

sentia; sed reddit nervas opportuniōres frigori; quod est utique vitandum.

Igitur est utilius, primum perungere eervicem liquido cerato; deinde admovere vesicas bnbulas vel utriculos repletos calido oleo, vel calidum catalplasma ex farina, vel rotundum piper contnsum cum fieu. Tamen utilissimum est, fovere hñmido sale: quod ostendi jam, quomodo fieret. Ubi aliquid eorum est factum, oportet admovere ægrum ad ignem, vel si est aestas, in sole; que perfrieare eervicem et seapulas, et maxime spinam, vetere oleo; si id non est, Syriaeo; si id ne quidem est, quam vetustissima adipic.

Cum frictio sit utilis omnibus vertebribus in homine, tum præcipue iis, quæ sunt in collo. Ergo ntendum est hoc remedio nocteque die, tamen quibnsdam temporibus interpositis; dum intermitititur, aliquod malagma imponendum ex calefacientibus. Vero frigus cavendum præcipue: que ideo debet esse continuus ignis in eo conclavi in quo æger enbabit, que maxime tempore antelueano, quo frigus præcipue inteditnr.

Neque erit inutile, habere eaput attonsum, que id madefacere calido irino vel cyprino, et velare

TRANSLATION.

renders the nerves more susceptible of cold, which ought to be particularly avoided.

Therefore it is more proper to anoint the neck first with liquid cerate (6): then to apply ox bladders, or bottles filled with hot oil, or a warm meal poultice, or round pepper bruised with figs. Yet the most useful as a fomentation is moist salt: the modis operandi I have already shewn. When any of these means has been adopted, it behoves us to place the sick person near the fire, or if in summer, in the sun; and to rub the neck and shoulders, and especially the spine, with old oil; if that is not to be had, with Syrian; if not even this last be at hand, with the oldest fat.

Since friction may be usefully applied to all the vertebræ of the spine, it is particularly so to those which are in the neck. Therefore this remedy should be applied both by day and night; but with occasional intermissions; during which, some ealefacent malagma must be resorted to. Cold must be avoided above all things. On this account a fire must be kept constantly in the patient's bedchamber, and particularly about the break of day, at which time the cold is more intense.

Neither will it be improper to have the hair removed from the head, and to

madefacere, et superimposito pileo ve-
lare; nonnumquam etiam in calidum
oleum totum descendere, vel in aquam
calidam, in qua fœnum græcum deco-
ctum sit, et adjecta olei pars tertia. Al-
vus quoque ducta sæpe superiores partes
resolvit.

Si vero etiam vehementius dolor cre-
vit, admovendæ cervicibus cucurbitulæ
sunt, sic, ut cutis incidatur: eadem aut
ferramentis, aut sinapi adurenda. Ubi
levatus est dolor, moverique cervix cœ-
pit, scire licet, cedere remediis morbum.
Sed diu vitandus cibus, quisquis man-
dendus est. Sorbitionibus utendum,
itemque ovis sorbilibus, aut mollibus;
jus aliquod assumendum. Id si bene
processerit, jamque ex toto recte se ha-
bere cervices videbuntur, incipiendum
erit a pulticula, vel intrita bene ma-
dida. Celerius tamen etiam panis
mandendus, quam vinum gustandum:
siquidem hujus usus præcipue pericu-
losus; idoque in longius tempus differ-
endus est.

ORDO.

TRANSLATION.

moisten it with warm iris oil, or with that of cypress, and to cover it with a cap; also to descend at times entirely into a bath of warm oil, or in a warm decoction of fenugreek, to which one third part of oil has been added. The superior parts are often relieved by unloading the bowels.

Bnt if the pain have increased in violence, the cupping-glasses should be applied on the neck, the parts being previously incised: and the same part should be scorched either by the actual cautery or vesicated by sinapisms. When the pain has been relieved, and the neck bas begun to be moved, it is reasonable to conclude, that the disease is yielding to the remedies. But every kind of food requiring mastication must be avoided for a long time. Let him live on gruels, eggs, poached, or soft, and some broths may be taken. If this mode of treatment have proceeded favorably, and the neck shall appear to be entirely well, we must begin with panada, or very thin intrita. But bread may be masticated before the patient can venture on wine: for the use of this last, is highly dangerous, and on that account must be deferred for a longer time.

CHAP. IV.

THE DISEASES OF THE FAUCES: AND FIRST OF ANGINA.

1. As the disease last treated of is seen to occupy the entire neck, so there is another, equally pestiferous and acute, arises in the fances. Our countrymen call it angina (*quinsy*). Among the Greeks the name varies according to the species. For sometimes neither redness, nor tumour appears: but the body is arid, the breathing difficult, the limbs are relaxed: this they call synanche (8).

Sometimes the tongue is red and swollen, the voice is gone, the eyes are turned, the face is pale and there is hiccough: this is called cynanche. These symptoms are common to both: the patient is not able to swallow either food or drink; and his breathing is impeded. It takes a milder form, when there are only swelling and redness, the other symptoms being absent: this they call parasynanche.

Whatever species it may be, blood must be let, if the strength of the patient permit, even although it be not abundant: then we must relieve the bowels by enema. It is also proper to apply a cupping glass below the chin, and over the fances, in

fauces admovetur; ut id, quod strangu-
gulat, evocet. Opus est deinde fo-
mentis humidis: nam sicca spiritum
elidunt. Ergo admovere spongias oportet;
quae melius in calidum oleum,
quam in calidam aquam subinde demit-
tuntur: efficacissimusque est hic quo-
que, salis calidus succus. Tum com-
modum est, hyssopum, vel nepetam, vel
thymum, vel absinthium, vel etiam fur-
fures, aut ficus aridas, cum mulsa aqua
decoquere, eaque gargarizare: post haec
palatum ungere vel felle taurino, vel
eo medicamento, quod ex moris est.
Polline etiam piperis id recte resper-
gitur.

Si per haec parum proficitur, ultimum
est, incidere satis altis plagiis sub ipsis
maxillis supra collum, et in palato circa
uvam, vel eas venas, quae sub lingua
sunt; ut per ea vulnera morbus erum-
pat. Quibus si non fuerit æger adjutus,
scire licet, malo victum esse. Si vero
his morbus levatus est, jamque fauces
et cibum et spiritum capiunt, facilis ad
bonam valetudinem recursus est.

Atque interdum natura quoque ad-
juvat, si ex angustiore sede vitium tran-
sit in latiorem: itaque rubore et tumore

TRANSLATION.

order to extract the suffocating matter. Afterwards moist fomentations will be requisite; for dry ones oppress the breathing. Therefore sponges dipped occasionally in warm oil, rather than in hot water should be applied: and here too the warm juice of salt is most efficacious. Then we should gargle with a decoction of hyssop, or cat-mint, or thyme, or wormwood, or even bran, or dried figs in honey; after that to anoint the palate either with ox-gall, or with that medicine which is composed of mulberries. The pollen of pepper is very properly sprinkled on it.

If we have made but little progress by the foregoing means, the last remedy is to make free incisions under the inferior maxillary bones themselves, above the neck, and in the palate about the uvula, or in the sublingual veins; that the morbid humours may be thrown off by those wounds. From which, if the patient be not relieved, we may conclude that he is about to fall a victim to the disease. But if the disease be mitigated by these means and the fauces are capable of admitting both food and air, his recovery will be easy.

Sometimes nature also lends her aid, if the disease make a transit from a contracted to a more spacious situation: therefore a redness and swelling having

berari. Quidquid autem eas levarit, incipiendum est ab humidis, maximeque aqua mulsa decocta: deinde assumendi molles et non acres cibi sunt, donec fauces ad pristinum habitum revertantur.

Vulgo audio, si quis pullum hirundinis ederit, angina toto anno non periclitari; servatumque eum ex sale, cum is morbus urget, comburi, carbonemque ejus contritum in aquam mulsam, quæ potui datur, infriari, et prodesse. Id cum idoneos auctores ex populo habeat, neque habere quidquam periculi possit, quamvis in monumentis medicorum non legerim, tamen inserendum huic operi meo credidi.

2. Est etiam circa fauces malum, quod apud Græcos aliud aliudque nomen habet, prout se intendit. Omne in difficultate spirandi consistit: sed haec dum modica est, neque ex toto strangulat, *δύσπνοια* appellatur: cum vehementior est, ut spirare æger sine sono et anhelatione non possit, *ἀσθμα*: cum accessit id quoque, ne nisi recta cervice spiritus trahatur, *օρθόπνοια*.

ORDO.

berari. Autem quidquid levarit eas, est incipiendum ab humidis, que maxime decocta mulsa aqua: deinde molles et non acres cibi sunt assumendi, donec fauces revertantur ad pristinum habitum.

Audio vulgo, si quis ederit pullum hirundinis, angina non periclitari toto anno; que cum servatum ex sale, cum is morbus urget, comburi, que ejus carbonem infriari, et contritum in mulsum aquam, quæ datur potui, prodesse. Cum id habeat idoneos auctores ex populo, neque possit habere quidquam periculi, quamvis non legerim (*id*) in monumentis medicorum, tamen erediti inserendum huic meo operi.

2. Etiam est malum circa fauces, quod habet apud Græcos aliud que aliud nomen, prout intendit se. Omne consistit in difficultate spirandi; sed haec dum est modica, neque strangulat ex toto, appellatur *δύσπνοια* (*dyspnœa*): cum est vehementior, ut æger non possit spirare sine sono et anhelatione, (appellatur) *ἀσθμα* (*asthma*): quoque cum id (*asthma*) accessit, spiritus ne trahatur, nisi recta cervice, (appellatur) *օρθόπνοια* (*orthopnœa*).

TRANSLATION.

arisen in the praecordia, we may conclude that the fances are freed. But whatever has relieved them, the patient must begin with fluids, especially with boiled hydromel: then bland soft food, such as is not acrid, must be taken, until the fances return to their former habit.

I have heard it vulgarly reported, that if a person eat a young swallow, he will be in no danger of angina during a whole year; and that it is beneficial, if this young swallow be preserved in salt, burned, and the carbon reduced to powder and given in hydromel when the patient is labouring under angina. Now as this remedy seems to have creditable authority among the common people, and to be attended with no danger, although I have not read of it in the records of physicians, yet I consider it worthy of being inserted in my work.

2. There is also a disease about the fances, which has received different appellations among the Greeks according to its different degrees of violence. They all consist of a difficulty of breathing: but while this is moderate, and does not entirely suffocate, it is called dyspnœa: when it is more violent, so that the patient cannot respire without noise and panting, asthma: and when this difficulty has reached that degree, that respiration can only be performed in the erect position of the neck, orthopnœa.

Ex quibus id, quod primum est, potest diutius trahi; duo insequentia acuta esse consuerunt. His communia sunt: quod propter angustias, per quas spiritus evadit, sibilum edit, dolor in pectore præcordiisque est, interdum etiam in scapulis, isque modo deeedit, modo revertitur; ad hæc tussicula accedit.

Auxilium est, nisi aliquid prohibet, in sanguinis detractione. Neque id satis est, sed lacte quoque venter solvendus est. Liquanda alvus, interdum etiam dueenda; quibus extenuatum corpus incipit spiritum trahere commodius. Caput autem etiam in lecto sublime habendum est: thorax fomentis, cataplasmatisque calidis, aut siccis, aut etiam humidis adjuvandus est; et postea vel malagma superimponendum, vel certe ceratum ex cypriño, vel irino unguento. Sumenda deinde jejuno potui mulsa aqua, cum qua vel hyssopus cocta, vel contrita capparis radix sit.

Delingitur etiam utiliter, aut nitrum, aut nasturtium album frietum, deinde contritum et cum melle mistum: simulque coquuntur mel, galbanum, resina terebinthina, et ubi coierunt, ex his,

ORDO.

Ex quibus id, quod est primum, potest trahi diutius; duo insequentia consuerunt esse acuta. Communia (symptomata) his sunt: quod propter angustias, per quas spiritus evadit, edit sibilum, est dolor in pectore que præcordiis, interdum etiam in scapulis, que is modo deeedit, modo revertitur; ad hæc tussicula accedit.

Est auxilium, in detractione sanguinis, nisi aliquid prohibet. Neque est id satis, sed venter est quoque solvendus lacte. Albus (est) liquanda, interdum etiam dueenda; quibus extenuatum corpus incipit trahere spiritum commodius. Autem etiam caput est habendum sublimè in lecto: thorax est adjuvandus fomentis, que calidis cataplasmatis, aut siccis, aut etiam humidis; et postea vel malagma, vel certe ceratum ex cypriño, (est) superimponendum, vel unguento irino. Deinde mulsa aqua, cum qua vel hyssopus, vel contrita radix capparis sit cocta, est sumenda potui jejuno.

Etiam aut nitrum, aut album nasturtium frictum, deinde constitutum et mistum cum melle delingitur utiliter: que mel, galbanum, terebinthina resina coniunctur simul, et ubi coicerunt,

TRANSLATION.

Of these, the first may be protracted for a very long time: the two following are generally acute. The symptoms common to these are, that on account of the constriction of the respiratory passage, the breath is emitted with a sibilous noise, there is pain in the chest and præcordia, sometimes also in the shouolders, and that sometimes departs, sometimes returns; in addition to these a slight cough accedes.

Now blood-letting is the remedy in this, unless contra-indicated by any circumstance. Neither is that of itself sufficient, but the bowels must be relaxed also with milk. The lower intestines (9) should be purged even by injections sometimes; by which means the body being extennated, the patient begins to breathe more freely. But the head must be kept high in bed: the thorax shold be relieved by fomentations, and hot cataplasms, either dry or moist: afterwards a malagma is to be applied, or at least cypress cerate, or iris ointment. After this hydromel may be given fasting as a drink, in which hyssop, or the brnised root of capers has been boiled.

It is useful also to take either nitre, or white cresses fried, then brnised and mixed up with honey and given in the form of an electuary: also honey, galbanum, and turpentine resin are to be boiled together, and when they have coaleseed, as

quod fabæ magnitudinem habet, quotidie sub lingua liquatur: aut sulphuris ignem non experti p. \mathbb{X} . =. abrotoni p. \mathbb{X} . in vini cyatho teruntur, idque tepefactum sorbetur. Est etiam non vana opinio, vulpinum jecur, ubi siccum et aridum factum est, contundi oportere, polentamque ex eo potionis aspergi: vel ejusdem pulmonem quam recentissimum assum, sed sine ferro coctum, edendum esse.

Praeterea, sorbitonibus et lenibus cibis utendum est; interdum vino tenui austero; nonnumquam vomitu. Prosunt etiam, quæcumque urinam mouent: sed nihil magis, quam ambulatio lenta pene usque ad lassitudinem; frictio multa, præcipue inferiorum partium, vel in sole, vel ad ignem, et per seipsum, et per alios, usque ad sudorem.

3. In interiore vero faucium parte interdum exuleeratio esse consuevit. In hac plerique extrinseeus cataplasmatis calidis, fomentisque humidis utuntur: volunt etiam vaporem calidum ore recipi: per quæ moliores alii partes eas fieri dicunt, opportunioresque vitio jam hærenti. Sed, si bene vitari frigus potest, tuta illa præsidia; si metus ejus est, supervacua sunt. Utique

TRANSLATION.

much of this as the size of a bean may be dissolved under the tongue daily: or of impure sulphur p. \mathbb{X} . =: of southernwood p. \mathbb{X} . are triturated together in a glass of wine, and sipped warm. Neither is it an idle notion, that a fox's liver when dried and hardened, ought then to be reduced to powder, and sprinkled on the drink; or the lungs of the same animal as recent as possible to be eaten roasted, being cooked without the use of any iron utensil in the process.

Besides these, he should take gruels and mild food; sometimes light austere wine, sometimes a vomit. Also, every thing which promotes the urine, is beneficial; but nothing more so than gentle walking, almost to lassitude; much friction, especially of the lower extremities, either in the sun, or at the fire, both by the patient himself and by others, until he perspire.

3. Now it is not unusual for ulcerations to take place sometimes in the interior part of the fauces. In this case most physicians apply hot cataplasms, and moist fomentations externally: they also administer hot vapour into the mouth: others contend that the parts are rendered softer, and more susceptible of the disease already existing by these remedies. But if cold can be carefully avoided, these means are safe: if there be any apprehension of this, they are incompatible. To

autem perficieare fauces periculosum est: exuleerat enim. Neque utilia sunt, quae urinæ movendæ sunt; quia possunt, dum transeunt, ibi quoque pituitam extenuare, quam suppressi melius est.

Asclepiades multarum rerum, quas ipsi quoque secuti sumus, auctor bonus, acetum ait quam acerrimum esse sorbendum: hoc enim sine ulla noxa comprimi ulegra. Sed id suppressimere sanguinem potest, ulegra ipsa sanare non potest. Melius huic rei lycium est; quod idem quoque æque probat: vel porri, vel marrubii succus, vel nuces Græcæ cum tragæantho contritæ et cum passo mistæ, vel lini semen contritum et cum dulei vino mistum.

Exercitatio quoque ambulandi currendique necessaria est: frictio a pectori vehemens toti inferiori parti adhibenda. Cibi vero esse debent, neque nimium aeres, neque asperi; mel, lenticaula, tragum, lae, ptisana, pinguis earo, præcipueque porrum, et quidquid cum hoc mistum est.

Potionis^m quam minimum esse convenit. Aqua dari potest, vel pura, vel in qua malum cotoneum, palmulæve decoctæ sunt. Gargarizationes quoque lenes; sin hæ parum proficiunt, repræ-

rub the throat is certainly dangerous, for it ulcerates. Neither are diureties of any use, because, while they pass, they may attenuate the phlegm there, which had better be repressed.

Asclepiades, an excellent author of many things, in which we have also followed him, says that very strong vinegar should be sipped; for by this the ulcers are repressed without any injury; that the other may repress the flux of blood, but cannot heal the ulcers. To effect this, lycium(10) is a better application; which Asclepiades equally approves of: or the juice of leek, or of horehound, or sweet almonds tritinated with tragæanth and mixed with raisin wine, lint-seed bruised and mixed with sweet wine.

The exercise of walking and running is also necessary. Strong friction is to be applied from the chest downwards over all the lower parts. But the food ought to be neither too aerid, nor too sharp: honey, lentils, tragum, milk, ptisan, fat meat, and particularly leeks, and whatever composition they enter into.

The drink should be as sparing as possible. Water may be given, either pure, or boiled with pomegranates or dates. Also mild gargles: but if these avail little,

mentes utiles sunt. Hoc genus nequac acutum est, et potest esse non longum : curationem tamen maturam, ne velie- menter et diu laedat, desiderat.

TRANSLATION.

astringent ones will be nseful. Neither is the disease aente, and may not be of long duration; yet it reqnires early treatment, lest it become aggravated and tedious.

4. A eough, may be contracted in many different ways, and on account of the ulceration of the fanees, is generally a very troublesome concomitant. Therefore when their healthy action is restored, the cough itself ceases. Yet it is not unusual for a eough to exist sometimes without any primary disease; and when it becomes chronic, is removed with diffiulity. Sometimes it is dry, sometimes it excites an expectoration of phlegm.

It is requisite to drink hyssop every other day; to run, at the same time retaining the breath, but by no means, in the dust; to read aloud, which at first is impeded by the eough, but afterwards overcomes it; then to walk: after this to exercise the arms, and to rub the chest for a considerable time: after these things being done, he is to eat three ounces of the mellowest figs stewed over a clear fire.

Besides these, if the eough be moist, strong friction with some of the ealefacentis does good, and in this way the head should be rubbed briskly at the same time: also the eapping glasses to be applied to the chest; sinapisms to be placed on the fanees externally, as a rubefacient; the drink may be prepared from mint, sweet

busque Graecis et amylo; primoque assumptus panis aridus, deinde aliquis cibus lenis.

At si sicca tussis est, eum ea vehementissime urget, adjuvat vini austeri eyathus assumptus, dum ne amplius id, interposito tempore aliquo, quam ter aut quater fiat: item laseris quam optimi paulum devorare opus est; porri vel marrubii suicum assumere; sellam delingere; aeetum ex ea, vel certe aere sorbere, aut eum spiea allii contriti duos vini eyathos.

Utilis etiam in omni tussi est peregrinatio, navigatio longa, loea maritima, natationes: interdum lenis cibus, ut malva, urtica; interdum aecr, ut lae eum allio eoctum: sorbitones, quibus laser sit adjectum, aut in quibus porrumb incoetum tabuerit: ovum sorbile, sulphure adjecto: potui primum aqua calida, deinde invicem aliis diebus haec, aliis vinum.

almonds and starch; and beginning with dry bread at first, afterwards some mild food.

But if the cough be dry, and very violent, a glass of austere wine being taken assists; provided that be not done oftener than thrice or four times at proper intervals: it is also necessary to swallow a small quantity of the best assafætida; to take the juice of leeks, or of horehound; squills as an electuary; to sip the vinegar, or at least some acrid preparation of it, or two glasses of wine with a clove of bruised garlick.

Travelling also is beneficial in every kind of cough; long voyages, a maritime residence, and swimming: the food sometimes should be mild, as the mallow, or nettle; sometimes acrid, as milk boiled with garlick; broths, to which assafætida has been added, or in which leeks have been boiled away; a soft egg with sulphur added; warm water may be taken for drink at first, afterwards alternately, some days water, other days wine.

5. A person may be more alarmed, when he spits blood; but that is less or more dangerous. Sometimes it comes from the gums, sometimes from the mouth; and indeed from the latter very copiously at times, even without a cough, or ulcer, or

vitio; ita ut nihil exscreetur: verum ut ex naribus aliquando, sic ex ore prorumpit. Atque interdum sanguis proficit, interdum simile aquæ quiddam, in qua caro recens lota est. any other disease of the gums, so that nothing may be expectorated: but as it bursts out at times from the nose, so it does from the mouth. Sometimes pure blood is discharged, at other times it resembles water, in which fresh meat has been washed. Sometimes it is discharged from the upper part of the fauces, that being ulcerated; sometimes an ulcer does not exist, but the blood is poured out, either from the mouth of a vein being laid bare, or from some tubercles having arisen there.

When this is the case, neither drink nor food injures, nor is there any matter excreted, as from an ulcer. But an ulceration in the œsophagus or trachea, with frequent cough, gives origin to haemorrhage: sometimes it is not unusual to be sent from the lungs, or the breast(11), or the side, or the liver: females, who have a defective menstruation, often spit blood.

Medical authors say, that blood is lost either by the erosion, or rupture of any part, or the mouth of some vein being laid bare. They call the first diabrosis, the second rexis, the third anastomosis(12). The first is most dangerous: the last is least injurious. It often happens that pus follows a haemorrhage.

But sometimes, he who suppresses the haemorrhage itself, is sufficient to ensure a

nem profuit. Sed si secuta ulcera sunt, si pus, si tussis est, prout sedes ipsa est, ita varia et periculosa genera morborum sunt.

recovery. But if ulcers have followed, if there be pus, or cough, hence the diseases arising are both various and dangerous, from the nature of their situation.

If blood only be discharged, the remedy and the termination are more expeditious. Neither should we be ignorant that a moderate discharge of blood is not prejudicial to those who have habitual haemorrhages, or to those who have pains in the spine, or in the hips, or after violent running, or walking, provided there be no fever; and even that which is voided by the urine itself tends to relieve lassitude: and that it need not excite any alarm in a person who has fallen from some height, if no change have taken place in the urine: neither is a vomiting of blood to be considered dangerous, even when it returns, if the body have regained its strength and complement of blood in the interspace: and that there is not the least danger, when it occurs in a robust constitution, and is not excessive, nor excites a cough, nor heat.

These observations apply to all the species. Now I shall proceed with those parts which I have already mentioned. If the blood proceed from the gums, it is sufficient to chew purslane. If from the mouth, to retain pure wine in it; if that avail little, vinegar. If the haemorrhage should become violent during the applica-

test, commodissimum est, impetum ejus, admota occipitio encurbitula, sic, ut cutis quoque incidatur, avertire.

Si id mulieri, cui menstrua non feruntur, evenit, eamdem cucurbitulam, incisis inguinibus ejus, admoveare. At si ex faucibus, interioribusvc partibus processit, et metus major est, et cura major adhibenda. Sanguis mittendus est; et si nihilominus ex ore processit, iterum tertioque, et quotidie paulum aliquid: protinus autem debet sorbere vel acetum, vel cum thure plantaginis aut porri succum; imponendaque extrinsecus supra id, quod dolet, lana succida ex aceto est, et id spongia subinde refrigerandum.

Erasistratus horum crura quoque et femora brachiaque pluribus locis deligabat. Id Asclepiades, adeo non prodesse, etiam inimicum esse proposuit. Sed id saepe commode respondere experimenta testantur.

Neque tamen pluribus locis deligari necesse est: sed sat est infra inguina, et super talos, summosque humeros, etiam brachia. Tum, si febris urget,

tion of these remedies, and as it is possible to exhaust the patient, it would be most expedient to avert its impetus by the application of the enpping glasses and scarificator to the oeciput.

If that should occur to a female who does not menstruate, to apply the enpping glasses and scarificator to her groins. But if it have proceeded from the fances, or the internal parts, there is both greater apprehension, and more care required in the treatment. Blood must be abstracted; and if it still continue from the mouth, the operation must be repeated a second and a third time; and every day a little to be taken away: the patient ought to sip vinegar immediately, or the juice of plantain, or of leek with frankineense(13); and sordid wool moistened in vinegar is to be applied externally over the part affected, and that is to be cooled occasionally by a sponge.

Erasistratus also applied several ligatures on the legs, thighs, and arms of such patients. Aselepiades has affirmed that it is so far from being beneficial, he even condemned it as injurious. But experiments testify that it often succeeds very well.

Now there is no necessity for the application of ligatures in many places: but it is sufficient to put one on below each groin, and above the ancles, and at the upper part of the shoulders, and also on the fore arms. Then, if there be fever, gruel

danda est sorbitio, et potui aqua, in qua aliquid ex iis, quæ alvum adstrin-gunt, decoctum sit: at si abest febris, vel elota alica, vel panis ex aqua fri-gida, et molle quoque ovum dari po-test; potui, vel idem, quod supra scriptum est, vel vinum dulce, vel aqua frigida. Sed sic bibendum erit, ut sciamus, huic morbo sitim prodesse.

Præter hæc necessaria sunt quies, securitas, silentium. Caput hujus quoque cubantis sublime esse debet; recteque tondetur. Facies sæpe aqua frigida fovenda est. At inimica sunt vinum, balneum, venus, in cibo oleum, aeria omnia, item calida fomenta, con-clave calidum et inclusum, multa vesti-menta corpori injecta, etiam frictiones. Ubi bene sanguis conquirivit, tum vero incipiendum est a brachiis, erubibus-que; a thorace abstinentum. In hoc easu per hiemem, locis maritimis; per aestatem, mediterraneis opus est.

ORDO.

urget, sorbitio, et aqua in qua aliquid ex iis, quæ adstringunt alvum, sit decoctum, est danda potui: at si febris abest, vel elota alica, vel panis ex frigida aqua, et quoque molle ovum po-test dari; vel idem, quod est scriptum supra, vel dulce vinnm, vel frigida aqua, potui. TRANSLATION.

must be given, and water for drink, in which some of those astringents of the bowels have been boiled: but if there be no fever, either washed alica, or bread moistened in cold water, and also a soft egg may be given: the drink may be either such as I have mentioned above, or sweet wine, or cold water. But in the administration of drinks, we should bear in mind that thirst is beneficial in this disease.

Besides these means, repose, tranquillity of mind, and silence are all necessary. The patient's head also should be kept high in bed; and it is proper to cut the hair close. The face should be bathed frequently in cold water. But wine, the bath, venery, oil with the food, every thing acrid, also hot fomentations, a hot and close chamber, covering the body with much clothing, and also frictions are all inimical. When the haemorrhage has been entirely subdued, then, indeed friction may be tried on the arms and legs, but withheld from the chest. In this case the patient should select a maritime residence during the winter, and an inland retreat during the summer.

CHAP. V.

THE DISEASES OF THE STOMACH.

THE stomach is below the fauces; an organ which is subject to a variety of chronic diseases. For sometimes it is affected by great heat, sometimes by flatulency, again by inflammation, at another time by ulceration: sometimes phlegm, sometimes bile arises there: but the most frequent complaint is debility, or dyspepsia; neither is there any thing from which this viscous either suffers more in itself, or gives origin to other constitutional diseases.

Now as the maladies of this organ are so diversified, so are the remedies. When it is hot, it should be fomented externally with vinegar and rose oil occasionally; and the powder of —— (14) mixed with oil is to be laid on; and those cataplasms which at the same time both repress and soften. Cold water may be given for drink, unless that be contra-indicated by any circumstance.

If there be flatulency, the application of the dry cupping glasses does good; for there is no necessity to incise the skin: dry and hot fomentations, but not very strong, are beneficial. Abstinence must be interposed. The infusion of wormwood,

jejuno potio est absinthii, aut hyssopi, aut rutaæ. Exercitatio primo lenis, deinde major adhibenda est; maximeque, quæ superiores partes moveat: quod genus in omnibus stomachi vitiis aptissimum est.

Post exercitationem opus est unctione, frictione; balneo quoque nonnumquam, sed rarius; interdum alvi duetione; cibis deinde calidis, neque inflantibus; eodemque modo calidis potionibus, primo aquæ, post, ubi resedit inflatio, vini austeri. Illud quoque in omnibus stomaclii vitiis præcipiendum est, ut, quo modo se quisque æger refeerit, eo sanus utatur: nam reddit huius imbecillitas sua, nisi iisdem defenditur bona valetudo, quibus reddita est.

At si inflammatio aliqua est, quam fere tumor et dolor sequitur, prima sunt quies et abstinentia, lana sulphurata circumdata, in jejuno absinthium. Si ardor stomaclum urget, aeoto eum rosa subinde fovendus est: deinde eibis quidem utendum est modieis; imponenda vero extrinsecus quæ simul et reprimunt et emolliunt: postea deinde, his detractis, utendum calidis ex farina ea-

TRANSLATION.

or of hyssop or of rue taken fasting is useful. Exercise must be employed, at first gentle, and afterwards to be augmented; and especially that which may bring the superior extremities into action; which kind is best adapted for all diseases of the stomach.

Exercise should be followed by nction and friction; and sometimes, though rarely, a bath; sometimes an injection; afterwards warm food, such as may not produce flatulency; and to proceed in the same manner with warm drinks, first of water, then when the flatus has been subdued, of austere wine. This maxim must be observed in all diseases of the stomach, that by whatever means a patient has recovered, he should adhere to the same plan when he is well: for this debility will return on him unless the health be guarded by the same means, by which it has been restored.

But if there be any inflammation, which is generally followed by swelling and pain, the first remedies should be rest and abstinence; sulphurated wool being applied around it and taking wormwood fasting. If there be oppressive heat in the stomach, let it be fomented occasionally with vinegar and rose oil: then food is to be given in moderation; and the external remedies must be such as repress and soften at the same time: afterwards these being withdrawn, warm cataplasms of flour

taplasmatis, quæ reliquias digerant : interdum alvus ducenda : adhibenda exercitatio, et cibus plenior.

At si exulceratio stomachum infestat, eadem fere facienda sunt, quæ in faucibus exulceratis præcepta sunt. Exercitatio, frictio inferiorum partium adhibenda ; adhibendi lenes et glutinosi cibi, sed citra satiatem ; omnia acria atque acida removenda ; vino, si febris non est, dulci, aut, si id inflat, certe leni utendum ; sed neque perfrigido, neque nimis calido.

Si vero pituita stomachus impletur, necessarius modo in jejuno, modo post cibum vomitus est : utilis exercitatio, gestatio, navigatio, frictio : nihil edendum, bibendumque, nisi calidum ; vitatis tantum iis, quæ pituitam contrahere consuerunt.

Molestius est, si stomachus bile vitirosus est. Solent autem ii, qui sic tentantur, interpositis quibusdam diebus, hanc, et quidem, quod pessimum est, atram vomere. His recte alvus ducitur : potiones ex absinthio dantur : necessaria gestatio, navigatio est ; si fieri potest, ex nausea vomitus : vitanda

ORDO.

dum calidis eatplasmatis ex farina, quæ digerant reliquias : interdum alvus (est) ducenda : exercitatio et plenior cibus (est) adhibenda.

At si exulceratio infestat stomachum, eadem sunt fere facienda, quæ sunt præcepta in exulceratis faueibus. Exercitatio, frictio inferiorum partium adhibenda ; lenes et glutinosi cibi (sunt) adhibendi, sed citra satiatem ; omnia acria atque acida (sunt) removenda ; si non est febris, est utendum dulci vino, aut, si id inflat, certe leni ; sed neque perfrigido, neque nimis calido.

TRANSLATION.

must be used, which may disperse the remains : sometimes the bowels are to be relieved by injections : exercise must be employed, and a fuller diet.

But if ulceration attack the stomach, almost a similar treatment must be pursued as have been prescribed in ulcerated fauces. Exercise and friction of the lower parts must be used : mild and glutinous food should be given, but not to satiety ; all acrid and acid things are to be withheld ; sweet wine may be allowed, if there be no fever, or if that inflate, let him take at least a milder wine ; but neither of these should be too cold nor too hot.

If the stomach be recharged with phlegm, a vomit is necessary, sometimes fasting, sometimes after food : exercise, gestation, sailing, and friction do good : nothing is to be eaten or drunk, except what is warm ; those things only to be avoided which usually generate phlegm.

The disease is more troublesome, when the stomach becomes vitiated with bile. But those who are affected in this manner, usually eject this, after an interval of some days, and indeed sometimes black bile is vomited, which is the worst of all. In these cases injections are proper : infusion of wormwood given for drink : gestation and sailing are necessary : and if possible to excite vomiting by sea-sickness :

cruditas: sumeudi cibi faciles et stomacho non alieni, vinum austерum.

TRANSLATION.

indigestion must be avoided, and such foods are to be taken which are easy of digestion, and not improper for the stomach, with austere wine.

But the most common and the worst disorder of the stomach is relaxation, that is, when it is not capable of retaining the food, by which means the body is deprived of nourishment, consequently it is wasted by consumption. In this case the bath is very injurious; reading, and exercises of the superior extremities are necessary; also unctions and frictions. It is also salutary to drench those patients with cold water all over the body, and to swim in it, to subject the stomach itself to sprouts of the same, and more particularly that part below the shoulders opposite this organ; to stand for some time in cold and medicinal springs, such as those of Cutilia and Sumbrina (15).

The food now should be taken cold, and that which is more difficult of digestion, rather than what is easily decomposed. Therefore, most persons, who are able to digest nothing else, can digest beef. From this we may learn, that neither birds, nor game, nor fish, ought to be given, except of the harder kinds. Cold wine indeed is fittest for drink, or at least a very warm pure wine, particularly the Rhetic or Allobrogic (16), or any other if it be austere, and seasoned with

resina conditum est; si id non est, quam asperimum, maximeque Signum.

Si cibus non continetur, danda aqua, et eliciendus plenior vomitus est, iterumque dandus cibus; et tum admovendae duobus infra stomachum digitis cucurbitulae, ibique duabus aut tribus horis continendae sunt. Si simul et vomitus, et dolor est, imponenda supra stomachum est lana succida, vel spongia ex aceto, vel cataplasma, quod refrigeret: perficanda vero non diu, sed vehementer brachia et crura, et calefacienda.

Si plus doloris est, infra præcordia quatuor digitis cucurbitula utendum est; et protinus dandus panis ex posca frigida: si non continuuit, post vomitum leve aliquid ex iis, quæ non aliena stomacho sint: si ne id quidem tenuit, singuli cyathi vini, singulis interpositis horis, donec stomachus consistat. Valens etiam medicamentum est, radiculæ succus: valentius, acidi Punici mali, cum pari modo succi, qui ex dulci Punico malo est, adjecto etiam intubis succo, et menthæ, sed hujus minima parte; quibus tantumdem, quantum in

TRANSLATION.

resin; if that is not to be had, the roughest possible, and especially the Signum (17).

If the food be not retained on the stomach, water must be given and a copious vomiting is to be elicited, and food is to be given again; and then the cupping glasses are to be applied two fingers' breadth below the stomach, and retained there for two or three hours. If there be vomiting and pain at the same time, sordid wool should be laid over the stomach, or a sponge dipped in vinegar, or a refrigerant cataplasm: the arms and legs must be warmed and rubbed actively, but not too long.

If the pain be more severe, the cupping glasses must be applied four fingers' breadth below the præcordia, then bread sopped in cold posca to be given immediately: if that be not retained, after the vomiting, give some of those things which are light, at the same time grateful to the stomach: if even that have not remained, let one glass of wine be given every hour, until the stomach retain the food. The juice of radishes is also a powerful medicine; but a more powerful still is the juice of the acid pomegranate, with an equal quantity of the sweet being added to that of endive and mint, but of the latter the smallest portion,

his omnibus est, aquæ frigidæ quam optime miseetur. Id enim plus quam vinum ad eomprimendum stomachum potest.

Supprimendus autem vomitus est, qui per se venit, etsi nausea est. Sed si eoaeuit intus cibus, aut computruit, quorum utrumlibet ruetus ostendit, ejiciendus est; protinusque, cibis assump-tis iisdem, quos proxime posui, stomachus restituendus. Ubi sublatus est præsens metus, ad ea redeundum est, quæ supra præepta sunt.

ORDO.
frigidæ aquæ miscetur quam optime. Enim id potest ad eomprimendum stomachum plus quam vinum.

Autem vomitus qui venit perse, etsi est nausea est supprimendus. Sed si cibis eoaeuit intus, aut computruit, ructus ostendit utrumlibet quorum, est ejiciendus; que protinus, iisdem cibus assump-tis, quos posui proxime, stomachus (est) restituendus. Ubi præsens metus est sublatus, est redeundum ad ea, quæ sunt præepta supra.

TRANSLATION.

with which as much cold water, as all these juices put together, and well mixed. For that is more effectual in trauillizing the stomach than wine.

But spontaneous vomiting is to be suppressed, although there be nausea: or, if the ingesta have become acid, or vitiated within the stomach, either of which is indicated by the eructations, it is to be ejected; and immediately the same kind of food is to be administered for the restoration of the stomach, which I have just now mentioned. When we have removed the present danger, the patient may be put upon that regimen which has been prescribed above.

CAP. VI.

DE LATERUM DOLORIBUS.

STOMACHUS lateribus eingitur; atque in his quoque vehementes dolores esse consuerunt. Et initium vel ex frigore, vel ex ietu, vel ex nimio cursu, vel ex morbo est: sed interdum id malum intra dolorem est, isque modo tarde, modo eeleriter solvit; interdum ad pernieiem quoque proeedit, oriturque acutus morbus, qui *πλευριτικός* a Græcis nominatur.

TRANSLATION.

CHAP. VI.

OF PLEURITIS.

THE stomach is bounded by the sides; and these are subject to violent pains also. The first cause may be either from cold, or from a blow, or from excessive running, or from disease: but the complaint sometimes consists only of a pain, and that is sometimes removed slowly, sometimes rapidly; sometimes it terminates fatally, giving origin to an acute disease, named by the Greeks pleuritis.

Huie dolori lateris, febris et tussis acedit: et per hanc exsereatur, si tolerabilis morbus est, pituita; si gravis, sanguis. Interdum etiam siccata tussis est, quae nihil emolitur: idque primo vitio gravius, secundo tolerabilius est.

Remedium vero est magni et recentis doloris, sanguis missus. At, sive levior, sive vetustior easus est, vel supervacuum, vel serum id auxilium est; eonfigiendumque ad eucurbitulas est, ante summa eute incisa. Recte etiam sinapi ex aeeto super peetus imponitur, donec uleera pustulasque excitet; et tum medicamentum, quod humorem illue citet.

Præter haec, circumdare primum oportet latus hapso lanæ sulphuratae: deinde, eum paulum inflammatio se remisit, siccis et calidis fomentis uti. Ab his transitus ad malagmata est.

Si vetustior dolor remanet, novissime resina imposita discutitur. Utendum eibis potionibusque calidis; vitandum frigus: inter haec tamen non alienum est extremas partes oleo et sulphure perficare. Si levata tussis est, leni lectione uti; jamque et acres eibos, et vinum meraeius assumere. Quæ a me-

ORDO.

Febris, et tussis accedit huic dolori lateris: et pituita exscreatur per hanc, si morbus est tolerabilius; si gravis, sanguis. Interdum etiam est siccata tussis, quæ emolitur nihil: que id est gravius primo vitio, secundo tolerabilius.

Vero remedium magni et recentis doloris est, sanguis missus. At, sive casus est levior, sive vetustior, id auxilium est vel supervacuum, vel serum; que est configendum ad eucurbitulas, summa eute incisa ante. Etiam sinapi ex aeeto imponitur recte super peetus, donec excitet uleera que pustulas; et tum medicamentum, quod eitet humorum illuc.

Præter haec, prius oportet circumdare latus hapso sulphuratae lanæ: deinde, eum inflammatio remisit se paulum, uti siccis et calidis fomentis. Ab his transitus est malagmata.

Si dolor remanet vetustior, novissime dissentitur resina imposta. (Est) utendum calidis cibis que potionibus; frigus (est) vitandum: tamen inter haec non est alienum perficare extremas partes oleo et sulphure. Si tussis est levata, uti leui lectione; que jam assumere et acres eibos, et meracins vinum. Quæ a me-

TRANSLATION.

To this pain of the side supervene fever and cough; and by this latter, phlegm is expectorated, if the disease be not violent; if severe, blood is discharged. At times there is a dry cough, which expectorates nothing; and this is worse than the first malady, but more supportable than the second.

Now the remedy for a violent and recent pain is blood-letting. But whether the case be very slight, or chronic, that remedy is either superfluous, or too late; and in this case we must apply the cupping glasses with the searifieator. Also sinapisms prepared with vinegar may be advantageously applied on the chest, until vesicles and pustules be excited; and then a medicament which may extract the humour thither.

Besides these, the side should be surrounded first with a band of sulphurated wool; and when the inflammation has subsided a little, to use dry and warm fomentations. After these we must proceed with malgmata.

If the pain become inveterate it is to be discussed at last by the application of resin. Warm food and drink must be given; and cold avoided: at the same time it might be beneficial to rub the extremities with sulphureted oil. If the cough be relieved, the patient may read softly, and then take both aerid food, and stronger wine. These things then are prescribed by physicians; yet without

dicis præcipiuntur, ut tamen sine his rusticos nostros epota ex aqua hierba trixago satis adjuvet.

Hæc in omni lateris dolore communia sunt: plus negotii est, si acutus quoque morbus is factus est. In hoc, præter ea, quæ supra posita sunt, hæc animadvertenda sunt: ut cibus sit quam maxime tenuis et lenis, præcipueque sorbitio, eaque ex ptisana potissimum, aut jus in quo porrus eum pullo gallinaceo coctus sit; idque non nisi tertio quoque die detur, si tamen per vires lieebit: potui vero aqua mulsa, in qua hyssopum, aut ruta decocta sit.

Quæ quibus temporibus danda sint, ex ratione vel adauctæ; vel levatae febris apparebit, sic, ut in remissione quam maxima dentur: cum eo tamen, ut sciamus, non esse ejus generis tussi aridas fauces committendas: saepe enim, ubi nihil est, quod exscreetur, continuatur, et strangulat. Ob quam causam dixi etiam pejus id genus esse tussis, quod nihil, quam quod pituitam moveret.

Sed hic vinum sorbere, ut supra præcepimus, morbus ipse non patitur: in

ORDO.

præcipiuntur a medicis, ut tamen sine his herba trixago epota ex aqua adjavet nostros rusticos satis.

Hæc sunt communia in omni dolore lateris: est plus negotii, si quoque is morbus est factus acutus. In hoc, præter ea, quæ sunt posita supra, hæc sunt animadvertenda: ut cibus sit quam maxime tenuis, et lenis, que præcipue sorbitio, que potissimum ea ex ptisana, aut jus in quo porrus sit coctus cum pullo gallinaceo; que id quoque non detur nisi tertio die: si tamen lieebit per vires: vero potui mulsa aqua, in qua hyssopum, aut ruta sit decocta.

Quibus temporibus quæ sint danda, apparebit ex ratione vel adauctæ; vel levatae febris, sic, ut dentur quam maxima in remissione: tamen cum eo, ut sciamus, fanees non esse committendas aridas tussi ejus generis: enim saepe, ubi est nihil, quod exscreetur, continuatur, et strangulat. Ob quam causam, etiam dixi id genus tussis quod moveret nihil, esse pejus, quam quod (moveret) pituitam.

Sed hic, morbus ipse non patitur sorbere vinum, ut præcepimus supra: in vicem ejus, ere-

TRANSLATION.

these, the watery infusion of the herb germander being drunk seems to be a satisfactory remedy for our peasants.

These (*following*) rules are applicable in every species of plenilis: there will be a greater difficulty, if the disease have assumed an acute character. In this latter case, besides those rules which have been given above, these must be observed: that the food should be as thin and mild as possible, particularly gruel, and more especially that which is prepared of ptisan, or leeks boiled in chicken-broth; and that is not to be allowed oftener than every third day, and even then, it must be regulated by the patient's strength: but for drink a decoction of hyssop or rue in hydromel.

The times in whieh these remedies are to be administered, will be apparent by a vigilant attention to the progressing, or regressing stage of the fever, so that they may be given in the greatest possible remission: yet on this condition, that we bear in mind that the fauces must not be allowed to become dry in a cough of this kind: for very often, when there is nothing expectorated, it is continued, and has a tendency to suffocate. For this reason I said that a cough, which brings up nothing, is worse than that which expectorates phlegm.

But in this case the disease itself forbids wine to be given, as we have mentioned

vicem ejus, tremor ptisanæ sumendus est. Ut his autem in ipso morbi fervore sustinendus æger est, sic, ubi paullum is se remisit, alimenta pleniora, et vini quoque aliquid dari potest; dum nihil detur, quod aut refrigeret corpus, aut fauces asperet.

Si in refectione quoque manserit tussis, intermittere oportebit uno die; posteroque, cum cibo vini paulo plus assumere. Atque incipiente quoque tussi, tum non erit alienum, ut supra quoque positum est, vini cyathos sorbere: sed in hoc genere valetudinis, dulce, vel certe lene commodius est. Si malum inveteravit, athletico victu corpus firmandum est.

ORDO.

mor ptisanæ est sumendus. Antem ut æger est sustinendus in fervore ipso morbi, sic, ubi is remisit se paullum, pleniora alimenta, et quoque aliquid vini potest dari; dum nihil detur, quod aut refrigeret corpus, aut asperet fauces.

Si tussis quoque manserit in refectione, oportebit intermittere uno die; que postero (die), assumere paulo plus vini eum cibo. Atque, tussi incipiente, tum non erit alienum, sorbere eyathos vini, ut quoque est positum supra: sed in hoc genere valetudinis, dulce (vinum), vel certe lene est commodius. Si malum inveteraverit, corpus est firmando athletico victu.

TRANSLATION.

above: instead of it the cream of ptisan is to be taken. But as the patient is to be supported by these things in the violence of the disease itself, so, when it has remitted a little, a fuller diet, and also some wine may be given; but nothing should be given, that would either refrigerate the body or exasperate the fauces.

If the eough continue during convalescence also, it will be expedient to intermit for one day; and on the following to take wine and food more freely: and in the incipient stage of cough, it will not be improper to sip wine by glasses, in the manner above directed: but in a malady of this kind, sweet, or at least a mild wine is more advantageous. If it have become chronic, the body must be strengthened by athletic diet.

DE MORBIS VISCIERUM; ET PRIMO, DE PULMONE.

EST transenndum a compagine corporis ad viscera; et in primis (est) veniendum ad pulmonem; ex quo vehemens et acutus morbus oritur, quem Graeci vocant

TRANSLATION.

CHAP. VII.

OF THE DISEASES OF THE VISCERA, AND IN THE FIRST PLACE OF THE LUNGS.

FROM the structure of the body we must proceed to the viscera, and first of all to the lungs; in which a violent and acute disease takes place, which the Greeks

μονικὸν Græci vocant. Ejus haec conditio est : pulmo totus afficitur : hinc easum ejus subsequitur tussis, bilem vel pus trahens, præcordiorum totiusque pectoris gravitas, spiritus difficultas, magnæ febres, continua vigilia, eibi fastidium, tabes. Id genus morbi plus periculi quam doloris habet.

Oportet, si satis validæ vires sunt, sanguinem mittere : sin minores, encubitalas sine ferro præcordiis admovere. Tum, si satis valet, gestando ægrum, digerere : si parum, intra dominum tamen dimovere. Potionem autem hyssopi dare, cum quo fieus arida sit incoeta ; aut aquam mulsam, in qua vel hyssopum vel ruta decocta sit : frictione uti diutissime in seapulis, proxime ab his in braehiis et pedibus et erubibus, leniter contra pulmonem ; idque bis quotidie facere.

Quod ad cibum vero pertinet, huic nee salsis opus est, neque aeribus, neque amaris, neque alvum astringentibus, sed paulo lenioribus. Ergo primis diebus danda est sorbitio ptisanæ, vel aliae, vel oryzæ, cum qua reeens adeps coeta sit : eum lae, sorbile ovum, nuclei pinei ex melle, panis vel elota alia ex aqua mulsa : potui deinde non solum

ORDO.

περιπνευμονία (peripneumonia). Haec est conditio ejus : totus pulmo afficitur : tussis subsequitur hinc easum ejus, trahiens bilem vel pus, gravitas præcordiorum que totius pectoris, difficultas spiritus, magnæ febres, continua vigilia, fastidium cibi, tabes. Id genus morbi habet plus periculi quam doloris.

Oportet, mittere sanguinem, si vires sunt satis validæ : sin minores, admovere encubitalas sine ferro præcordiis. Tum, si valet satis, ægrum digerere gestando : si (valet) parum, tamen dimovere intra dominum. Autem dare potionem hyssopi, cum quo arida ficus sit incoeta ; aut mulsam aquam, in qua vel hyssopum vel ruta sit decocta : uti frictione diutissime in scapulis, proxime ab his in braehiis et pedibus et erubibus, leniter contra pulmonem ; que facere id bis quotidie.

Vero quod pertinet ad cibum, est opus nec salsis huic, neque aceribus, neque amaris, neque astringentibus alvum, sed paulo lenioribus. Ergo sorbitio ptisana, vel alicæ, vel oryzæ, cum qua recens adeps sit decocta, est danda primis diebus : cum hac, sorbile ovum, pinei nuclei ex melle, panis vel elota alia ex mulsa aqua : deinde non solum

TRANSLATION.

call peripneumonia. The nature of the disease is this : the whole structure of the lungs is affected : cough follows this, (*as cause and effect,*) bringing up bile, or pus ; a weight of the præcordia and of the whole chest, difficulty of breathing, high fever, constant watching, fastidious appetite and consumption. This disease is more dangerous than painful.

It will be proper to let blood, if the strength of the patient admit of it : but if that be deficient, to apply the cupping glasses without incision to the præcordia. Then, if the patient go on improving satisfactorily, to discuss it by gestation : if otherwise, to move him about in the house. To give a decoction of hyssop and dry figs as drink ; or hydromel, in which either hyssop or rue has been boiled : to apply friction for a considerable time about the shoulders, next after these on the arms, feet, legs, and gently over the lungs ; and to do that twice daily.

But with respect to food, he should neither have salt, nor acid, neither bitter, nor astringent things, but those of a milder nature. Therefore at the beginning gruel of ptisan should be given, or of alia, or rice boiled with fresh fat : with this a soft or poached egg, pine nuts with honey, bread or washed alia with hydromel ;

pura aqua, sed etiam mulsa egelida, aut, si aestas est, etiam frigida; nisi quid obstat.

Hæc autem altero quoque die, incremente morbo, dare satis est: ubi in incremento constitut, quantum res patitur, ab omnibus abstinentum est, præterquam aqua egelida. Si vires desunt, adjuvandæ sunt aqua mulsa. Prosuntque adversus dolores imposita calida fomenta, vel ea, quæ simul et reprimunt et emolliunt: prodest impositus super peetus sal bene contritus, cum cerato mistus; quia leviter cutem erodit, eoque impetum materiae, quo pulmo vexatur, evocat. Utile etiam aliquod malagma est ex iis, quæ materiam trahunt.

Neque alienum est, dum premit morbus, clausis fenestris ægrum continere: ubi paulum levatus est, ter aut quater die, fenestræ aliquantum apertis, parvum aërem recipere. Deinde in refectione pluribus diebus a vino abstinere; gestatione, frictione uti; sorbitionibus et prioribus eibis adjicere, ex oleribus porrumb, ex carne ungulas et summa truncorum atque pisieulos, sic, ut diu nihil nisi molle et lene sumatur.

ORDO.

pura aqua potui, sed etiam egelida mulsa, aut, si est aestas, etiam frigida; nisi quid obstat.

. Autem, morbo inerescente, est satis dare haec quoque altero die: ubi constitut in incremento, est abstinentiam ab omnibus, quantum res patitur, præterquam egelida aqua. Si vires desunt, sunt adjuvandæ mulsa aqua. Qne calida fomenta imposita prosunt adversus dolores, vel ea, quæ simul et reprimunt et emolliunt: bene contritus sal impositus supra peetus, prodest, mistus enmicerato; quia erodit extem leviter, que evocat impetum materiae eo, quo pulmo vexatur. Etiam aliquod malagma ex iis, quæ trahunt materiam, est utile.

Neque est alienum, continere ægrum clausis fenestræ, dum morbus premit: ubi est levatus paulum, (debet) recipere parvum aërem, ter aut quater die, fenestræ aliquantum apertis. Deinde in refectione (debet) abstinere a vino pluribus diebus; nti gestatione, frictione; adjicere prioribus sorbitionibus et eibis, ex oleribus porrumb, ex carne ungulas et summa truncorum atque pisieulos, sic, ut nihil nisi molle et lene sumatur diu.

TRANSLATION.

then for drink, not only pure water, but lukewarm hydromel, or if it be summer, even cold, unless there be any circumstance which may forbid that.

But it will be sufficient to give these things every alternate day, when the disease is increasing; but when it is at the height, the patient must abstain as rigidly as the ease will allow from every thing except lukewarm water. If the strength fail, it should be assisted with hydromel. Hot fomentations being applied relieve the pains, or those which at the same time repress and mollify: salt well triturated with cerate, being laid on the chest does good; because it corrodes the skin slightly, and by this excites a revulsion of the matter, by which the lungs are oppressed. Also some malagmas composed of those articles which have a tendency to draw out the matter, are useful.

Neither is it improper to keep the patient's chamber windows shut during the severity of the disease: but when he has been relieved a little, to admit a small portion of air, three or four times a day, by opening the windows a little. Then during his convalescence to abstain from wine for several days; to employ gestation and friction; to augment the gruels and former food, from the pot-herbs with leeks, and of animal substances, the heels and pettitoes, and small fish, so that nothing except what is soft and mild may be taken for a long time.

CAP. VIII.

DE HEPATICIS.

ALTERIUS quoque visceris morbus, id est jocinoris, æque modo longus, modo acutus esse consuevit: ἡπατικὸν Græci vocant.

Dextra parte sub præcordiis vehemens dolor est; idemque ad latus dextrum, et ad jugulum, humerumque partis ejusdem pervenit: nonnumquam manus quoque dextra torquetur: horror validus est: ubi male est, bilis evomitur: interdum singultus prope strangulat. Et hæc quidem acuti morbi sunt.

Longioris vero, ubi suppuration in jocinore est; dolorque modo finitur, modo intenditur; dextra parte præcordia dura sunt, et tument; post eibum major spiritus difficultas est; accedit maxillarum quædam resolutio. Ubi inveteravit malum, venter et erura pedesque intumescunt; pectus atque humeri, circaque jugulum utrumque extenuatur.

ORDO.

CAP. VIII.

DE HEPATICIS.

QUOQUE (est) morbus alterius visceris, id est jocinoris, æque consuevit esse modo longus, modo acutus: Græci vocant ἡπατικὸν (hepaticus).

Est vehemens dolor dextra parte sub præcordiis; que idem pervenit ad dextrum latns, et ad jugulum, que humeram ejusdem partis: nonnumquam quoque dextra manus torquetur: est validus horror: ubi est male, bilis evomitnr: interdum singultus prope strangulat. Et quidem hæc sunt (symptomata) acuti morbi.

Vero longioris, ubi est suppuration in jocinore; que dolor modo finitur, modo intenditur; præcordia sunt dura (in) dextra parte, et tument; post eibum est major difficultas spiritus; quædam resolutio maxillarum accedit. Ubi malum inveteraverit, venter et erura que pedes intumescunt; pectus atque humeri, que circa utrumque jugulum extenuatur.

TRANSLATION.

CHAP. VIII.

OF HEPATITIS.

THERE is also a disease of another viscus, that is the liver, which is equally subject to be sometimes chronic, sometimes acute: the Greeks call it hepatitis.

There is a violent pain in the right side under the præcordia; and this extends up the right side as far as the clavicle, and to the shoulder of the same side: sometimes the right hand also is tormented with the pain; there is violent shivering; when it is severe, bile is vomited: sometimes the patient is almost strangled with hiccough. These then are the symptoms of the acute form of the disease.

But when the disease proceeds to suppuration in the liver, then it is more of a chronic character: and the pain sometimes ceases; sometimes it is augmented; the præcordia are hard and swollen in the right side; there is greater difficulty of breathing after food; the jaws become affected with a species of paralysis. When the disease has grown inveterate, the abdomen, legs, and feet become œdematosus; the chest, shoulders, and around the clavicles on each side of the neck are emaciated.

Initio sanguinem mittere optimum est: tum venter solvendus est, si non potest aliter, per nigrum veratrum: imponenda extrinsecus cataplasma, primum quæ reprimant, deinde calida, quæ diducant; quibus recte iris vel absinthium adjicitur: post hæc, malagma.

Dandæ vero sorbitiones sunt, omnesque eibi, et calidi, et qui non multum alunt, et fere qui pulmonis quoque dolori convenient; præterque eos, qui urinam movent, potionesque ad id efficiaces. Utilia in hoc morbo sunt thymum, satureia, hyssopum, nepeta, amyllum, sesamum, lauri baccæ, pini flos, herba sanguinalis, mentha, ex malo cotonleo medium, columbae jecur recens et erudum: ex quibus quædam per se esse, quædam adjicere vel sorbitioni vel potioni licet; sic tamen, ut parce assumentur. Neque alienum est, absinthium contritum ex melle et pipere, ejusque catapotium quotidie devorare.

Abstinendum utique est ab omnibus frigidis: neque enim res ulla magis jecur lædit. Frictionibus utendum in extremis partibus: vitandus omnis labor, omnis vehementior motus: ne spiritus quidem diutius continendus est. Ira, trepidatio, pondus, ictus, cursus,

ORDO.

Initio est optimum mittere sanguinem: tum venter est solvendus, si non potest aliter, per nigrum veratrum: cataplasma imponenda extrinsecus, primum quæ reprimant, deinde calida, quæ diducant; quibus iris vel absinthium adjicitur recte: post hæc, malagma.

Vero sorbitiones, que omnes eibi, et calidi, et qui non alunt multum sunt dandæ, et fere qui quoque convenient dolori pulmonis; que præter eos, qui movent urinam, que potionis (sunt) efficaces ad id. Thymum, satureia, hyssopum, nepeta, amyllum, sesamum, baccæ lauri, flos pini, sanguinalis herba, mentha, medium ex cotonleo malo, recens et crundum jecur columbae, sunt utilia in hoc morbo: ex quibus lietet quædam esse per se, adjicere quædam vel sorbitioni vel potioni; tamen sic, ut assumantur parce. Neque est alienum, absinthium contritum ex melle et pipere, que devorare catapotium ejus quotidie.

Utique est abstinendum ab omnibus frigidis: enim neque ulla res lædit jecur magis. (Est) utendum frictionibus in extremis partibus: omnis labor (est) vitandus, omnis vehementior motus: ne quidem spiritus est continendus diutius. Ira, trepidatio, pondus, ictus, cursus, sunt

TRANSLATION.

The first and best step is to let blood: then the bowels must be purged by black hellebore, if that cannot be done otherwise: at first astringent cataplasms must be applied externally, then warm discutient ones: to which iris or wormwood may be advantageously added: after these, a malagma.

Now gruels are to be given, and all food must be both warm and slightly nutritious, and especially such things as are indicated in disease of the lungs; and besides these, other aliments which promote the urine, and diuretic drinks. The following are useful in this disease; viz. thyme, savoury, hyssop, catmint, stachys, sesamum, laurel-berries, pine flowers, blood-wort, mint, the pulp of a quince, a fresh raw pigeon's liver: of these some may be eaten alone, some may be added either to the gruel or the drink, yet in such a manner, that they may be taken sparingly. Neither is it improper to swallow wormwood bruised with honey and pepper, and to take a bolus of this daily.

He must carefully avoid every thing cold: for nothing injures the liver more. To employ friction on the extremities: all labour, and violent motion must be avoided: not even the breath should be retained too long. Anger, trepidation, a

inimica sunt. Perfusio corporis multa prodest ex aqua, si hiems est, calida; si aestas, tepida: item liberalis unctio, et in balneo sudor. Si vero jecur vomica laborat, eadem facienda sunt, quae in eeteris interioribus suppurationibus. Quidam etiam contra id scalpello aperunt, et ipsam vomicam adurunt.

ORDO.
inimica. Perfusio corporis ex multa aqua prodest, si est hiems, calida; si aestas, tepida: item liberalis unctio, et sudor in balneo. Vero si jecur laborat vomica, eadem sunt facienda, quae in eeteris interioribus suppurationibus. Etiam quidam aperunt contra id scalpello, et adurnt vomicam ipsam.

TRANSLATION.

heavy weight, blows, are all inimical. In winter the body should be subjected to a copious effusion of warm water; but in summer, tepid; also plentiful unction, and sweating in the bath. But if there be an imposthume in the liver, the same means are to be used, as in other internal suppurations. Some even make an opening over it with a scalpel, and cauterize the imposthume itself.

DISEASES OF THE SPLEEN.

BUT when the spleen is affected, it swells, and at the same time the left side is enlarged with it, indurated, and resists pressure: the abdomen is tense: there is also some swelling of the legs: the ulcers either do not heal at all, or at best they cicatrize with difficulty: walking briskly or running is accompanied with pain and some difficulty.

Rest aggravates this disease: hence labour and exercise are necessary; yet exercising a due precaution, lest those things excite fever, if they be carried too

frictionesque, et sudores necessarii sunt. Dulcia omnia inimicia sunt; item lac et easeus: acida autem maxime convenient. Ergo acetum acre per se sorbere, et magis etiam, quod scilla conditum est, expedit.

Edenda sunt salsamenta, vel oleæ ex muria dura; tinctæ in aceto lactucæ, intubique ex eodem, betæ ex sinapi, asparagus, armoracia, pastinaca, unguilæ, rostra, aves maeræ, ejusdem generis venatio. Potui vero jejuno dari debet absinthium incoctum: at post cibum aqua a ferrario fabro, in qua candens ferrum subinde tinetur sit: hæc enim vel præcipue liuen coereet. Quod animadversum est in iis animalibus, quæ apud hos fabros educata exiguo liuenes habent.

Potest etiam dari vinum tenue, austерum; omniaque in cibis et potionibus, quæ urinæ movendæ sunt. Præcipue que ad id valet vel trifolii semen, vel cuminum, vel apium, vel serpyllum, vel eytisus, vel portulaca, vel nepeta, vel thymum, vel hyssopum, vel satureia: hæc enim inde commodissime videntur humorem educere. Lienis quoque bulbulus utiliter esui datur; præcipue que eruca et nasturtium liuen extenuant.

ORDO.

frictiones, et sudores sunt necessarii. Omnia dulcia sunt inimica; item lachesis et casens: autem acida convenient maxime. Ergo, expedit sorbere acre acetum per se, et etiam magis, quod est conditum seilla.

Salsamenta sunt edenda, vel oleæ ex dura muria; laetuæ tinetæ in aceto, que intubæ ex codem, betæ ex sinapi, asparagus, armoracia, pastinacea, unguilæ, rostra, maeræ aves, venatio ejusdem generis. Vero in eoctum absinthium debet dari potni jejuno: at aqua a ferrario fabro, in qua candens ferrum sit tinetum subinde post eibum: enim hæc vel præcipue coereet liuenem. Quod est animadversum in iis animalibus, quæ educata apud hos fabros, habent exiguo liuenes.

Tenue, ansterum vinum etiam potest dari; que omnia in eibis et potionibus, quæ sunt movendæ urinae. Que præcipue vel semen trifolii valet ad id, vel eu-minum, vel apium, vel serpyllum, vel eytisus, vel portulaea, vel nepeta, vel thymum, vel hyssopum, vel satnreia: enim hæc videntur edne rehnm morem inde commodissime. Quoque liuenis buble datur esui utiliter; que ernea et nasturtium præcipue extenuant liuenem.

TRANSLATION.

far. Unction, friction, and perspiration are necessary. All sweet things are injurious; also milk and cheese: but acid things are more compatible. Therefore it is expedient to sip sharp vinegar by itself, and more particularly that in which squills have been preserved.

Salsaments should be eaten, or olives preserved in strong brine; lettuces and endive dipped in vinegar, and beet-root with mustard, asparagus, horseradish, wild parsnip, the feet, cheeks of animals, lean birds, and game. But a decoction of wormwood ought to be given to the patient fasting by way of drink: but after food the water of a blacksmith's forge, in which he plunges his hot irons very frequently, for this has a very powerful effect on the spleen. This has been observed in those animals reared about smithies, that they have small spleens.

Attenuated, and even anstere wine may be given, and every thing in the food or drink that is calculated to promote the urine. The seed of trefoil possesses considerable efficacy, or cumin, or parsley, or wild thyme, or eytisus (18), or purslane, or eat-mint, or thyme, or hyssop, or savoury: for these things seem to abstract the humor from it most effectually. The spleen of an ox is also given with advantage; and rocket and erresses have a powerful influence in extenuating the spleen.

Imponenda quoque extrinsecus sunt, quæ levent. Fit ex unguento et palnulis, quod *μυροβάλανον* Græci vocant: fit ex lini et nasturtii scmine, quo vimum et oleum adjicitur: fit ex cupresso viridi, et arida fieri: fit ex sinapi, cui sevi hircini a reuibus quarta pars ponderis adjicitur, teriturque in sole, et protinus imponitur.

Multisque modis huic rei cappari aptum est: nam et ipsum cum cibo assumere, et muriam ejus cum aceto sorbere commodum est. Quin etiam extrinsecus radicem contritam, vel corticem ejus cum furfuribus, aut ipsum cappari cum melle contritum imponere expedit. Malagmata quoque huic rei aptantur.

ORDO.

Quoque, quæ levent sunt imponenda extrinsecus. Quod Græci vocant *μυροβάλανον* (myrobalanns), fit ex unguento et palnulis: fit ex semine lini et nasturtii, quo vimum et oleum adjicitur: fit ex viridi cupresso, et arida fieri: fit ex sinapi, cui quarta pars ponderis sevi a reuibus hircini adjicitur, que teritur in sole, et imponitur protinus.

Que cappari est aptum huic rei multis modis: nam et est commodum assumere ipsum cum cibo, et sorbere muriam ejus cum aceto. Quin etiam expedit imponere radicem, vel corticem ejus contritam cum furfuribus, ant cappari ipsum contritum cum melle extrinsecus. Quoque malagmata aptantur huic rei.

TRANSLATION.

There shoule be some external applications also to relieve the pain. That whieh the Greeks call myrobalanns is made out of ointment and dates: or of linteal and the seed of cresses, to which they add wine and oil: or it is made of green cypress and dry figs: or of mustard with a fourth part of the suet of a goat's kidney, rubbed in the sun, and laid on immediately.

Capers too under various modifications are applicable in this ease: for it is not only advantageous to take it with food, but to sip the liquor of it with vinegar. Also it is expedient to apply the bruised root externally, or the rind of it with bran, or the caper itself rubbed up with honey. Malagmata also are applicable in this disease.

Neque tamen sneeritur nilli morbo minori momento.

TRANSLATION.

CHAP. XI.

DISEASES OF THE INTESTINES, AND FIRST OF CHOLERA.

FROM the viscera we proceed to the intestines, which are susceptible both of acute and chronic diseases. In the first place I must make mention of cholera; because it appears to be a disease common to the stomach and intestines. For there is both purging and vomiting at the same time: besides these, there is flatulence, torturing of the intestines, bile is ejected both upwards and downwards, at first it resembles water, afterwards as if fresh meat had been washed in it, sometimes white, sometimes black, or variegated.

Therefore the Greeks have given to this disease the name of cholera. But besides those symptoms which have been enumerated above, the legs and hands are often seized with involuntary contractions, and the patient is attacked with violent thirst and syncope: with such a combination of causes it need not surprise us if the patient die suddenly. Yet there is no disease relieved with less difficulty.

Protinus ergo, ubi ista cœperunt, aquæ tepidæ quam plurimum bibere oportet, et vomere. Vix umquam sic non vomitus sequitur; sed etiamsi non incidit, miscuisse tamen novam materiaam corruptæ prodest; parsque sanitatis est, vomitum esse suppressum. Si id incidit, protinus ab omni potionē abstinentum est. Si vero tormina sunt, oportet frigidis et humidis fomentis stomachum fovere; vel, si venter dolet, iisdem egelidis, sic, ut venter ipse mediocriter calentibus jubaretur.

Quod si vehementer et vomitus, et dejectio, et sitis vexant, et adhuc subcruda sunt, quæ vomuntur, nondum vino maturum tempus est: aqua, neque ea ipsa frigida, sed potius egelida danda est: admovendumque naribus est pulegium ex aceto, vel polenta vino aspersa, vel mentha secundum naturam est.

At eum discussa cruditas est, tum magis verendum est, ne anima deficiat. Ergo tum confugiendum est ad vinum. Id esse oportet tenue, odoratum, cum aqua frigida mistum; vel polenta ad-

ORDO.

Ergo protinus, nbi ista cœperunt, oportet bibere quam plurimum tepidæ aquæ, et vomere. Sie vomitus vix umquam non sequitur; sed etiamsi non incidit, tamen prodest miscuisse novam materiaam corruptæ; que vomitum esse suppressum, est pars sanitatis. Si id incidit, est protinus abstinentum ab omni potionē. Vero si sunt tormina, oportet fovere stomachum frigidis et humidis fomentis; vel, si venter dolet, iisdem egelidis, sic, ut venter ipse javetur mediocriter calentibus.

Quod si et vomitus, et dejectio, et sitis vexant vehementer, et quæ vomuntur, sunt adhuc subcruda, est nondum inaturum tempus vino: aqua est danda, neque ea ipsa frigida, sed potius egelida: que pulegium ex aceto est admovendum naribus, vel polenta aspersa vino, vel mentha secundum naturam.

At cum cruditas est disensa, tum est verendum magis, ne anima deficiat. Tum ergo est confugiendum ad vinum. Id oportet esse tenue, odoratum, mistum cum frigida aqua; vel

TRANSLATION.

Therefore when those symptoms have appeared, he should be compelled to drink copiously of tepid water without delay, and to vomit. This scarcely ever fails to excite vomiting; but although it may not, yet it will be beneficial to mingle fresh fluids with that which is already vitiated; and it is one half of the recovery, if the vomiting be suppressed. If that be accomplished, he should abstain from all drink immediately. If there be tormina, it will be necessary to bathe the stomach with cold and moist fomentations; or if the abdomen be painful, the same to be applied, tepid, and to relieve the bowels themselves by something moderately warm.

But if both vomiting, and purging, and thirst violently harass the patient, and what is ejected be as yet somewhat crude, it is not yet the proper time for wine: water must be given, and even that itself not cold, but rather lukewarm. Pennyroyal dipped in vinegar should be applied to the nostrils, or polenta sprinkled with wine, or mint in the natural state (20).

But when the indigestion has been removed, then there is the more reason to apprehend syncope. Therefore that is the time to resort to wine. This ought to be diluted, fragrant, and mixed with cold water; or it may be expedient to take it

jeeta, vel melle quoque assumere expedit: quotiesque aliquid ant stomachae, aut venter effudit, toties per haec vires restituere.

Erasistratus primo tribus vini guttis, aut quinis aspergendarum potionem esse dixit; deinde paulatim merum adjiciendum. Is, si et ab initio vinum dedit, et metum eruditatis secutus est, non sine causa fecit: si vehementem infirmitatem adjuvari posse tribus guttis putavit, erravit.

At si inauis est homo, et erura ejus contrahuntur, interponenda potio absinthii est. Si extremæ partes corporis frigent, ungendæ sunt ealido oleo, cui eeræ paulum sit adjectum, ealidisque fomentis nutriendæ. Si ne sub his quidem quies facta est, extrinseeus contra ventriculum ipsum eueurbitala admovenda est, aut sinapi superimponendum.

Ubi is eonstitit, dormire oportet: postero die utique a potionē abstinere: die tertio in balneum ire: paulatim se cibo refiere; somno quisquis facile adquiescit; vitataque lassitudine et frigore. Si post suppressam cholera

ORDO.

polenta adjecta, vel quoque expedit assumere melle: que quoties ant stomachus, aut venter effudit aliquid, toties restituere vires per haec.

Erasistratus primo dixit potionem esse aspergendarum tribus, aut quinis guttis vini; deinde merum (est) adjiciendum paulatim. Is, si dedit vinum et ab initio, et est secundus metum eruditatis, fecit non sine causa: si putavit vehementem infirmitatem posse adjuvari tribus guttis, erravit.

At si homo est inanis, et crura ejus contrahuntur, potio absinthii est interponenda. Si extremæ partes corporis frigent, sunt ungendæ calido oleo, cui paulum ceræ sit adjectum, que (sunt) nutriendæ ealidis fomentis. Si ne quidem quies est facta sub his, encerbitula est admovenda extrinsecus contra ventriculum ipsum, aut sinapi (est) superimponendum.

Ubi is constitit, oportet dormire: utique abstinere a potionē postero die: ire in balneum tertio die: reficere se cibo paulatim; quisquis adquiescit facile somno; que lassitudine et frigore vitata. Si febricula manet postehleram suppressa-

TRANSLATION.

either with the addition of polenta, or honey: and as often as the stomach or bowels have ejected their contents, so often must they be replenished by these means.

Erasistratus said that the drink should be mixed at first with three or five drops of wine; afterwards pure wine to be added gradually. If he gave wine from the beginning, with the fear of indigestion, he did it not without a motive: but if he thought that great debility could be relieved by three drops of wine, he was mistaken.

But if the patient be weak, and his legs affected with spasm, a potion of wormwood is to be given at intervals. If the extremities of the body be cold, they are to be anointed with hot oil, to which a little wax may be added, and to be soothed with hot fomentations. If rest have not been procured even by these, a cupping glass should be applied externally over the stomach itself, or a sinapism laid over it.

When the action of this organ has ceased, it behoves the patient to sleep: on the following day he must abstain from drink: on the third day to take a bath; to restore himself gradually with food, and sleep, whoever rests easily; avoiding lassitude and cold. If slight fever remain after the suppression of the cholera, it will

febricula manet, alvum duci necessarium est: tum eibis, vinoque utendum cst. Sed hic quidem morbus et acutus est, et inter intestina stomachumque versatur sic, ut, ejus potissimum partis sit, non facile dici possit.

ORDO.

TRANSLATION.

CHAP. XII.

THE CÖELIAC DISEASE OF THE STOMACH.

BUT there exists in the pyloric orifice of the stomach itself, a disease which is usually of a chronic character: it is named cœliaens by the Greeks. Under this disease the abdomen becomes indurated and painful: the bowels are constricted, and does not even permit the escape of flatus: the extremities are cold: the breathing is rendered difficult.

In the commencement it is most advantageous to apply hot cataplasms over the whole of the abdomen, that they may relieve the pain: to vomit after food, and by this to empty the stomach: on the subsequent days to apply the cupping glasses

sine ferro ventri et coxis admovere: ventrem ipsum liquare dato lacte, et vino salso, frigido; si tempus anni patitur, etiam viridibus ficiis: sic tamen, ne quis aut cibus, aut humor universus detur, sed paulatim.

Ergo per intervalla temporis sat est cyathos binos ternosve sumere, et cibum pro portione hujus: commodeque facit cyathio laetis cyathus aquæ mistus, et sic datus: eibique inflantes et acres utiliores sunt; adeo ut lacti quoque recte contritum allium adjieatur. Procedente vero tempore, opus est gestari; maximeque navigare; perficari ter aut quater in die, sic, ut nitrum oleo adjieatur; perfundi aqua calida post cibum; deinde sinapi imponere per omnia membra, excepto capite, donec arrodatur et rubeat; maximeque si corpus durum et virile est: paulatim deinde faciendus est transitus ad ea, quæ ventrem comprimunt.

Assa caro danda, valens, et quæ non facile corrumpatur: potui vero, pluvialis aqua decocta, sed quæ per binos ternosve cyathos bibatur. Si vetus vitium est, oportet laser quam optimum ad piperis magnitudinem de-

TRANSLATION.

CHAP. XIII.

THE DISEASE OF THE SMALLER INTESTINES.

Now there are two diseases peculiar to the intestines themselves; one of which is in the smaller, the other in the larger intestine. The first is acute: the latter may be chronic. Dioles the Carystian called the disease of the smaller intestine chordapsus, that of the larger ileus.

But I observe now that most persons term the first ileus, the latter eoliens. Now the first eases a pain sometimes above the umbilicus, sometimes below it. Inflammation takes place in either part: neither the faeces nor wind pass downwards: if the upper part be affected, food, if the lower, stereoraceous matter is

ferior, stereus per os redditur; si utrumlibet vetus est. Adjicit periculo vomitus biliosus, mali odoris, aut varius, aut niger.

Remedium est, sanguinem mittere; vel eueurbitulas pluribus locis admovere, non ubique cuncte incisa: id enim duobus aut tribus locis satis est: ex eeteris spiritum evocare abunde est. Tum animadvertere oportet, quo loco malum sit: solet enim contra id tumere.

Et si supra umbilicum est, alvi ductio utilis non est: si infra est, alvum dueere, ut Erasistrato placuit, optimum est; et saepe id auxiliū satis est. Duetitur autem pereolato ptisanæ cremore, eum oleo et melle, sie, ut præterea nihil adjiciatur. Si nihil tumet, duas manus imponere oportet supra summum ventrem, paulatimque deducere: inventetur enim mali locus, qui necesse est renitatur; et ex eo deliberari poterit, dueenda, nee ne alvus sit.

Illa communia sunt: calida cataplasma admovere, eaque imponere a mammis usque ad inguina et spinam, ac saepe mutare: brachia cruraque perfri-

affecta), sternus (redditur per os); si utrumlibet (morbis) est vetus. Biliosus, aut varius, aut niger vomitus, mali odoris, adjicit periculo.

Remedium est, mittere sanguinem; vel admovere eucurbitulas pluribus locis, cuncte non incisa: enim id est satis duobus aut tribus locis: est abunde evocare spiritum ex ceteris. Tum oportet animadvertere, quo loco malum sit: enim solet tumere contra id (locom).

Et si est supra umbilicum, ductio alvi non est utilis: si est infra, est optimum, ducere alvum, ut placuit Erasistrato; et id est saepe satis anxillii. Antem ducetur percolato cremore ptisanæ, cum oleo et melle, sic, ut nihil præterea adjiciatur. Si nihil tumet, oportet imponere duas manus supra summum ventrem, que deducere paulatim: enim locus mali inventetur, qui est necesse renitatur; et poterit deliberari ex eo, neene, alvus sit ducenda.

Illa sunt communia (remedia): admovere calida cataplasmata, que imponere ca a mammis usque ad inguina et spinam, ac mutare saepe: perficere brachia

TRANSLATION.

rendered by the mouth; in either the one or the other the case is inveterate. Biliary vomiting of bad odour, or various coloured, or black, incases the danger.

The remedy is blood-letting; or to apply the cupping glasses in several places, but the incisions are not to be made every where: for that is sufficient in two or three places: it is enough to abstract the air from the others. Then it is necessary to ascertain, in what place the disease may be seated: for there is usually a swelling over it.

If it be above the umbilicus injections avail nothing: if below, according to Erasistratus, it is best to purge the bowels by injections; and very frequently this remedy is sufficient of itself. Now this enema is composed of the strained liquor of ptisan with oil and honey, so that nothing else need be added. If there be no tumefaction, it will be necessary to apply both hands to the upper part of the abdomen, and pass them down gradually; for by this the seat of the disease will be discovered, which must necessarily resist the pressure: and from that it may be inferred, whether the bowels are to be elystered or not.

These are general remedies: to apply hot cataplasms from the breasts as far as the groins and extending to the spine, and to change them often: to rub the arms

care: demittere totum hominem in calidum oleum: si dolor non quiescit, etiam in alvum ex parte inferiore tres aut quatuor eyathos calidi olei dare. Ubi per haec consecuti sumus, ut jam ex inferiore parte spiritus transmittatur, offerre potui mulsum tepidum non multum: nam ante magna eura vitandum est, ne quid bibat. Si id commode eessit, adjicere sorbitonem.

Ubi dolor et febrieula quierunt, tum demum uti eibo pleniore; sed neque inflante, neque duro, neque valido, ne intestina adhue imbecilla laedantur. Potui vero nihil, praeterquam puram aquam. Nam sive quid vinoletum sive aeidum est, id huic morbo alienum est. Ac postea quoque vitare oportet balneum, ambulationem, gestationem, ceterosque corporis motus. Nam facile id malum redire consuevit; et sive eum frigus subit, sive aliqua jactatio, nisi bene jam eonfirmatis intestinis, revertitur.

Ac postea oportet quoque vitare balneum, ambulacionem, gestationem, que celeros motus corporis. Nam id malum consnevit redire facile; et sive cum frigus subit, sive aliqua jactatio, revertitur, nisi intestinius bene confirmatis jam.

TRANSLATION.

and legs: to immerse the patient entirely in warm oil: if the pain yield not, to give an injection composed of three or four glasses of warm oil. When by these means we have obtained the expulsion of the wind inferiorly, we may allow the patient a little warm hydromel, but the greatest care must be taken that he shall have drunk nothing previously. If the result be favourable we may add gruel.

When the pain and fever have ceased then we may allow a fuller diet, but neither flatulent, hard, nor strong, lest the intestines being as yet weak, may be injured. But for drink, nothing except pure water: for, whether any thing be vinous or acid, it is alike injurious in this disease. Even afterwards he must avoid bathing, walking, gestation, and other movements of the body. This disease is easily induced to return; and whether it be brought on by cold, or some agitation, unless the intestinal canal be restored to a healthy state, it is reproduced.

CAP. XIV.

DE MORBO PLENIORIS INTESTINI.

Is autem morbus, qui in intestino plenior est, in ea maxime parte est, quam cæcum esse proposui. Vehemens fit inflatio, vehementes dolores, dextra magis parte: intestinum, quod verti videtur, prope spiritum elidit. In plerisque post frigora eruditatesque oritur, deinde quiescit; et per aetatem saepe repetens sic erueiat, ut vitæ spatio nihil demat.

Ubi is dolor cœpit, admovere sicca et calida fomenta oportet; sed primo lenta, deinde validiora; simulque fritione ad extremas partes, id est, erura brachiaque materiam evocare: si discussus non est, qua dolet, cueurbitulas sine ferro defigere. Est etiam medicamentum ejus rei causa comparatum, quod *κολικὸν* nominatur. Id se reperrisse Cassius gloriabatur. Magis prodest potui datum: sed impositum quoque extrinseeus, digerendo spiritum, dolorem levat.

AUTEM is morbus, qui est in plenior intestino, est maxime in ea parte, quam proposui esse cæcum. Vehemens inflatio fit, vehementes dolores, magis dextra parte: intestinum, quod verti videtur, prope elidit spiritum. In plerisque oritur post frigora eruditates, deinde quiescit; et saepe repetens per aetatem sic erueiat, ut demat nihil spatio vita.

Ubi is dolor cœpit, oportet admovere sicca et calida fomenta; sed primo lenta, deinde validiora; que simul evocare materiam ad extremas partes, id est, erura que brachia fritione: si non est dispersus, qua dolet, defigere cueurbitulas sine ferro. Etiam est medicamentum comparatum causa ejus rei, quod nominatur *κολικὸν* (colicus). Cassius gloriabatur se reperrisse id. Prodest magis datum potui: sed quoque impositum extrinsecus, levat dolorem, digerendo spiritum.

TRANSLATION.

CHAP. XIV.

THE DISEASE OF THE LARGER INTESTINE.

Now that disease, which arises in the larger intestine, is chiefly confined to that part which I previously described as the cæcum. There is great inflation produced, violent pains, particularly in the right side: the intestine, which seems to be everted, almost forces out the wind. It arises in most cases after colds and indigestion, then ceases: and frequently returning during the whole of a person's life, inflicts a torment, without abbreviating the term of existence.

When this pain has begun, it is necessary to apply dry and warm fomentations; but at first gentle, afterwards more powerful; and at the same time to produce a derivation of the humour to the extremities, that is the legs and arms, by friction: if it be not removed, to apply dry cupping over the part affected. There is also a remedy prepared for this purpose, which is named Colicon. Cassius boasted of having discovered it. It is more advantageously given as a drink; but even applied externally it relieves the pain, by dispersing the wind.

Nisi finito vero tormento, recte neque cibus neque potio assumitur. Quo victu sit utendum iis, qui hoc generc tentantur, jam mihi dictum est. Confectio medicamenti, quod *κολικὸν* nominatur, ex his constat. Costi, anisi, castorei, singulorum p. $\text{X}.$ III. petroselini p. deū. IIII. piperis longi, et rotundi, singulorum p. $\text{X}.$ II. papaveris lacrimæ, junci rotundi, myrræ, nardi, singulorum p. $\text{X}.$ VI. quæ melle excipiuntur. Id autem et devorari potest, et ex aqua calida sumi.

ORDO.

Vero neque cibus neque potio assumitur recte, nisi tormento finito. Jam est dictum mihi, quo victu sit utendum iis, qui tentatur hoc genere. Confectio medicamenti, quod nominatur *κολικὸν* (colic), constat ex his. Costi, anisi, castorei, singulorum p. $\text{X}.$ IIII. petroselini p. deū. IIII. longi, et rotundi piperis, singulorum p. $\text{X}.$ II. lacrimæ papaveris, rotundi junci, myrræ, nardi, singulorum p. $\text{X}.$ VI. quæ excipiuntur melle. Autem id et potest devorari, et sumi ex calida aqua.

TRANSLATION.

But neither food nor drink should be given until the pain be removed. I have already treated of the regimen proper for those who are afflicted by this kind of disease (21). The composition of that medicinie, which is called Colicon, consists of the following ingredients : of costus, anise, castor, of each p. $\text{X}.$ III. of parsley p. deū. IIII. of long, and round pepper of each p. $\text{X}.$ II. of poppy tears, round cypers, myrrh, nard, of each p. $\text{X}.$ VI. all incorporated with honey. Now this may be swallowed alone, or taken with warm water.

TRANSLATION.

the pain, and render the ulcers milder, and are particularly beneficial, if nausea also have supervened.

Themisou has transmitted by his opinion, that the strongest brine should be used in this manner. But the food ought to be such as may bind the bowels gently. But those things which promote the urine have a good effect, if they succeed, by determining the fluids into another part; if they do not, they increase the mischief: therefore they must not be administered, except to those on whom they have been accustomed to produce that effect readily. If there be fever, pure warm water must be given to drink, or that which has an astringent property: if that is not to be had, light, austere wine.

If those remedies have rendered no assistance after the experience of several days, and now the malady has become chronic, the drinking of very cold water astranges the ulcers and thereby institutes the beginning of a cure. But when the bowels have been once constipated, then the patient may return to warm drinks immediately. Sometimes also a putrid sanies, of a most foetid odour descends; and at other times a flux of pure blood.

If in the former of these maladies, the bowels ought to be injected with diluted hydromel, and then with those things which have been comprehended above. A

Valensque est etiam adversus eancerem intestinorum, minii gleba cum salis hemina contrita, si mixta his aqua in alvum datur. At si sanguis profluit, eibi potionesque esse debent, quae adstringant.

CHAP. XVI.

OF LIENTERIA.

LIENTERIA sometimes arises from dysenteria; in which the intestines can retain nothing, and whatever the ingesta may be, it is voided in an imperfect state. Sometimes a patient lingers in this disease, sometimes it carries him off rapidly.

In this it is particularly necessary to administer astringents; by which the power of the intestines may be enabled to retain any thing. Therefore mustard should be laid on the chest; and when the skin is ulcerated, a malagma calenlated to promote the discharge: the patient may also sit down in a decoction of vervains; and take such food and drink as bind the bowels; and employ the cold affusion.

Oportet tamen prospicere, ne, simul his omnibus admotis, vitium contrarium per immodicas inflationes oriatur. Paulatim ergo firmari intestina debebunt, aliquibus quotidie adjectis. Et cum in omni flnore ventris, tum in hoc præcipue necessarium est, non quoties libet desidere, sed quoties necesse est; ut hæc ipsa mora in consuetudinem ferendi oneris intestina deducat.

Alterum quoque, quod æque ad omnes similes affectus pertinet, in hoc maxime servandum est; ut, cum pleuraque utilia insuavia sint, qualis est plantago, et rubi, et quidquid malicorio mistum est, ea potissimum ex his dentur, quæ maxime æger volet: deinde, si omnia ista fastidiet, ad excitandam cibi cupiditatem, interponatur aliquid minus utile, sed magis gratum. Exercitationes et frictiones huic quoque morbo necessariæ sunt; et cum his sol, ignis, balneum, vomitus, ut Hippocrati visum est, etiam albo veratro, si cetera parum proficient, evocatus.

ORDO.

Tamen oportet prospicere, ne, omnibus his admotis, contrarium vitium oriatur per immodicas inflationes. Ergo intestina debebunt firmari paulatim, aliquibus adjectis quotidie. Et cum est necessarium, non desidere quoties libet, sed quoties est necesse, in omni flnore ventris, tum præcipue in hoc; ut hæc mora ipsa deducat intestina in consuetudinem ferendi oneris.

Quoqne alterum, quod æque pertinet ad omnes similes affectus, est servandum maxime in hoc; ut, eum sint pleraque ntilia insuavia, qualis est plantago, et rubi, et quidquid est mistum malicorio, potissimum ea dentur ex his, quæ æger maxime volet: deinde, si fastidiet omnia ista, ad excitandam cupiditatem eibi, aliquid minus ntile interponatur, sed magis gratum. Exercitationes et quoque frictiones sunt necessariae huic morbo; et cum his, sol, ignis, balneum, vomitus etiam evocatus albo veratro, ut est visum Hippocrati, si eetera proficien parum.

TRANSLATION.

But it is necessary, however, to guard, lest the application of all those remedies at the same time, may not give rise to another disease in the opposite extreme from immoderate flatulencies. Therefore the intestines ought to be strengthened gradually, by adding something to the food daily. Hence in every disorder of the bowels, but more particularly in this, it is necessary, not to go to stool so often as there is a desire, but as often as there is a necessity; that this delay itself may habituate the intestines to bear their usual burden.

There is also, another observation which is equally applicable to all similar affections, and must be particularly adhered to in this; that, since the most useful remedies in this disorder are disagreeable, such as plantain, bramble berries, and whatever is mixed with pomegranate rind, those chiefly are to be given which the patient shall wish most for: but should he loath them all, something less beneficial, but more grateful, may be interposed, to excite a desire for food. Exercises and frictions are also necessary in this disease; and with these, Hippocrates approved of the heat of the sun, fire, the bath, and vomiting, even with white hellebore, if the other means prove abortive.

CHAP. XIX.

OF DIARRHŒA.

A SIMPLE purging, while recent, is still lighter, in which the discharge is both liquid, and rendered more frequent than usual : and sometimes the pain is tolerable, sometimes very severe ; and that is the worst. But for the bowels to be relaxed for one day, is very often conducive to health ; and even for several days,

absit, et intra septimum dicem id conquiescat. Purgatur enim corpus, et, quod intus læsurum erat, utiliter effunditur.

Verum spatium periculosum est: interdum enim tormina ac febriculas excitat, viresque consumit. Primo dicquiescere satis est; neque impetum ventris prohibere. Si per se desit, balneo uti, paulum cibi capere: si mansit, abstinere non solum a cibo, sed etiam a potionē. Postero die, si nihilominus liquida alvus est, æque conquiescere; paulum adstringentis cibi sumere. Tertio die in balneum ire: vehementer omnia præter ventrem perficare: ad ignem lumbos, scapulasque admovere: cibis uti, sed ventrem contrahientibus; vino non multo, meraco.

Si postero quoque die fluet, plus edisse, sed vomere ex toto. Donc conquiescat, contra siti, fame, vomitu niti. Vix enim fieri potest, ut, post hanc animadversionem, alvus non contrahatur.

Alia via est, ubi velis suppressare: cœnare, deinde vomere: postero die in lecto conquiescere; vesperc ungi, sed

ORDO.

absit, et id conquiescat intra septimum diem. Enim corpus purgatur, et, quod erat læsurum intus, effunditur utiliter.

Verum spatium est periculosum: enim interdum excitat tormina ac febriculas, que consumunt vires. Primo die est satis quiescere; neque prohibere impetum ventris. Si desit per se, uti balneo, capere paulum eibi: si mansit, non solum abstinere a cibo, sed etiam a potionē. Postero die, si nihilominus alvus est liquida, conquiescere æque; sumere paulum adstringentis eibi. Tertio die ire in balneum: perficare omnia vehementer præter ventrem: admovere lumbos, que scapulas ad ignem: nti eibis sed contrahientibus ventrem; non multo meraco vino.

Si quoque fluet postero die, edisse plus, sed vomere ex toto. Niti contra siti, fame, vomitu, donee conquiescat. Enim vix potest fieri, ut, post hanc animadversionem, alvus non contrahatur.

Est alia via, supprimere ubi velis: cœnare, deinde vomere: postero die conquiescere in leeto; ungi vesperc, sed leniter: deinde

TRANSLATION.

provided there be no fever present, and that cease within the seventh day. For by this the body is purified, and the offending matter from within, is advantageously thrown off *by a spontaneous effort of nature*.

But the continuation of it is dangerous: for sometimes it produces tormina, slight fevers, and prostration of strength. On the first day it is sufficient to enjoin rest; to take nothing that may restrain the bowels. If the disease have ceased of its own accord, a bath may be taken, and a little food: if it continue, to abstain not only from food, but also from drink. On the following day, if the bowels be nevertheless relaxed, to remain quiet, and to take a little astringent food. On the third day to go into a bath: to apply vehement friction to all parts except the abdomen: to turn the loins and shoulders near to the fire; to take food, but that of an alvine astringent, with a little undiluted wine.

If on the following day, the purging still continue, to eat more, but to vomit also. Upon the whole to combat with it by thirst, hunger, and vomiting until it may cease. For it is scarcely possible to happen, that after this plan of treatment the bowels should remain unconfin'd.

There is another mode to suppress it when one is inclined: to sup and then to vomit: on the following day to rest in bed; to be anointed in the evening, but

leniter: deinde panis circa selibram ex vino Aminæo mero sumere; tum assum aliquid, maximeque avem; et postea vinum idem bibere aqua pluviali mistum: idque usque quintum diem faeere, iterumque vomere. Frigidam autem assidue potionem esse debere, contra priores auctores Asclepiades affirmavit, et quidem frigidissimam. Ego experimentis quemque in se eredere debere existimo, ealida potius, an frigida utatur.

Interdum autem evenit, ut id pluribus diebus negleetum, curari difficileius possit. A vomitu oportet incipere: deinde postero die vespere tepido loeo ungi; cibum modicum assumere, vinum meracum quam aspergium; impositam super ventrem habere cum cerato rutam. In hoc autem affectu corporis neque ambulatione, neque frictione opus est: vehiculo sedisse, vel magis etiam equo, prodest: neque enim ulla res magis intestina eonfirmat.

Si vero etiam medicamentis utendum est, aptissimum est id, quod ex pomis fit. Vindemiæ tempore in grande vas conjicienda sunt pira atque mala silvestria: si ea non sunt, pira Tarentina viridia, vel Signina, mala Scandiana

ORDO.

sumere circa selibram panis ex mero Aminæo vino; tun aliquid assum, que maxime avein; et postea bibere idem vinum mixtum pluviali aqua: que facere id usque quintum diem, que vomere iterum. Autem Asclepiades affirmavit contra priores auctores, potionem debere esse assidue frigidam, et quidem frigidissimam. Ego existimo quemque in se eredere experimentis debere existimo, ealida potius, frigida.

Antem interdum evenit, ut id negleatum pluribus diebus, possit curari difficilis. Oportet incipere a vomitu: deinde ungivit vespere postero dic tepido loco; assumere modicunm cibum, meracum quam aspergium vinum; habere rutam impositam super ventrem cum cerato. Antem in hoc affectu corporis neque est opus ambulatione, neque frictione: sedisse vehiculo, vel etiam magis equo, prodest: nam neque ulla res confirmat intestina magis.

Vero si est etiam intendum medicamentis, id est aptissimum, quod fit ex pomis. Silvestria pira atque mala sunt conjicienda in grande vas tempore vindemiæ: si ea non sunt, viridia Tarentina, vel Signina pira, Scandiana

TRANSLATION.

gently: afterwards to take about half a pound of bread with pure Aminæan wine; then something roasted, and especially a bird; after this to drink the same kind of wine mixed with rain-water: to continue this plan until the fifth day, and again to vomit. But Asclepiades, contrary to the opinion of former authors, has affirmed that the drink ought to be constantly cold: indeed very cold. I think that every one ought to determine by his own experience, whether he may use it hot or cold.

But sometimes it happens, when this complaint is neglected for several days it may be more difficult to be cured. It is necessary to commence with a vomit: then on the evening of the following day let him be anointed in a warm place; to take a moderate portion of food, and pure wine as rough as possible: to have rue and cerate applied over the abdomen. But in this affection of the system, neither walking nor friction are necessary: to take an airing in a carriage is advantageous, but more so on horseback: for nothing strengthens the intestines so much.

If medicines are to be given, those consisting of the apple kind are the most admissible. During the vintage, pears and crab-apples are to be put into a large vessel: if these are not to be obtained, green Tarentine or Sanguine pears, Scandian

vel Amerina, myrapia; hisque adjicienda sunt cotonea, et cum ipsis corticibus suis Punica, sorba, et, quibus magis utimur, etiam torminalia, sic, ut haec tertiam ollæ partem teneant: tum deinde ea musto implenda est; coquendumque id, donec omnia, quæ indita sunt, liquata, in unitatem quamdam coeant. Id gustui non insuave est; ct, quandocumque opus est, assumptum leniter, sine ulla stomachi noxa, ventrem tenet. Duo aut tria coehlaria uno die sumpsisse, satis est.

Alterum valentius genus: myrti bacæas legere, ex his vinum exprimere, id decoquere, ut deeima pars remaneat, ejusque cyathum sorbere. Tertium, quod quandocumque fieri potest: malum Punicum exeavare, exemptisque omnibus seminibus, membranas, quæ inter ea fuerunt, iterum coniucere: tum infundere cruda ova, rudiculaque miscere: deinde malum ipsum super prunam imponere; quod, dum humor intus est, non aduritur: ubi siceum esse coepit, removere oportet, extractumque coelleari, quod intus est, edisse.

Aliquis adjectis, majus momentum habet: itaque etiam in pipcratum coniicitur, misceturque cum sale et pipere,

ORDO.

ana vel Amerina mala, myrapia; que his sunt adjicienda cotonea, et Punica cum suis corticibus ipsis, sorba, et, quibus utimur magis, etiam torminalia, sic, ut haec teneant tertiam partem ollæ: tum deinde ea est implenda musto; que coquendum id, donec omnia, quæ sunt indita, liquata, coeant in quamdam unitatem. Id non est insuave gustui; et, quandemque est opus, leniter assumptum, tenet ventrem, sine ulla noxa stomaehi. Sumpsisse duo aut tria coehlaria uno die est satis.

Alterum (est) valentius genus: legere bacæas myrti, exprimere vinum ex his, decoquere id, ut decima pars remaneat, que sorbere cyathum ejus. Tertium, quod potest fieri quandocumque: exeavare Punicum malum, que omnibus seminibus exemptis, iterum coniucere membranas, que fuerunt inter ea: tum iufundere eruda ova, que misere rudieula: deinde imponere malum ipsum super prunam; quod dum humor est intus, non aduritur: ubi cœpit esse siccum, oportet removere, que quod est intus, extractum coelleari, edisse.

Aliquis adjectis, habet magis momentum: itaque etiam coniicitur in piperatum, que misetur cum sale et pipere, est

or Amerinian apples, or the Myrapian pear (25): and to these may be added quinees and pomegranates with their rind, service fruit, and also tormiualia of which we use more, so that these last may occupy one third of the pot: then the vessel is to be filled with new wine; the whole is to be boiled, until they dissolve and become one uniform mass. This is not disagreeable to the taste; and whenever there is necessity, and being taken in moderation, it restrains the bowels without any injury of the stomach. Two or three spoonfuls in one day will be sufficient.

There is another and more powerful remedy prepared of the expressed juice of myrtle berries boiled down to one tenth, and to sip a glass of it. A third may be prepared at any time, by excavating a pomegranate, and having separated all the seeds, to return the pulp into the shell again: then to pour in raw eggs and mix with a wooden spatula: afterwards put the pomegranate shell with its contents over a clear coal fire, which will not burn while there is moisture within: when it begins to be dry, it should be removed, then taking out the contents with a spoon let it be eaten.

This last remedy acquires more efficacy by the addition of some other things: therefore it is put into peppered vinegar (26), mixed with salt and pepper, and

est quid ex his edendum est. Pulticula etiam, cum qua paulum ex favo veterc coctum sit, et lenticula cum malicorio cocta, rubique cacumina in aqua decocta, et ex oleo atque aceto assumpta, efficacia sunt: atque ea aqua, in qua vel palmulæ, vel malum cotoneum, vel arida sorba, vel rubi decocti sunt, potata: quod genus significo, quoties potionem dandam esse dico, quæ adstringat.

Triticis quoque hemina in vino Aminæo austero decoquitur; idque triticum jejuno ac sitienti datur; superque id vinum id sorbetur: quod jure valentissimis medicamentis adnumerari potest. Atque etiam potui datur vinum Signinum, vel resinatum austereum, vel quodlibet austereum. Contunditurque cum corticibus, seminibusque suis Punicum malum, vinoque tali miscetur: idque vel merum sorbet aliquis, vel bibit mistum. Sed medicamentis uti, nisi in vehementibus malis, supervacuum est.

ORDO.

quid est edendum ex his. Etiam pulticula, cum qua paulum ex veterc favo sit coctum, et lenticula cocta eum malicorio, que cacumina rubi decocta in aqua, et assumpta ex oleo atque aceto, sunt efficacia: atque ea aqua, in qua vel palmulæ, vel cotoneum malum, vel arida sorba, vel rubi sunt decocti, potata: quod genus significo, quoties dico potionem esse dandam, quæ adstringat.

Quoque hemina tritici decoquitur in austero Aminæo vino; que id triticum datur jejuno ac sitienti; que super id, id vinum sorbetur: quod potest adnumerari jure valentissimis medicamentis. Atque etiam Signinum, vel resinatum austereum vel quodlibet austereum vinum datur potui. Que Punicum malum contunditur cum suis corticibus, que seminibus, que miscetur tali vino: que aliquis sorbet id vel merum, vel bibit mistum. Sed uti medicamentis, nisi in vehementibus malis, est supervacuum.

eaten with these (27). Also pulse, with which a little old honeycomb has been boiled, and lentiles boiled with pomegranate rind, and bramble tops boiled in water, and eaten with oil and vinegar are efficacions: also to drink a decoction either of dates, or quinces, or dry service fruit, or bramble berries: which is the kind I mean, whenever I order this drink to be given as an astringent.

A hemina of wheat is also boiled in anstere Aminæan wine; and that wheat is given to the patient fasting and thirsty, and the same wine is to be sipped after it; which may be justly enumerated amongst the most powerful of medicines. The Signine wine is also given to drink, or the austere resined, or any rough wine. The pomegranate is brnised with its rinds and seeds, and mixed with wine of the same sort: and a person may either drink this alone or mixed. But the use of medicines is superfluous, except in violent cases.

CAP. XX.

DE VULVÆ MORBO.

1. Ex vulva quoque foemini vehemens malum nascitur: proximeque ab stomacho, vel afficitur haec, vel corpus afficit. Interdum etiam sic exanimat, ut tamquam comitiali morbo prosternat. Distat tamen hic casus, eo quod neque oculi vertuntur, nec spumæ profluunt, nec nervi distenduntur: sopor tantum est. Idque quibusdam foemini crebro revertens perpetuum est.

Ubi incidit, si satis virium est, sanguis missus adjuvat: si parum est, cucurbitulæ tamen defigendæ sunt in inguinibus. Si diutius aut jacet aut aliqui jacere consuevit, admovere oportet naribus extinctum ex lucerna linamentum, vel aliud ex iis, quæ foedioris esse odoris retuli, quod mulierem excitat. Idemque aquæ quoque frigidæ perfusio efficit. Adjuvatque ruta contrita cum melle, vel ex cyprino ceratum, vel quodlibet calidum et humidum ca-

CHAP. XX.

ON DISEASES OF THE WOMB.

FEMALES are subject to a malignant disease of the womb: and next to the stomach, this organ is highly susceptible of being affected either in itself, or by sympathy affects the rest of the body. Sometimes this affection deprives the patient of all sensibility, in the same manner as if she had fallen in epilepsy. Yet with this difference, that neither the eyes are turned, nor does foam flow from the mouth, nor are there any convulsions: there is only a profound sleep. This disease returning frequently to some females at last becomes habitual.

When this happens, if there be sufficient strength, blood-letting will relieve: if not, the cupping-glasses must be applied to each groin. If the woman remain long in this state, or if accustomed to do so at other times, we should apply the extinguished wick of a lamp to the nostrils which may excite her, or any of those things which I have described as of a very foetid odour. The affusion of cold water produces the same effect. Rue bruised up with honey assists, or cerate of cyprine oil,

taplasma, naturalibus pube tenus impo-
situm. Inter hæc etiam perfriare coxas,
et poplites oportet.

Deinde, ubi ad se rediit, circumcidendum vinum est in totum annum, etiamsi casus idem non revertitur: frictione quotidie utendum totius quidem corporis, præcipue vero ventris, et poplitum: eibus ex media materia dandus: sinapi super imum ventrem tertio quoque aut quarto die imponendum, donee corpus rubeat.

Si durities manet, mollire commode videtur solanum in lae demissum, deinde contritum; et eera alba atque medulla cervina eum irino, aut sevum taurinum vel caprinum cum rosa mistum. Dandum etiam potui vel castoreum est, vel gith, vel anethum. Si parum pura est, purgetur juno quadrato. Si vero vulva exuleerata est, ceratum ex rosa fiat, et reeens suilla adeps, et ex ovis album misceatur, idque apponatur; vel album ex ovo eum rosa mistum, adjecto, quo facilius consistat, contritæ rosæ pulvere. Dolens vero ea sulphure suffumigari debet.

At si purgatio nimia mulieri nocet, remedio sunt eucurbitulæ, eute ineisa,

or any hot and moist cataplasm, applied to the genitals, extending up to the pubes. In the mean time the hips and hams ought also to be rubbed.

Afterwards when she returns to her accustomed state, wine must be withheld from her for a whole year, even although the malady should not return. Daily friction must be employed over the whole body, but especially on the abdomen and hams. The diet should be of the middle class: sinapisms are to be laid on the inferior part of the abdomen every third or fourth day, until the part become red.

If the hardness remain (28) the nightshade moistened with milk and bruised, appears to be a proper emollient, so does white wax and deer's marrow with iris oil, or beef or goat's suet mixed with rose oil. Castor, git, or dill must be given in her drink. If there be impurities of habit, let her be purged with the square cyperns. But if the womb be ulcerated, a cerate may be prepared of rose oil: also fresh hog's lard and the whites of eggs may be mixed together and that applied; or the white of an egg mixed with rose oil, with the addition of rose leaves in powder to make it more tenacious. But when the womb is in pain it ought to be fumigated with sulphur.

If a woman appear to suffer from excessive menstrual discharge, the cupping-

inguinibus vel etiam sub mammis admotæ. Si maligna purgatio est, subjicienda sunt * * * * * [Desunt in vetustissimo exemplari duo folia.] coeuntia. Id faciunt etiam albæ olivæ, et nigrum papaver cum melle assumptum, et gummi cum trito semine apii liquatum, et cum cyatho passi datum. Praeter haec, in omnibus vesicæ doloribus idoneæ potiones sunt, quæ ex odoribus fiunt, id est spica nardi, croco, cinnamo, casia, similibusque: idemque etiam decocta lentiscus præstat. Si tamen intolerabilis dolor est, et sanguis profluit, etiam sanguinis detractio apta est; aut certe coxis admotæ cucurbitulæ cute incisa.

2. At cum urina super potionum modum etiam sine dolore profluens maciem et periculum facit, si tenuis est, opus est exercitatione et frictione, maximeque in sole, vel ad ignem: balneum rarum esse debet, neque longa in eo mora: cibus comprimens: vinum austерum meracum, per aestatem, frigidum; per hiemem, egelidum; sed tantum; quantum minimum sit. Infirma alvus quoque vel ducenda vel lacte purganda est. Si crassa urina est, vehementior esse debet et exercitatio,

DE MORBIS COXARUM.

SUPEREST, ut veniam ad extremas partes corporis, quæ conservantur inter se articulis. Faeiam initium a eoxis. Ingens dolor harum consnevit esse: que is sœpe debilitat hominem, et non dimittit quosdam. Que id genus curatur difficillime eo, quod pestifera vis fere inclinat se huc post longos morbos: quæ ut liberat alias partes, sic prehendit hanc ipsam quoque affectam.

Primum est fovendum calida aqua: deinde utendum calidis eataplasmatis. Coneatus cortex eapparis mistus, aut cum hordeacea farina, aut eum fieri decocta ex aqua, videtur profectum.

TRANSLATION.

CHAP. XXII.

DISEASES OF THE HIP JOINT.

IT remains that I come now to the extremities, which are connected together by articulations. I shall begin with the hips. These are often subject to great pain: and that debilitates the man, and some it never leaves. For this reason, that kind is most difficult to cure, because after long diseases it generally clings with a pestiferous tenacity to those parts: which as it leaves others seizes on this which is affected.

It must be fomented with hot water first: then hot cataplasms should be applied. That which appears to be the most useful in this case, is the sliced bark of the

cocta mistus eapparis eortex eoneisus; vel lolii farina ex vino diluto cocta, et mista cum arida facere: quæ quia refrigerante, imponere noetū malagmata eommodius est. Inulæ quoque radix eontusa, et postea ex viño austero cocta, et late super eoxam imposta, inter valentissima auxilia est. Si ista non solverunt, sale calido et humido utendum est.

Si ne sie quidem finitus dolor est, aut tumor ei aeeedit, incisa eute admovendæ sunt eueurbitulæ; movenda urina; alvus, si compressa est, dueenda. Ultimum est, et in veteribus quoque morbis effieaeissimum, tribus aut quatuor locis super coxam, eutem canden-tibus ferramentis exuleerare. Fritione quoque utendum est, maxime in sole, et eodem die saepius; quo faelius ea, quæ eoeundo noeuerunt, digerantur: eaque, si nulla exuleeratio est, etiam ipsis eoxis; si est, eeteris partibus adhibenda est.

Cum vero saepe aliiquid exuleerandum eandenti ferramento sit, ut materia inutilis evocetur, illud perpetuum est, non, ut primum fieri potest, hujus generis ulcera sanare; sed ea trahere, donec id vitium, cui per haec opitulamur, conquiescat.

TRANSLATION.

caper mixed either with barley-meal or with a decoction of figs; or the flour of darnel boiled in diluted wine and mixed with dry lees: which things as they are apt to cool, it is more advantageous to apply them by night, as malagmata. Also the root of elecampane, bruised and then boiled with austere wine, and laid on extensively over the hip, is among the most powerful remedies. If those things have not removed the malady, hot and moist salt must be applied.

If the pain cease not even then, or if swelling supervene, the cupping glasses and scarificator must be applied: diureties to be administered; the bowels to be injected, if constipated. The last and most efficacious remedy in chronic cases, is to form ulcers in the skin with hot irons in three or four places above the hip. To apply friction several times in the day, especially in the sun: by which means that accumulation of peccant humour may be the more easily dispersed; and that is to be applied on the hips themselves, if there be no ulceration: if there be any, then it is to be employed on other parts of the body.

But since it may be necessary to ulcerate a part frequently with the actual cautery, that the offending matter may be elicited, this rule should always be observed, not to heal ulcers of this kind, so soon as it might be done; but to protract the discharge, until that disease subside, which we wish to relieve by these means.

ORDO.

desse maxime; vel farina lolii cocta ex diluto vino, et mista cum arida facere: quæ quia refrigerant, est commodius imponere (ut) malagmata noctu. Quoque radix inulæ contusa, et postea cocta ex anstero viño, et imposta late super coxam, est inter valentissima auxilia. Si ista non solverunt, est utendum calido et humido sale.

Si ne quidem dolor est finitus sic, aut tumor accedit ei, eueurbitulæ sunt admovendæ eute incisa; urina movenda; alvus dueenda, si est compressa. Exulcerare eutem canden-tibus ferramentis, tribus aut quatnor locis super coxam quoque est ultimum, et efficacissimum in veteribus morbis. Quoque est utendum fritione, maxime in sole, et saepius in eodem die; quo ea digerantur facilis, quæ noeuerunt coenendo: que ea, etiam coxis ipsis, si est nulla exuleeratio; si est (exulcratio) est adhibenda ceteris partibus.

Vero cum aliiquid sit exulcerandum saepe carenti ferramento, ut inutilis materia evocetur, illud est perpetuum, non, sanare ulcera hujus generis, primum ut potest fieri; sed trahere ea, donec id vitium, cui opitulamur per haec, conqiescat.

CAP. XXIII.

DE GENUUM DOLORE.

Coxis proxima genua sunt; in quibus ipsis nonnumquam dolor esse consuevit. In iisdem autem cataplasmati-
cucurbitulisque praesidium est: sicut etiam, cum in humeris, aliis commis-
suris dolor aliquis exortus est. Equitare ei, cui genua dolent, inimicissi-
mum omnium est. Omnes autem ejus-
modi dolores, ubi inveteraverunt, vix
citra ustionem finiuntur.

CHAP. XXIII.

OF A PAIN IN THE KNEES.

THE knees are next in succession to the hips: which are not unfrequently the seat of pain. But there is a remedy in the same cataplasms and cupping instruments: as also when a pain has arisen in the shoulders, or in the other joints. It is most inimical to him who has pain in the knee joints to ride on horseback. Now all pains of this kind, when they become chronic, are scarcely ever cured without the aid of the actual cautery.

TRANSLATION.

hands or feet. Such diseases rarely attack eunuchs or boys before they have intercourse with women, or females, unless the catamenia be suppressed.

When those pains are incipient, blood should be let immediately: for this being done immediately during the commencement often secures the patient good health for one year, sometimes for life. Some also have escaped this malady entirely, after having purified themselves by drinking ass's milk. Others have attained perpetual security from it, by restraining a whole year from wine, hydromel, and venery. This ought to be observed particularly after the first attack, even although it has subsided.

Bnt if the attacks have become habitual, a person may be less gndared against its return at those times in which it usnally remits: bnt he ought to employ greater care at the seasons of its recurrence, which generally happen in spring or autumn.

Now when the pain is oppressive, he ought to employ gestation in the morning; then to be carried, or to exercise himself by gentle walking, and if it be foot-gout, to walk and rest alternately, at short intervals; then, before he take food, without bathing, to be rubbed gently in a hot place, to perspire, to be put under a

mere ex media materia, interpositis rebus urinam moventibus; quotiesque plenior est, evomere.

Ubi dolor vehemens urget, interest, sine tumore is sit, an tumor cum calore, an tumor jam etiam obcalluerit. Nam si tumor nullus est, calidis fomentis opus est. Aquam marinam, vel muriam duram fervefacere oportet, deinde in pelvem conjicere, et, cum jam homo potest, pedes demittere, superque pallam dare, et vestimento tegere; paulatim deinde juxta labrum ipsum ex eadem aqua leniter infundere, ne calor intus destituat; ac deinde noctu cataplasma calefacientia imponere, maximeque hibisci radicem ex vino eoetam.

Si vero tumor calorique est, utiliora sunt refrigerantia, reeteque in aqua quam frigidissima articuli continentur; sed neque quotidie, neque diu, ne nervi laedantur. Imponendum vero est eataplasma, quod refrigeret: neque tamen in hoc ipso diu permanendum; sed ad ea transeundum, quae sic reprimunt, ut emollient.

Si major est dolor, papaveris cortices in vino coquendi, miscendique cum cerato sunt, quod ex rosa factum sit: vel

media materia, rebus moventibus urinam interpositis; que quoties est plenior, evomere.

Ubi vehemens dolor urget, interest, is sit sine tumore, an (est) tumor cum calore, an tumor jam etiam obcalluerit. Nam si est nullus tumor, est opus calidis fomentis. Oportet fervefacere marinam aquam, vel duram muriam, deinde conjicere in pelvem, et, cum jam homo potest demittere pedes, que dare pallam super, et tegere vestimento; deinde paulatim iufundere juxta labrum ipsum leniter ex eadcm aqua, ne calor destituat intus; ac deinde imponere calefacientia cataplasma noctu, que maxime radiem hibisci coctam ex vino.

Vero si est tumor que calor, refrigerantia sunt utiliora, que articuli continentur in quam frigidissima aqua recte; sed neque quotidie, neque diu, ne nervi laedantur. Vero cataplasmata quod refrigeret, est imponendum: neque tamen (est) permanendum diu in hoc ipso; sed (est) transeundum ad ea, quae sic repriment, ut emollient.

Si est major dolor, cortices papaveris coquendi in vino, que sunt miscendi cum cerato, quod sit factum ex rosa: vel cera et

TRANSLATION.

tepid shower bath (30); afterwards to take nourishment of the middle class, taking occasionally dinretics; and as often as he becomes plethoric, let him vomit.

When the attack is violent, it is of importance whether that be accompanied with swelling and heat, or without swelling, or whether the tumour has already grown callous. For if there be no tumour, there is an opportunity of applying hot fomentations. Sca-water or strong brine should be made hot, and poured into a basin, and wheu the patient can bear it, to put his feet in, and a cloak over them, then cover him up; then pour in gradually more of the same water, by the edge of the vessel, that there may be a sufficient heat kept up within; and afterwards apply calefacient cataplasms during the night, particularly marsh-mallow root boiled with wine.

But if there be swelling and heat, refrigerants are more useful, and then the joints are very properly to be kept in very cold water; but neither daily nor for a long time, lest the nerves may be injured. But a refrigerant cataplasm is to be laid on: even this must not be continued long, but to substitute some of those things which repress and soften at the saime time.

If the pain be more severe, the rind of poppies are to be boiled in wine and mixed with cerate composed of rose oil: or equal parts of wax and hog's lard

ceræ et adipis suillæ tantumdem una liquandum, deinde his vinum miscendum, atque ubi, quod ex eo impositum est, incaluit, detrahendum, et subinde aliud imponendum est.

Si vero tumorcs etiam obcalluerunt, et dolent, levat spongia imposta, quæ subinde ex oleo, et aceto, vel aqua frigida exprimitur; aut pari portione inter se mista pix, cera, alumen. Sunt etiam plura idonea manibus pedibusque malagmata.

Quod si nihil superimponi dolor patitur, id, quod sine tumore est, fovere oportet spongia, quæ in aquam calidam demittatur, in qua vel papaveris cortices, vel cucumeris silvestris radix decocta sit: tum inducere articulis crocum cum succo papaveris et ovillo lacte.

At si tumor est, foveri quidem debet aqua egelida, in qua lentiscus, aliave verbena ex reprimentibus decocta sit: induci vero medicamentum ex nucibus amaris cum aceto tritis; aut ex cerussa, cui contritæ herbæ muralis succus sit adjectus. Lapis etiam, qui carnem exedit, quem σαρκοφάγον Græci vocant, excisus, sic, ut pedes capiat, demissos eos, cum dolent, retentosque ibi levare consuevit. Ex quo in Asia lapidi Asio gratia est.

ORDO.

suillæ adipis tantumdem liquandum una, deinde vinum (est) miscendum his, atque ubi, quod est impositum ex eo, incaluit, (est) detrahendum, et aliud est imponendum subinde.

Vero si tumorcs etiam obcalluerunt, et dolent, spongia imposta levat, quæ subinde exprimitur ex aceto, et oleo, vel frigida aqua; aut pix, cera, alumen mista inter se pari portione. Etiam sunt plura idonea malagmata manibus que pedibus.

Quod si dolor patitur nihil superimponi, oportet fovere id, quod est sine tumore, spongia quæ demittatur in calidam aquam, in qua vel cortices papaveris, vel radix silvestris eneumeris sit decocta: tum inducere crocum articulis cum sneco papaveris et ovillo lacte.

At si est tumor, quidem debet foveri egelida aqua, in qua lentiseus, ve alia verbena ex reprimentibus sit decocta: vero medicamentum ex amaris nucibus tritis cum aceto induci; aut ex cerussa, cui succus contritæ muralis herbæ sit adjectus. Etiam lapis, qui exedit carnem, quem Græci vocant σαρκοφάγον (sarcophagus), excisus, sie, ut capiat pedes, eos demissos, que retentos ibi consuevit levare, cum dolent. Ex quo in Asia est gratia Asio lapidi.

TRANSLATION.

melted together, then wine mixed with these, and when an application of this has grown hot, it is to be removed occasionally, and another substituted.

But if the tumours have become indurated and painful, the application of a sponge dipped occasionally in oil and vinegar, or cold water, gives relief; or equal parts of pitch, wax, and alum mixed together. There are also many malaguata proper for the hands and feet.

But if the pain will not admit of any thing to be laid on, that part which is not swollen should be fomented with a sponge dipped in a hot decoction of poppy bark, or of wild enenmber root; then to apply saffron with poppy juice and sheeps' milk to the joints.

If there be swelling, that should be fomented with a tepid decoction of mastich, vervains, or any other astringent: also a medicament composed of bitter almonds bruised with oil should be applied; or ceruss, to which the juice of the bruised wall herb may be added. That stone also which corrodes the flesh, and by the Greeks termed sarcophagus (31), cut out in such a manner as to receive the feet, generally relieves them, when they are put into it and retained there. From which circumstance, in Asia, the Asian stone is held in great repute.

Ubi dolor et inflammatio se remiserunt (quod intra dies quadraginta fit, nisi vitium hominis accessit) modicis exercitationibus, abstinentia, unctionibus lenibus utendum est, sic, ut etiam acopo, vel liquido cerato cyprino articuli perfrirentur. Equitare podagrericis quoque alienum est.

Quibus vero articulorum dolor certis temporibus revertitur, hos ante et curioso victu cavere oportet, ne inutilis materia corpori supersit, et crebriore vomitu; et, si quis ex corpore metus est, vel alvi ductione uti, vel lacte purgari. Quod Erasistratus in podagrericis expulit, ne in inferiores partes factus cursus pedes repleret: cum evidens sit, omni purgatione non superiora tantummodo, sed etiam inferiora exinaniri.

ORDO.

Ubi dolor et inflammatio remiserunt se (quod fit intra quadraginta dies, nisi vitium hominis accessit) est utendum modicis exercitationibus, abstinentia, lenibus unctionibus, sic, ut etiam articuli perfrirentur aeopo, vel liquido cyprino cerato. Quoque equitare est alienum podagrericis.

Vero quibus dolor articulorum revertitur certis temporibus, oportet hos cavere ante et curioso victu, ne inutilis materia supersit corpori, et crebriore vomitu; et, si est quis metus ex corpore, vel uti ductione alvi, vel purgari lacte. Quod Erasistratus expulit in podagrericis, ne cursus factus in inferiores partes repleret pedes: cum sit evidens, non tantummodo superiora exinaniri omni purgatione, sed etiam inferiora.

TRANSLATION.

When the pain and inflammation have remitted, (which happens within forty days, unless the patient has been at fault,) he should employ moderate exercises, abstinence, gentle unctious, so that the joints also may be rubbed with aeopm(32), or with liquid cyprine cerate. Riding also is improper for those who have gout in their feet.

Those who have periodical returns of these affections of the joints, ought to be on their guard, lest an injurious redundancy abound in the system, both by a more rigid regimen, and by more frequent vomiting; and if there be any apprehension arising from the state of the body, to use either injections, or milk purgatives: which Erasistratus has rejected in the treatment of persons afflicted with gout in the feet, lest a revulsion of the humours downwards might cause a redundancy in the lower extremities: although it is evident, that, not only the superior parts, but also the inferior are depleted by every kind of purgative.

CAP. XXV.

DE REFECTIONE CONVALESCENTIUM
A MORBO.

Ex quoemque autem morbo quis convalescit, si tarde confirmatur, vigilare prima luce debet; nihilominus in lecto conquiescere: eirea tertiam horam leniter unetis manibus corpus permulgere: deinde delectationis causa, quantum juvat, ambulare, circumseisa omni negotiosa actione: tum gestari diu: multa frictione uti: loca, cælum, cibos sæpe mutare: ubi triduo quatriduove vinum bibit, uno aut etiam altero die interponere aquam. Per hæc enim fiet, ne in vitia tabem inferentia incidat, et ut mature vires suas recipiat.

Cum vero ex toto convaluerit, periculose vitæ genus subito mutabit, et inordinate ager. Paulatim ergo debebit, omissis his legibus, eo transire, ut arbitrio suo vivat.

TRANSLATION.

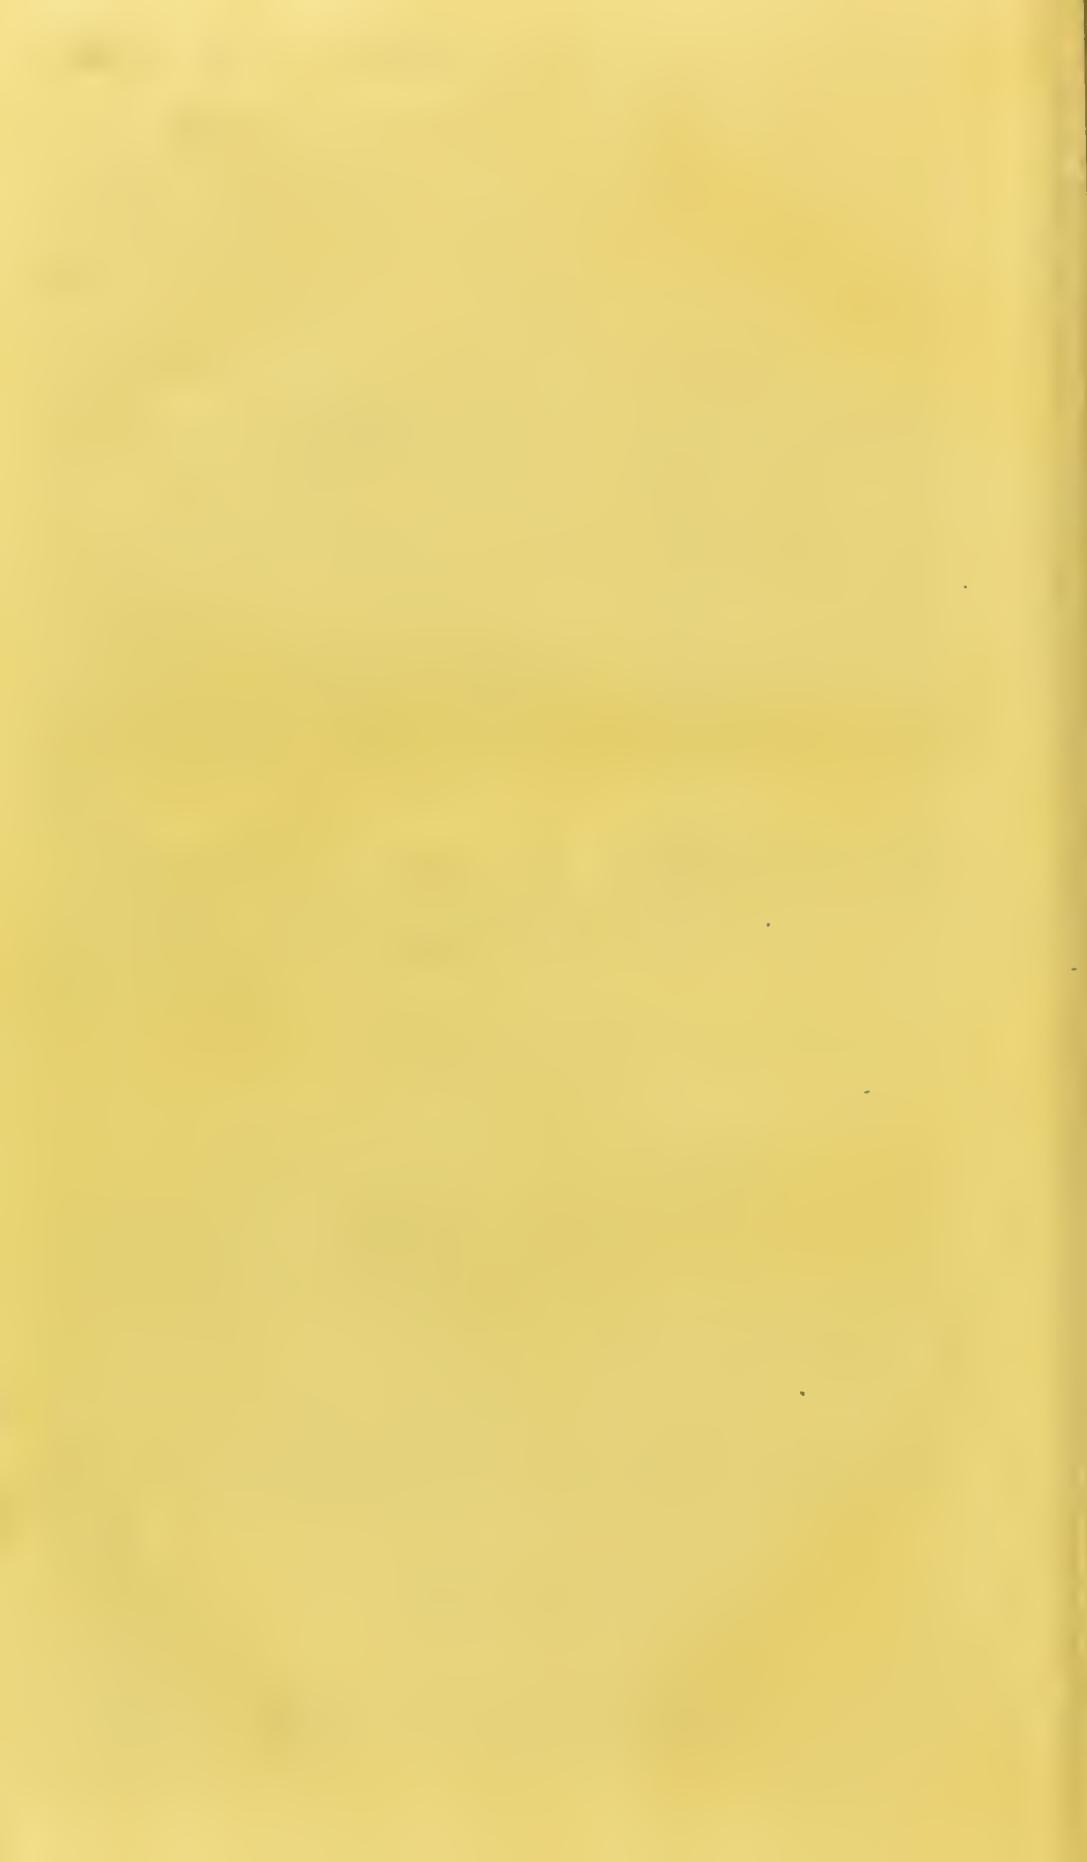

CHAP. XXV.

THE TREATMENT OF CONVALESCENTS.

FROM whatever disease a patient may be recovering, if his improvement be tardy, he ought to awake at the dawn of day; nevertheless to rest in bed: about the third hour to rub the body gently with anointed hands; then to walk as far as it may be agreeable, for the sake of reereation, setting all busiess aside; then to use gestation for a considerable time: to apply much friction; a frequent change of residence, air, and diet: when he has drunk wine for three or four days, let him take water for one or two. For by these means, he will not only evade the predisposing causes of consumption, but sooner recover his strength.

But when he is entirely recovered, any sudden change of life, or irregularity of action, is not unattended with danger. Therefore he ought to lay aside those restraints gradually in his transition to that state, in which he may live without control.
